**QUESTION 1**

After some changes in the routing policy, it is noticed that the router in AS 45123 is being used as a transit AS router for several service providers. Which configuration ensures that the branch router in AS 45123 advertises only the local networks to all SP neighbors?

A)

```
ip as-path access-list 1 permit ^45123
|
router bgp 45123
neighbor SP-Neighbors filter-list 1 out
```

B)

```
ip as-path access-list 1 permit ^
|
router bgp 45123
neighbor SP-Neighbors filter-list 1 out
```

C)

```
ip as-path access-list 1 permit ^45123$
|
router bgp 45123
neighbor SP-Neighbors filter-list 1 out
```

D)

```
ip as-path access-list 1 permit ^$
|
router bgp 45123
neighbor SP-Neighbors filter-list 1 out
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: D

By default BGP advertises all prefixes to external BGP neighbors. This means that if you are multi-homed (connected to two or more ISPs) then you might become a transit AS. For example, ISP 2 in AS 200 can send traffic to your router in AS 100 to reach ISP 3 in AS 300 because you advertised prefixes in ISP 3 to ISP 2.

### QUESTION 2

Which attribute eliminates LFAs that belong to protected paths in situations where links in a network are connected through a common fiber?

- A. shared risk link group-disjoint
- B. linecard-disjoint
- C. lowest-repair-path-metric
- D. interface-disjoint

Correct Answer: B

Reference: [https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/iproute\\_eigrp/configuration/xe-3s/asr1000/ire-xe-3s-asr1000/ire-ipfrr.html](https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/iproute_eigrp/configuration/xe-3s/asr1000/ire-xe-3s-asr1000/ire-ipfrr.html)

---

### QUESTION 3

Which protocol is used in a DMVPN network to map physical IP addresses to logical IP addresses?

- A. BGP
- B. LLDP
- C. EIGRP
- D. NHRP

Correct Answer: D

---

### QUESTION 4

Which is statement about IPv6 inspection is true?

- A. It teams and secures bindings for stateless autoconfiguration addresses in Layer 3 neighbor tables
- B. It learns and secures bindings for stateful autoconfiguration addresses in Layer 3 neighbor tables
- C. It teams and secures bindings for stateful autoconfiguration addresses in Layer 2 neighbor tables
- D. It team and secures binding for stateless autoconfiguration addresses in Layer 2 neighbor tables.

Correct Answer: D

---

### QUESTION 5

DRAG DROP Refer to the exhibit.

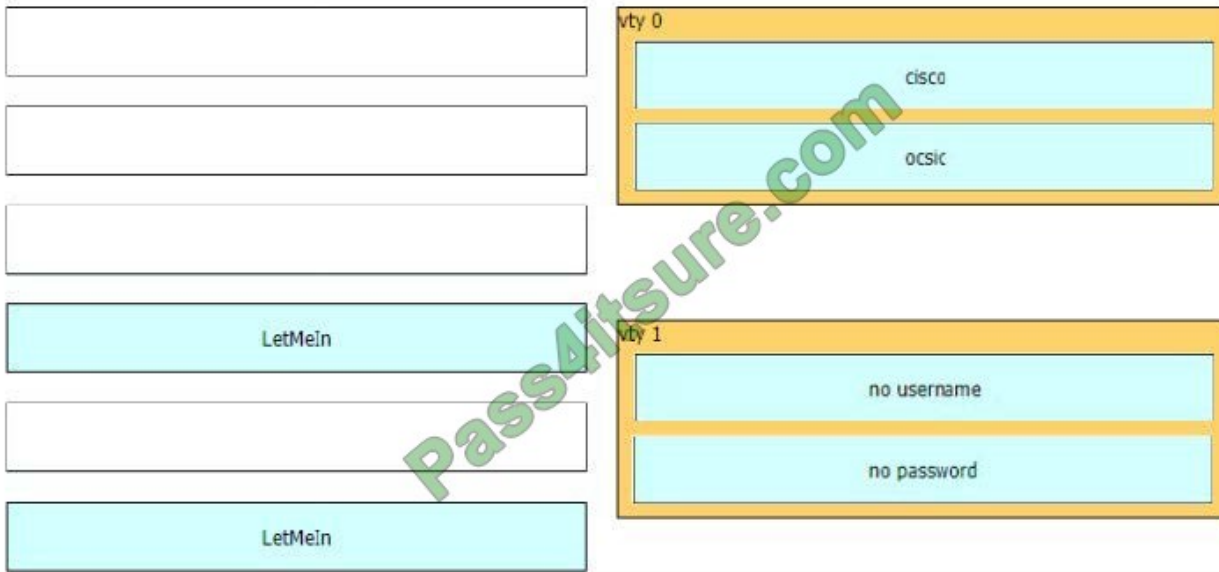

```
aaa new-model
aaa authentication login default none
aaa authentication login telnet local
!
username cisco password 0 ccsic
!
line vty 0
password LetMeIn
login authentication telnet
transport input telnet
line vty 1
password LetMeIn
transport input telnet
```

Drag and drop the credentials from the left onto the remote login information on the right to resolve a failed login attempt to vty. Not all credentials are used

Select and Place:

no password	vty 0 username password
ocsic	
no username	vty 1 username password
LetMeIn	
cisco	
LetMeIn	

Correct Answer:

vty 0:

+

cisco

+

Ocsic

vty 1:

+

no username

+

no password

The command “aaa authentication login default none” means no authentication is required when access to the device via Console/VTY/AUX so if one interface does not specify another login authentication method (via the “login authentication ...” command), it will allow to access without requiring username or password. In this case VTY 1 does not specify another authentication login method so it will use the default method (which is “none” in this case).
