QUESTION 1

Scenario 3:

After resolving numerous connectivity issues throughout the various branch sites, connectivity between applications and users is finally present. The network administrator is informed that during certain tests, applications are not performing as they are expected to. Users report that call quality has not fully improved and that some of their calls either drop or have poor voice quality where the conversation is breaking up. Other users are noticing that file transfers are slower than expect. A group of users from a few sites have reported slowness in accessing internal and external applications.

Exhibit.

A network engineer is configuring an Internet Backhaul Policy for the Chicago Branch to utilize NY's hub as a much better source for Internet for certain SaaS applications. For an unknown reason, the network engineer is not able to select the hubs in the Internet Backhaul Policy.

What could be the reason?

- A. The Dynamic Branch to Branch has not been enabled.
- B. The hub is not configured with the proper IP address.
- C. Dynamic Branch to Branch using gateways has not been enabled.
- D. The Edge's profile does not include Backhaul hubs as an option.

Correct Answer: C

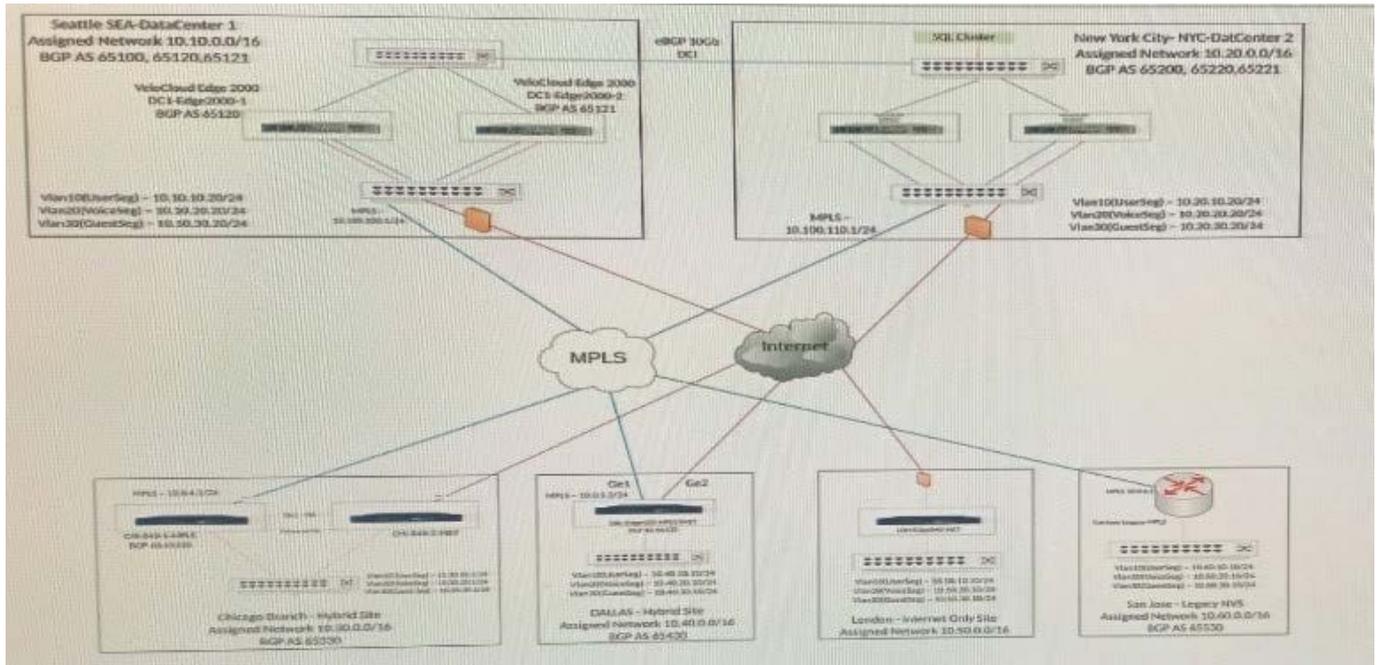

QUESTION 2

Scenario 1:

A network administrator is tasked! with enabling SO-WAN at three branch locations. A topology has been provided for reference. For each site, the administrator is having issues bringing edges online, as another administrator has gone ahead and created a configuration ahead of time. The organization has several branch sites- One is an Internet- only site and two are Hybrid locations with both internet and MPLS: The last location is MPLS only. There are hub data center locations in this environment as well. Please refer to the topology.

Exhibit.

An administrator is attempting to activate two Edge devices at the Chicago branch location. The local technician reports that the Edge devices are not coming online. The Edge devices have been plugged in, powered on, and connected to the correct circuits with an Enhanced HA setup.

What should the local technician check first when troubleshooting the issue?

- A. Verify beep sequence of the Edge devices.
- B. Review color of the LED.
- C. Review the Orchestrator for HA misconfiguration issues.
- D. Verify the link light sequence of the HA ports.

Correct Answer: B

QUESTION 3

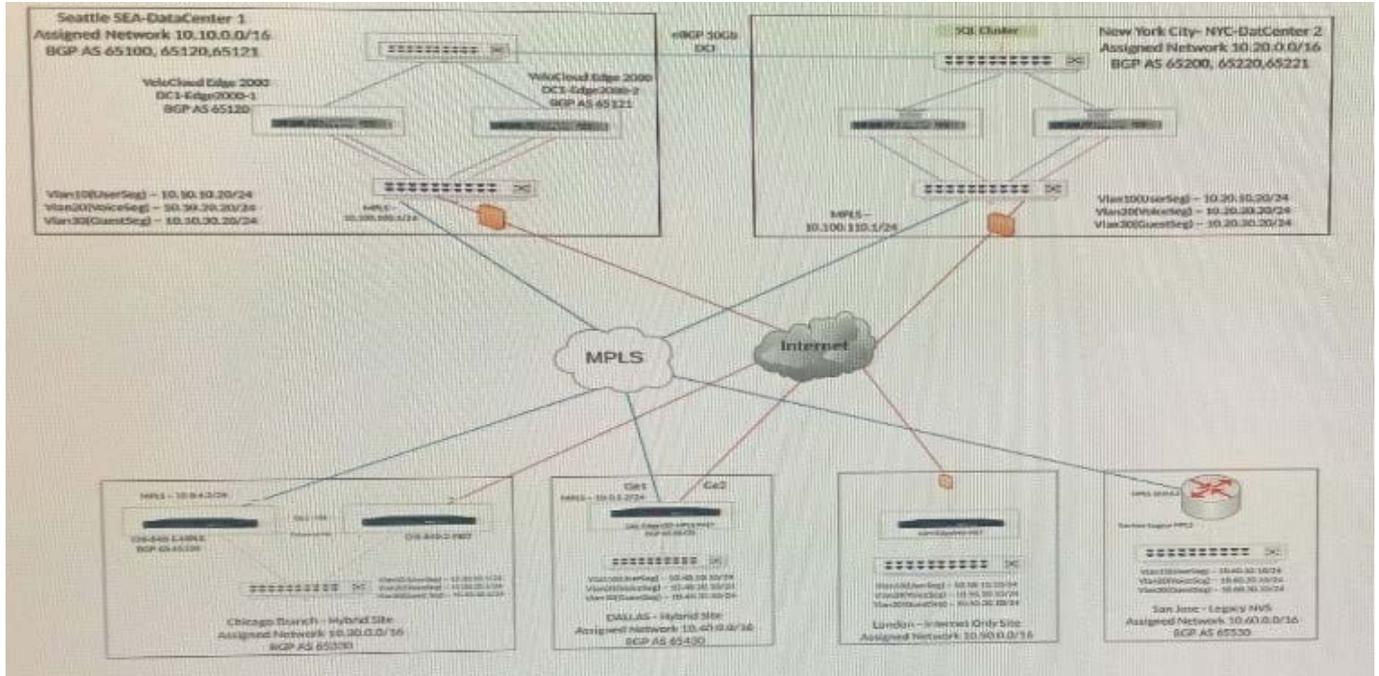

Scenario 3:

After resolving numerous connectivity Issues throughout the various branch sites, connectivity between applications and users is finally present- The network administrator is informed (hat during certain tests, applications are not performing as they are expected to. Users report that call quality has not fully improved and that some of their calls either drop or

have poor voice quality where the conversation is breaking up. Other users are noticing that file transfers are slower than expect. A group of users from a few sites have reported slowness in accessing internal and external applications.

Exhibit.

Which metrics can a network administrator verify in the QoE screen to determine the overall health of Underlay and Overlay?

- A. Jitter Packet Loss, Speed.
- B. Jitter, Packet Loss, Latency.
- C. Jitter, Speed, Latency.
- D. Packet Loss, Latency, Speed.

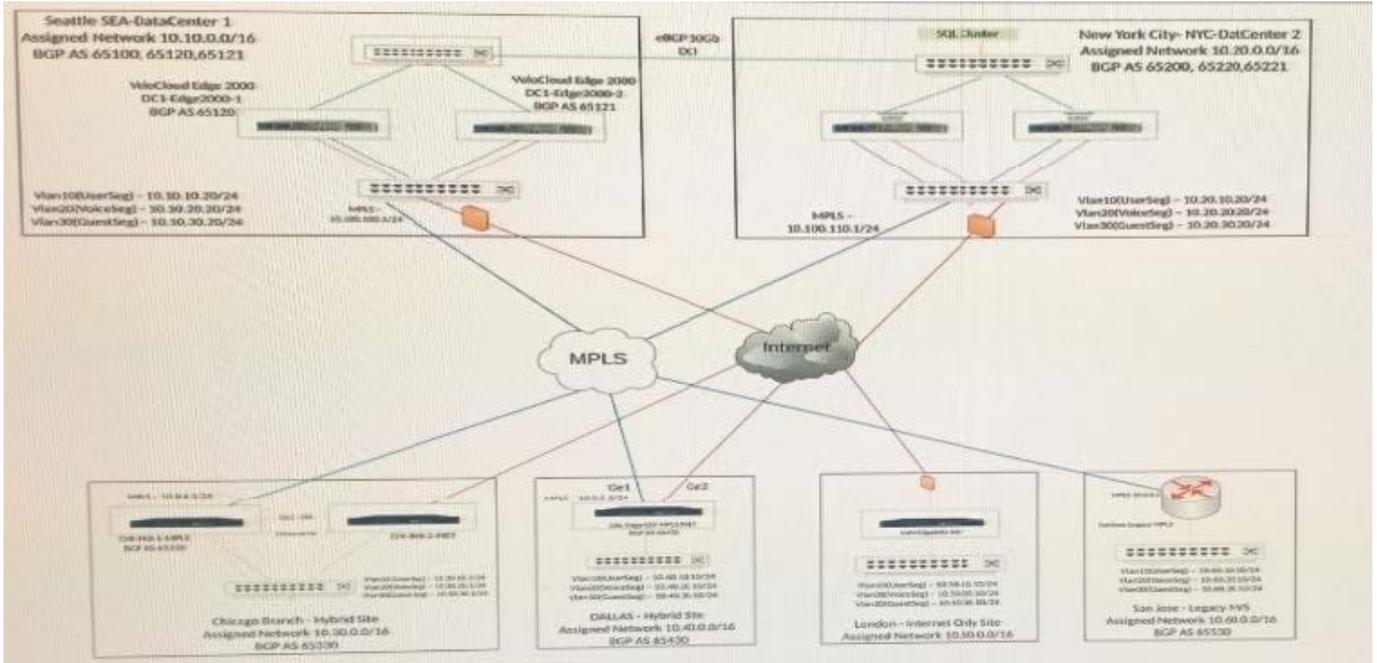

Correct Answer: B

QUESTION 4

Scenario 3:

After resolving numerous connectivity issues throughout the various branch sites, connectivity between applications and users is finally present. The network administrator is informed that during certain tests, applications are not performing as they are expected to. Users report that call quality has not fully improved and that some of their calls either drop or have poor voice quality where the conversation is breaking up. Other users are noticing that file transfers are slower than expect. A group of users from a few sites have reported slowness in accessing internal and external applications.

Exhibit.

A network administrator is receiving complaints that a real-time voice application is not performing well, with choppy audio, and dead audio especially during peak traffic times.

What two actions can the administrator take to diagnose and fix the issue? (Choose two.)

- A. Configure a QoS policy to rate limit all traffic during peak times.
- B. Ensure that the realtime application is matching the correct application type using the diagnostics page.
- C. Check the status of the links using the QoE and Transport tabs for any degraded underlay issues or congestion issues.
- D. Configure a QoS policy to load balance the realtime traffic across all links.

Correct Answer: AC

QUESTION 5

Scenario 1:

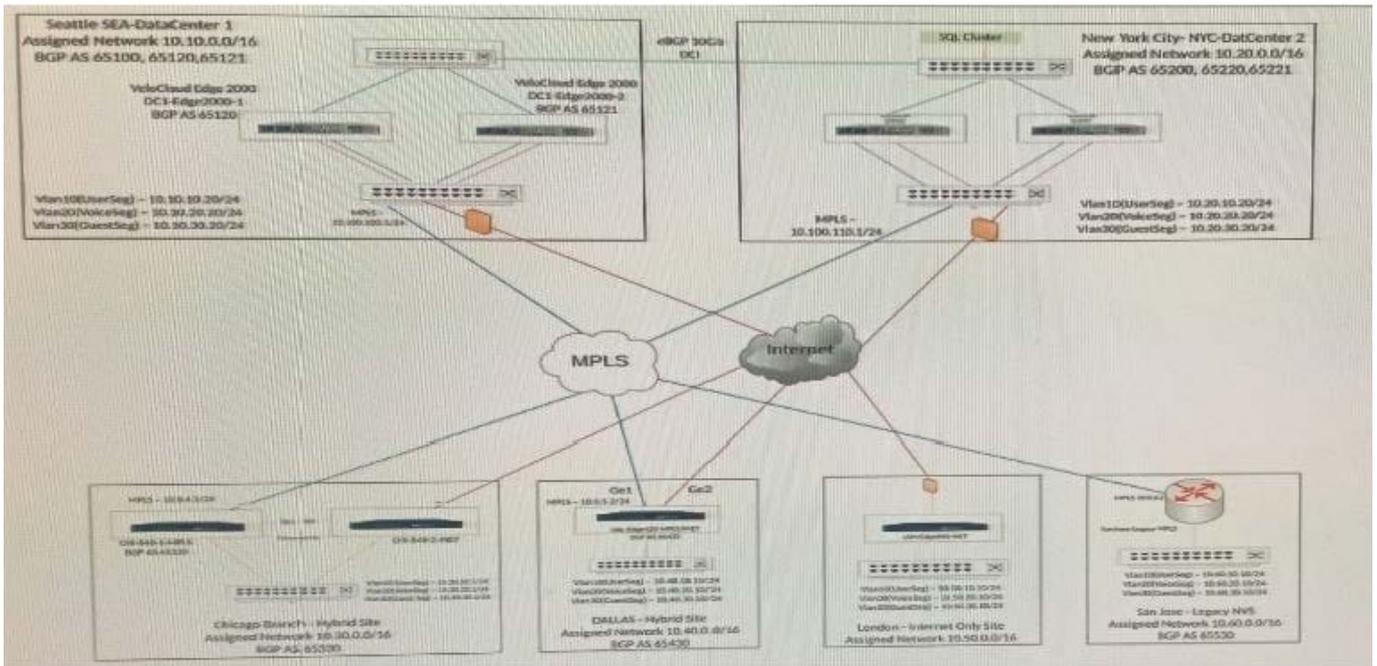

A network administrator is tasked with enabling SO-WAN at three branch locations. A topology has been provided for reference. For each site, the administrator is having issues bringing edges online, as another administrator has gone ahead and created a configuration ahead of time. The organization has several branch sites. One is an Internet- only site and two are Hybrid locations with both internet and MPLS. The last location is MPLS only. There are hub data center locations in this environment as well. Please refer to the topology.

After the network administrator has determined the problem with the Edge not being able to access the Internet, the administrator receives another error stating that the SD-WAN Orchestrator is still not reachable.

The VCO's address is Amer-vcoOl.velocloud.net.

Refer to the Exhibit(s).

Hi,
To activate your VeloCloud Edge, please follow these steps:

1. Connect your device to power and any Internet cables or USB modems.
2. Find and connect to the Wi-Fi network that looks like "velocloud-" followed by 3 more letters/numbers (e.g. "velocloud-01c"), and use "vcsecret" as the password. If your device does not have Wi-Fi, connect to it using an Ethernet cable.
3. Click the following link to activate your edge
http://192.168.2.1/?activation_key=XJH2-CBPB-Q8D5-NNRQ&custom_vco=127.0.0.01

If you experience any difficulty, please contact your IT admin.

What might be disallowing the Edge to communicate with the Orchestrator?

- A. The SD-WAN Orchestrator specified is incorrect, and a new activation email needs to be sent.
- B. The local firewall that the Edge uses to reach externally is blocking UDP Port 53 in both directions.
- C. The SD-WAN Orchestrator has a limited 60-second window for the Edge to come online.
- D. The SD-WAN Orchestrator is not being resolved for DNS.

Correct Answer: C
