**QUESTION 1**

How is call Admission Control enabled for Session Manager Release 6.1?

- A. Call Admission Control is enabled in the SIP Entity by specifying a value for Managed Bandwidth.
- B. Call Admission Control is enabled on the Session Manager instance by specifying a value for Managed Bandwidth.
- C. Call Admission Control is enabled on a Location by specifying a value for Managed Bandwidth.
- D. Call Admission Control is enabled on an Entity Link specifying a value for Managed Bandwidth on the Locations screen in Session Manager.

Correct Answer: D

QUESTION 2

A new Application Sequence has already been defined in the network. A technician has been asked to apply Application Sequence to all incoming calls for all employees in the Berlin office. Which sequence describes the steps that should be taken?

- A. Go to the User Management page and use the filter option to list only the users in the Berlin office-Select each user from the filtered list and edit each user's User Profile. Apply the new Application Sequence to the Terminating Application Sequence for each user.
- B. Navigate to the Communication Profile Editor and use the filter option to list only the users in the Berlin location. Select All. Select the new Application Sequence from the Terminating Application Sequence drop down box.
- C. Go to the list of Application Sequences and edit the new Application Sequence, adding the Berlin location to the list of associated locations.
- D. Edit the Berlin Location to include the new Application Sequence as its Terminating Application Sequence.

Correct Answer: B

QUESTION 3

Which two statements about backing up System Manager (SMGR) product and user profile data are true? (Choose two)

- A. It is used when moving user details from one SMGR to another SMGR in the Avaya Aura eco- system.
- B. It is made to a file location, either on or off the SMGR server.
- C. It is made to preserve user and other configuration data during a SMGR upgrade.
- D. It is used later when attempting to restore role definitions that may have become corrupted without affecting other configuration changes made after the backup was taken.

Correct Answer: BC
