**QUESTION 4**

An organization is trying to improve their Defense in Depth by blocking malicious destinations prior to a connection being established. The solution must be able to block certain applications from being used within the network. Which product should be used to accomplish this goal?

- A. Cisco Firepower
- B. Cisco Umbrella
- C. ISE
- D. AMP

Correct Answer: B

Cisco Umbrella protects users from accessing malicious domains by proactively analyzing and blocking unsafe destinations before a connection is ever made. Thus it can protect from phishing attacks by blocking suspicious domains when users click on the given links that an attacker sent.

QUESTION 5

An organization recently installed a Cisco WSA and would like to take advantage of the AVC engine to allow the organization to create a policy to control application specific activity. After enabling the AVC engine, what must be done to implement this?

- A. Use security services to configure the traffic monitor, .
- B. Use URL categorization to prevent the application traffic.
- C. Use an access policy group to configure application control settings.
- D. Use web security reporting to validate engine functionality

Correct Answer: C

The Application Visibility and Control (AVC) engine lets you create policies to control application activity on the network without having to fully understand the underlying technology of each application. You can configure application control settings in Access Policy groups. You can block or allow applications individually or according to application type. You can also apply controls to particular application types.
