**QUESTION 1**

Which statement describes a step in provisioning SPBM in an enterprise network?

- A. Configure IP addresses on the core links.
- B. Enable SPBM and IS-IS globally on all nodes and on the core facing links.
- C. Configure the MAC table.
- D. Configure L2 and L3 VSNs on the core SPBM nodes.

Correct Answer: B

QUESTION 2

Routed Split Multi-Link Trunking (RSMLT) is a way to ensure that traffic can be routed off the VLAN by adding router redundancy. When configuring the Ethernet Routing Switch (ERS) core switches, where is RSMLT configured?

- A. An OSPF protocol
- B. A core switch port
- C. A VLAN
- D. An edge switch port

Correct Answer: A

QUESTION 3

A technician is implementing a new network that contains eight Ethernet routing switch (ERS) 8600 switches and uses advanced features. Where are two possibilities for generating license? (Choose two)

- A. one individual advanced feature license for each ERS 8600 chassis
- B. one multi-chassis license using multiple MAC addresses
- C. one advanced feature license for the network
- D. one premier feature license for the network
- E. one site license per ERS 8600

Correct Answer: CE

QUESTION 4

A technician has installed a license file on the Ethernet routing switch (ERS) 8800 and rebooted, but cannot configure

the associated licensed features. it has been determined that license did not load properly at bootup time.

Which two must be verified?

- A. The switch is at the current release.
- B. The license filename contains valid characters.
- C. The license file is stored in the flash directory
- D. The appropriate license level has been obtained.
- E. The license file has .dat extension.

Correct Answer: BE

QUESTION 5

On Ethernet Routing Switch (ERS) 8300 configurations, which service class ensures that protocol updates such as RIP and OSPF are able to get out of a heavily congested switch?

- A. Bronze
- B. Standard
- C. Network Control
- D. Premium Control

Correct Answer: C
