**QUESTION 1**

An engineer has enabled LDAP accept queries on a listener. Malicious actors must be prevented from quickly identifying all valid recipients. What must be done on the Cisco ESA to accomplish this goal?

- A. Configure incoming content filters
- B. Use Bounce Verification
- C. Configure Directory Harvest Attack Prevention
- D. Bypass LDAP access queries in the recipient access table

Correct Answer: C

A Directory Harvest Attack (DHA) is a technique used by spammers to find valid/existent email addresses at a domain either by using Brute force or by guessing valid e-mail addresses at a domain using different permutations of common

username. Its easy for attackers to get hold of a valid email address if your organization uses standard format for official e-mail alias (for example:

jsmith@example.com). We can configure DHA Prevention to prevent malicious actors from quickly identifying valid recipients. Note: Lightweight Directory Access Protocol (LDAP) is an Internet protocol that email programs use to look up

contact information from a server, such as ClickMail Central Directory. For example, here's an LDAP search translated into plain English: "Search for all people located in Chicago who's name contains "Fred" that have an email address.

Please return their full name, email, title, and description.

QUESTION 2

What are two reasons for implementing a multifactor authentication solution such as Duo Security provide to an organization? (Choose two)

- A. flexibility of different methods of 2FA such as phone callbacks, SMS passcodes, and push notifications
- B. single sign-on access to on-premises and cloud applications
- C. integration with 802.1x security using native Microsoft Windows supplicant
- D. secure access to on-premises and cloud applications
- E. identification and correction of application vulnerabilities before allowing access to resources

Correct Answer: AD

Two-factor authentication adds a second layer of security to your online accounts. Verifying your identity using a second factor (like your phone or other mobile device) prevents anyone but you from logging in, even if they know your password. Note: Single sign-on (SSO) is a property of identity and access management that enables users to securely authenticate with multiple applications and websites by logging in only once with just one set of credentials (username and password). With SSO, the application or website that the user is trying to access relies on a trusted third party to verify that users are who they say they are.

QUESTION 3

Which suspicious pattern enables the Cisco Tetration platform to learn the normal behavior of users?

- A. file access from a different user
- B. interesting file access
- C. user login suspicious behavior
- D. privilege escalation

Correct Answer: C

QUESTION 4

Refer to the exhibit.

An engineer is implementing a certificate based VPN. What is the result of the existing configuration?

- A. Only an IKEv2 peer that has an OU certificate attribute set to MANGLER establishes an IKEv2 SA successfully.
- B. The OU of the IKEv2 peer certificate is used as the identity when matching an IKEv2 authorization policy.
- C. The OU of the IKEv2 peer certificate is set to MANGLER.
- D. The OU of the IKEv2 peer certificate is encrypted when the OU is set to MANGLER.

Correct Answer: B

QUESTION 5

An engineer is configuring IPsec VPN and needs an authentication protocol that is reliable and supports ACK and sequence. Which protocol accomplishes this goal?

- A. AES-192
- B. IKEv1
- C. AES-256

D. ESP

Correct Answer: D
