-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

When designing a large, high-availability wireless network, what changes to a mobility-group would create less load on the controllers while maintaining the same mobility messages?

- A. remove unnecessary controllers from the mobility-group to cut down on the controller's messaging load
- B. separate the controllers into different mobility-groups per controller to only send relevant messaging to controllers in different groups
- C. configure mobility-group multicast messaging
- D. configure the controllers into separate RF-Groups from the mobility-groups to cut down on controller processing load

Correct Answer: C

QUESTION 2

A network has two Cisco WLCs and two Layer 3 gigabit Ethernet switches. The customer requires two gigabit connections from each Cisco WLC to each of the switches that have copper RJ-45 gigabit ports. What two additional hardware are needed to connect the Cisco WLCs to the network? (Choose two.)

- A. Four straight-through Ethernet cables
- B. Layer 3 switching module in each of the Cisco WLCs
- C. Four copper SFPs must be added to the kit list
- D. Two console cables
- E. Four rollover Ethernet cables

Correct Answer: AC

QUESTION 3

A customer wants to upgrade their current wireless infrastructure to support wireless voice capabilities. When using a voice readiness assessment tool, the customer notes that multiple areas have failed to meet the requirements. How should the customer resolve this issue?

- A. Reduce the maximum threshold on the voice readiness tool to -67 dBm.
- B. Perform a site survey to position access points in the facility.
- C. Ensure that there is a 1 to 5 ratio of monitor mode to local mode access points
- D. Increase the power on all the access points to 25mW or more.

Correct Answer: A

<https://www.cisco.com/c/en/us/td/docs/solutions/Enterprise/Mobility/WiFiLBS-DG/wifich5.html>

**QUESTION 4**

A network engineer is configuring QoS with a DSCP value of 46. To which queue must the CoS be mapped for priority queuing of the voice frames?

- A. 1
- B. 2
- C. 5
- D. 4
- E. 3

Correct Answer: C

QUESTION 5

A customer is having issues streaming video over wireless in a few high-density areas of their campus. After further investigation, the administrator has singled out the issue pertains to the clients associated to 802.11b/g only access points. The rest of the campus is covered in 802.11n access points. What is a possible reason for the issue with video streaming on the 802.11b/g access points as opposed to the 802.11n access points?

- A. Due to the High-Density environment, there was high-utilization of the wireless spectrum. With 802.11n, the access points are able to aggregate the MSDU and MPDU frames into A-MSDU and A-MPDU frames, utilizing less airtime to transfer data.
- B. The wireless clients were all transmitting at 802.11b data rates and would have operated properly had they been transmitting and receiving at 802.11g rates.
- C. The clients could not transmit data at the highest mandatory rate of 54 Mbps due to limitations with 802.11b/g. This data-rate is only possible when transmitting at 802.11n speeds.
- D. The wireless controller was denying the client access to the video due to multicast-direct supporting the PHY rate of 48000 that the 802.11b/g client could not handle.

Correct Answer: A
