QUESTION 1

A customer has deployed a new e-commerce application that is hosted in a private cloud. The application is used globally on a 24-hour basis. The customer wants to ensure that user transactions do not negatively affect website performance and wants to prevent loss of service due to traffic load.

Which two actions will harden the web environment? (Choose two.)

A. Implement a web application firewall

B. Use antivirus software to protect the application web server

C. To maintain communication, ensure that the web application is on the same LAN as the other servers

D. To protect form malicious attacks, avoid a public-facing application

E. Use a DDoS appliance to protect the application

Correct Answer: AE

QUESTION 2

Drag and drop each storage type on the left onto the correct description on the right.

Select and Place:

CIFS		deployed over specialized switches to send SCSI commands and provide a server with block-level access to storage devices over a lossless fabric
NFS		allows a user to view, store, and update files on a remote server; is a client/server protocol developed and used by Microsoft
iSCSI		deployed over TCP/IP to send SCSI commands and provide a server with block-level access to storage devices over a local or wide-area network
FC		encapsulates Fibre Channel frames into native Ethernet networks
FCoE		allows a user to view, store, and update files on a remote server; is a client/server protocol originally developed by Sun Microsystems

Correct Answer:

	FC
	CIFS
	iSCSI
	FCoE
	NFS

QUESTION 3

ABC Company offers services that are tailored for different vertical markets. They want to use Software-as-a-Service but they are concerned abort security. Which cloud type is best for them?

A. private cloud

B. hybrid cloud

C. public cloud

D. community cloud

Correct Answer: B

QUESTION 4

Which three options describe how isolation can be achieved for VMDC data center security? (Choose three.)

A. access control lists

B. intrusion prevention appliances that inspect traffic and detect security events on a -VLAN basis

C. proper infrastructure hardening

D. role-based access and authentication

E. application redundancy

F. policy enforcement and access control

G. virtual routing and forwarding tables

Correct Answer: ABG

Isolation provides a secure foundation for multi-tenant data centers and server farms. Depending on the design goals, isolation can be achieved using firewalls; access control lists (ACLs); virtual LANs (VLANs), Virtual Routing and Forwarding tables (VRFs), virtualization, storage networks, and physical separation. In addition, Intrusion Prevention appliances that can inspect traffic and detect security events on a per-VLAN basis can provide an additional level of threat isolation between different tenants. When combined, these can provide appropriate levels of security enforcement to server applications and services for multiple tenants.

QUESTION 5

An engineer is constructing a hybrid cloud solution for a customer and wants to ensure cloud visibility. Which two components are part of identification? (Choose two.)

A. network management

B. firewall/deep packet inspection

C. event analysis and correlation

D. digital certificates

E. network flow data collection

Correct Answer: BC
