-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

An engineer needs a solution for TACACS+ authentication and authorization for device administration. The engineer also wants to enhance wired and wireless network security by requiring users and endpoints to use 802.1X, MAB, or WebAuth. Which product meets all of these requirements?

- A. Cisco Prime Infrastructure
- B. Cisco Identity Services Engine
- C. Cisco Stealthwatch
- D. Cisco AMP for Endpoints

Correct Answer: B

---

**QUESTION 2**

An sneaky employee using an Android phone on your network has disabled DHCP, enabled it's firewall, modified it's HTTP User-Agent header, to tool ISE into profiling it as a Windows 10 machine connected to the wireless network. This user

is now able to get authorization for unrestricted network access using his Active Directory credentials, as your policy states that a Windows device using AD credentials should be able to get full network access. Whereas, an Android device

should only get access to the Web proxy.

Which two steps can you take to avoid this sort of rogue behavior? (Choose two)

- A. Create an authentication rule that should only allow session with a specific HTTP User-Agent header
- B. Modify the authorization policy to only allow Windows machines that have passed Machine Authentication to get full network access
- C. Add an authorization policy before the Windows authorization policy that redirects a user with a static IP to a web portal for authentication
- D. Chain an authorization policy to the Windows authorization policy that performs additional NMAP scans to verify the machine type, before allowing access
- E. Only allow certificate-based authentication from Windows endpoints, such as EAP-TLS or PEAP- TLS.Should the endpoint use MSCHAPv2 (EAP or PEAP), the user should be only given restricted access
- F. Perform CoA to push a restricted access when the machine is acquiring address using DHCP

Correct Answer: BE

---

**QUESTION 3**

Which two prevention techniques are used to mitigate SQL injection attacks? (Choose two.)

- A. Check integer, float, or Boolean string parameters to ensure accurate values.
- B. Use prepared statements and parameterized queries.
- C. Secure the connection between the web and the app tier.
- D. Write SQL code instead of using object-relational mapping libraries.
- E. Block SQL code execution in the web application database login.

Correct Answer: AB

#### QUESTION 4

A network engineer is configuring DMVPN and entered the crypto isakmp key cisc0380739941 address 0.0.0.0 command on host A. The tunnel is not being established to host B.

What action is needed to authenticate the VPN?

- A. Enter the same command on host B.
- B. Enter the command with a different password on host B.
- C. Change isakmp to ikev2 in the command on host A.
- D. Change the password on host A to the default password.

Correct Answer: A

---

#### QUESTION 5

Which PKI enrollment method allows the user to separate authentication and enrollment actions and also provides an option to specify HTTP/TFTP commands to perform file retrieval from the server?

- A. url
- B. profile
- C. terminal
- D. selfsigned

Correct Answer: A
