-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Assume 20 bytes of voice payload, 6 bytes for the Layer 2 header, 1 byte for the end-of-frame flag, and the IP, UDP, and RTP headers are compressed to 2 bytes, how much bandwidth should be allocated to the strict priority queue for six VoIP calls that use a G.729 codec over a multilink PPP link with cRTP enabled?

- A. 80.4 kb/s
- B. 91.2 kb/s
- C. 78.4 kb/s
- D. 69.6 kb/s
- E. 62.4 kb/s

Correct Answer: D

Voice payloads are encapsulated by RTP, then by UDP, then by IP. A Layer 2 header of the correct format is applied; the type obviously depends on the link technology in use by each router interface: A single voice call generates two one-way RTP/UDP/IP packet streams. UDP provides multiplexing and checksum capability; RTP provides payload identification, timestamps, and sequence numbering.

QUESTION 2

Which two Security Assertion Markup Language (SAML) bindings are supported by Cisco Unified Communications Manager for Single Sign-On? (Choose two.)

- A. SAML URI
- B. HTTP POST
- C. Reverse SOAP
- D. HTTP Redirect
- E. SOAP
- F. HTTP Artifact

Correct Answer: BD

QUESTION 3

Which two data frame lengths are supported by iLBC? (Choose two.)

- A. 10 milliseconds
- B. 20 milliseconds
- C. 30 milliseconds

- D. 40 milliseconds
- E. 50 milliseconds
- F. 60 milliseconds

Correct Answer: BC

iLBC-Internet Low Bit Rate Codec (iLBC) provides audio quality between that of G.711 and G.729 at bit rates of 15.2 and 13.3 kb/s, while allowing for graceful speech quality degradation in a lossy network due to the speech frames being encoded independently. By comparison, G.729 does not handle packet loss, delay, and jitter well, due to the dependence between speech frames. iLBC is supported for SIP, SCCP, H323, and MGCP devices.

QUESTION 4

Which two file transfer protocols are used to send Call Detail Record flat files to third-party billing servers? (Choose two.)

- A. SCP
- B. SFTP
- C. TFTP
- D. FTP
- E. SOAP/HTTPS
- F. FTP over SSL

Correct Answer: BD

QUESTION 5

Refer to the exhibit.

Which SIP response message should the TGW send if it cannot process the tunneled QSIG messages from the OGW?

- A. 405 Method Not Allowed
- B. 406 Not Acceptable
- C. 412 Conditional Request Failed
- D. 415 Unsupported Media Type
- E. 485 Ambiguous

Correct Answer: D

Fallback from QSIG Tunneling

In some situations, QSIG tunneling will fail or need to fall back:

?Remote party does not support multipart MIME body: In this case, the remote side sends a";415 Media Not Supporte"; response. Upon receiving this response, OGW will fall back to normal mode and send an INVITE request without any

tunneled content. This procedure helps ensure that at least the basic call will work normally.

?Remote party does not understand tunneled content: If the remote side does not support the tunneled content, it should drop the tunneled content and continue as a normal call; because all essential parameters are present in the original

INVITE, the call can go through without the need for fallback.
