**QUESTION 1**

Development team members would like to build new virtual machines using vRealize Orchestrator workflow.

They would also like them to be added automatically to DNS prior to initial start. The domain administration team is responsible for DNS and requires review of any DNS entry requests prior the creation of new machines.

Which design will satisfy these requirements?

- A.
 - Design an Event Broker subscription for the machine using the CloneWorkflow.BuildComplete Provisioning State name.
 - Design a post-approval for the XaaS component that is assigned to the development team requiring authorization to process the XaaS workflow.
- B.
 - Design an Event Broker subscription for the machine using the CloneWorkflow.InitialPowerOn Provisioning State name.
 - Design a pre-approval for the Event Broker subscription that is assigned to the development team requiring authorization to process the XaaS workflow.
- C.
 - Design an XaaS workflow for adding the machines to DNS and add it to the development catalog.
 - Design a post-approval for the machine that is assigned to the domain administration team requiring authorization to build the machine.
- D.
 - Design an XaaS workflow for adding the machines to DNS and add it to the blueprint.
 - Design an pre-approval for the machine that is assigned to the domain administration team requiring authorization to build the machine.

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A

QUESTION 2

A company has a main office, three regional offices, and six branches offices. The network links are configured as shown in the exhibit. View the Exhibit:

During information gathering, an architect records: The regional offices are located in secure bunkers. The CTO feels this would be a good location for all the vRealize Automation components to meet their BC/DR objectives. However, the CTO is looking for the best design while maintaining their very high security requirements. The branch offices are located in very remote locations with unpredictable network performance. Reliance on the main and regional offices needs to be minimal while still allowing provisioning of machines in the branch offices. The branch offices consist of three host vSphere clusters. There is synchronous vSphere Metro Storage Cluster (vMSC) between the regional offices as well as replicated backups between the regional offices with replication running nightly. The CEO wants to have the lowest possible RPO and RTO of the vRealize portal including the ability to manage already provisioned machines while NOT increasing the amount of data being replicated between the regional offices as much as possible. Referring to the exhibit, which two design specifications can the architect recommend to meet requirements? (Choose two.)

- A. distributed vRealize Automation management solution in the main office
- B. vSphere agents in each of the branch offices
- C. distributed vRealize Automation management solution in each of the regional offices
- D. distributed vRealize Automation management solution across the regional offices
- E. vSphere agents in the regional offices that manage the regional and branch offices

Correct Answer: DE

QUESTION 3

An architect for a vRealize Automation (vRA) deployment project has met with the IT team and gathered the following requirements:

1. Automated 30-day power off and archive
2. 99.99% SLA of the custom portal
- 3.

Utilize built-in functionality

4.

Microsegmentation

5.

API calls to vRA and NSX

6.

Custom Portal

To which infrastructure quality does the 'Microsegmentation' technical requirement map?

A. Performance

B. Security

C. Manageability

D. Availability

E. Recoverability

Correct Answer: B

QUESTION 4

A company has been successfully deploying virtual machines to its data center in Boston for over a year. The architect has added the endpoint in vRealize Automation and been tasked with consuming the resources in a new data center in

Las Vegas.

With minimal change to the catalog design, which two design options could the architect consider in order to enable users to begin deploying machines to both data centers? (Choose two.)

A. Configure the locations.xml file on the IaaS Manager servers to contain a location for Las Vegas. Select 'Display Location on Request' within your existing blueprints.

B. Create a new reservation utilizing compute resources in Las Vegas. Create a new reservation policy and assign it to the new reservation.

C. Configure the locations.xml file on the IaaS Web servers to contain a location for Las Vegas. Select 'Display location on request' within your existing blueprints.

D. Copy your existing blueprints and set the reservation policy to the new reservation policy that is set on the Las Vegas reservation.

E. Create a new reservation utilizing compute resources in Las Vegas. Set the reservation policy to the same as the Boston reservation.

Correct Answer: BE

QUESTION 5

A company runs a fast-growing international business and wants to be able to dynamically deploy to crossregion data centers being added or expanded around the globe every three to six months. What is the recommended approach to achieve this goal?

- A. Leverage the data center locations XML file to maintain all data center locations.
- B. Use the vRealize CloudClient to manage provisioned machines.
- C. Deploy a different virtualization proxy agent in each data center location.
- D. Target a different company region in every data center location.

Correct Answer: C
