**QUESTION 1**

A System Manager (SMGR) product administrator needs to perform some routine maintenance on an Avaya product in their network. Although they can successfully log in to SMGR, they do not have access to the menu they require in the navigation panel. Which action must be taken?

- A. Make sure that the administrator has been assigned to a suitable group.
- B. Make sure that the administrator is not logged in at a different browser.
- C. Ensure that the administrator's authentication type is set to 'enterprise' so that SMGR can retrieve permissions from the active directory server.
- D. Check that the administrator has been assigned an appropriate role.

Correct Answer: D

QUESTION 2

Session Manager has a routing policy that routes calls made to any number beginning with '100' to SIP Entity X. However, 'sip.-1001avaya.com' is the SIP communication profile address of user Y. User Y is not currently registered (signed in) with Session Manager. What will happen if Session Manager receives a call addressed to 'sip.-1001avaya.com' and why?

- A. It depends on the time ranges of the policy. If the call is placed inside a defined time range for the policy, the call will be routed to destination X. If not, then Session Manager will attempt to route the call to user Y. Since Y is not registered, the call will timeout, and the call will fail.
- B. Since user Y is not currently registered, the call will be handled by the routing policy. If the call is placed during a time range specified by the policy, then the call will be routed to destination X.
- C. If not, then the call will fail.
- D. Since the destination URI matches a communication profile SIP handle, Session Manager will not use the routing policy in handling the call. The call will fail since user Y is not currently registered.
- E. Since the destination URI matches a routing policy dial pattern, Session Manager will give no consideration to the user Y registration status. If the call is made during a time range for the policy, the policy will be applied and the call will be routed to destination X. If not, then the original URI of 'sip.-1001avaya.com' will be used as the destination to which Session Manager will route the call.

Correct Answer: C

QUESTION 3

Application definitions allow system administrators to define and manage individual applications each with their own attributes. The definitions allow administrators to add one or more such applications to which of the following?

- A. application programs
- B. application data sets

C. application sequences

D. application lists

Correct Answer: C

QUESTION 4

What is the benefit of using the Communication Profile Editor to modify users?

A. It allows an administrator to change some values of a User Profile for multiple SIP users at one time.

B. It allows an administrator to change the values of the Session Manager Profile settings for only a single SIP System Manager user at one time.

C. It allows an administrator to change some values of the Communication Profile settings for multiple SIP System Manager Users at one time.

D. It allows an administrator to change all values of a User Profile for multiple users at one time.

Correct Answer: B

QUESTION 5

After a power failure or database crash, the Postgres database may become corrupted and the Postgres server may not restart. The recovery action is to clear the writer-Ahead Log (WAL) and optionally reset other control data, using which command?

A. pg_resetxlog

B. pg_clearwal

C. pg_dump

D. service postgresq1 restart

E. service wall restart

Correct Answer: A
