The CIO of a company wants to start tracking inventory in the warehouse using RFID tags and their existing wireless network.

The company hires a wireless engineer to ensure that their existing network can support this new initiative. Which tool in Cisco Prime can help the wireless engineer?

- A. Planning Mode
- B. Map Editor
- C. Site Survey
- D. Location Readiness

Correct Answer: D

Using Chokepoints to Enhance Tag Location Reporting Installation of chokepoints provides enhanced location information for RFID tags. When an active Cisco-compatible Extensions Version 1-compliant RFID tag enters the range of a chokepoint, it is stimulated by the chokepoint. The MAC address of this chokepoint is then included in the next beacon sent by the stimulated tag. All access points that detect this tag beacon then forward the information to the controller and location appliance.
