**QUESTION 1**

Refer to the exhibit.

```
import requests

client_id = 'a1b2c3d4e5f6g7h8i9j0'

api_key = 'a1b2c3d4-e5f6-g7h8-i9j0-k1l2m3n4o5p6'
```

What does the API key do while working with <https://api.amp.cisco.com/v1/computers?>

- A. displays client ID
- B. HTTP authorization
- C. Imports requests
- D. HTTP authentication

Correct Answer: D

---

**QUESTION 2**

Which attack is commonly associated with C and C++ programming languages?

- A. cross-site scripting
- B. water holing
- C. DDoS
- D. buffer overflow

Correct Answer: D

A buffer overflow (or buffer overrun) occurs when the volume of data exceeds the storage capacity of the memory buffer. As a result, the program attempting to write the data to the buffer overwrites adjacent memory locations. Buffer overflow is a vulnerability in low level codes of C and C++. An attacker can cause the program to crash, make data corrupt, steal some private information or run his/her own code. It basically means to access any buffer outside of its allotted memory space. This happens quite frequently in the case of arrays.

---

**QUESTION 3**

What is a feature of container orchestration?

- A. ability to deploy Amazon ECS clusters by using the Cisco Container Platform data plane
- B. ability to deploy Amazon EKS clusters by using the Cisco Container Platform data plane
- C. ability to deploy Kubernetes clusters in air-gapped sites
- D. automated daily updates

Correct Answer: C

---

#### QUESTION 4

An organization is selecting a cloud architecture and does not want to be responsible for patch management of the operating systems. Why should the organization select either Platform as a Service or Infrastructure as a Service for this environment?

- A. Platform as a Service because the customer manages the operating system
- B. Infrastructure as a Service because the customer manages the operating system
- C. Platform as a Service because the service provider manages the operating system
- D. Infrastructure as a Service because the service provider manages the operating system

Correct Answer: C

<https://www.cisco.com/c/en/us/solutions/cloud/what-is-cloud-computing.html#~cloud-computing-services>

---

#### QUESTION 5

What is the role of Cisco Umbrella Roaming when it is installed on an endpoint?

- A. To protect the endpoint against malicious file transfers
- B. To ensure that assets are secure from malicious links on and off the corporate network
- C. To establish secure VPN connectivity to the corporate network
- D. To enforce posture compliance and mandatory software

Correct Answer: B

Umbrella Roaming is a cloud-delivered security service for Cisco's next-generation firewall. It protects your employees even when they are off the VPN.
