QUESTION 1

Storage capabilities be populated in what two ways? (Choose two.)

- A. Datastores can advertise their capabilities through VASA.
- B. Datastores can advertise their capabilities through VAAI.
- C. The administrator can use tags to describe capabilities.
- D. Default capabilities are provided by vCenter Server.

Correct Answer: AC

QUESTION 2

Which are two true statements for cloning items across content libraries?

- A. Items cannot be cloned if subscriber libraries are not synchronized
- B. Items can be cloned only across published libraries
- C. Items can have a subscribed library as source but not as destination
- D. Items can be cloned across libraries in the same vCenter Server Instance.

Correct Answer: AD

QUESTION 3

A vSphere Administrator must ensure that a user is able to view and manage the system configuration in vSphere Web Client.

In the vCenter Single Sign-On domain, which group should the user be a part of?

- A. SystemConfiguration. Administrators
- B. Administrators
- C. ComponentManager. Administrators
- D. SystemConfiguration. BashShellAdministrators

Correct Answer: A

<https://pubs.vmware.com/vsphere-60/index.jsp?topic=%2Fcom.vmware.vsphere.security.doc%2FGUID87DA2F34-DCC9-4DAB-8900-1BA35837D07E.html>

**QUESTION 4**

vCenter Server Appliance Instance can be backed up using which Client Interface?

- A. vSphere Client Interface
- B. Virtual Appliance Management Interface
- C. vSphere Web Client Interface
- D. VMware Host Client Interface

Correct Answer: B

QUESTION 5

An administrator finds that the Microsoft Exchange virtual machines are exhibiting network latency. What two in-guest changes can help decrease latency? (Choose two.)

- A. PVDRMA
- B. TSO
- C. SR-IOV
- D. LRO

Correct Answer: BD

Using TSO and LRO on physical and virtual machine NICs improves the performance of ESX/ESXi hosts by reducing the CPU overhead for TCP/IP network operations. The host uses more CPU cycles to run applications. If TSO is enabled on the transmission path, the NIC divides larger data chunks into TCP segments. If TSO is disabled, the CPU performs segmentation for TCP/IP. TSO is referred to as LSO (Large Segment Offload or Large Send Offload) in the latest VMXNET3 driver attributes. LRO reassembles incoming network packets into larger buffers and transfers the resulting larger but fewer packets to the network stack of the host or virtual machine. The CPU has to process fewer packets than when LRO is disabled, which reduces its utilization for networking.
