QUESTION 1

When a service profile is disassociated from a server, what happens to the identity and connectivity information for the server?

A. It is cleared and set to the default that was setup initially by the first configuration.

B. It is maintained and can be reused.

C. It is reset to factory defaults.

D. It uses master service profile parameters.

E. It takes parameters of other servers in the service profile.

Correct Answer: C

QUESTION 2

Which option describes why the service profiles do not inherit changes from the template?

A. The service profile is not compatible with the changes.

B. The changes to the template have not been committed.

C. It is an initial template.

D. The service profile has disabled inheritance.

Correct Answer: C

QUESTION 3

A customer is trying to boot an operating system installed on a Cisco UCS B-Series blade server after a RAID1 cluster migration. The RAID LUN remains in inactive state during and after the service profile association and the server does not boot. What is the cause of this problem?
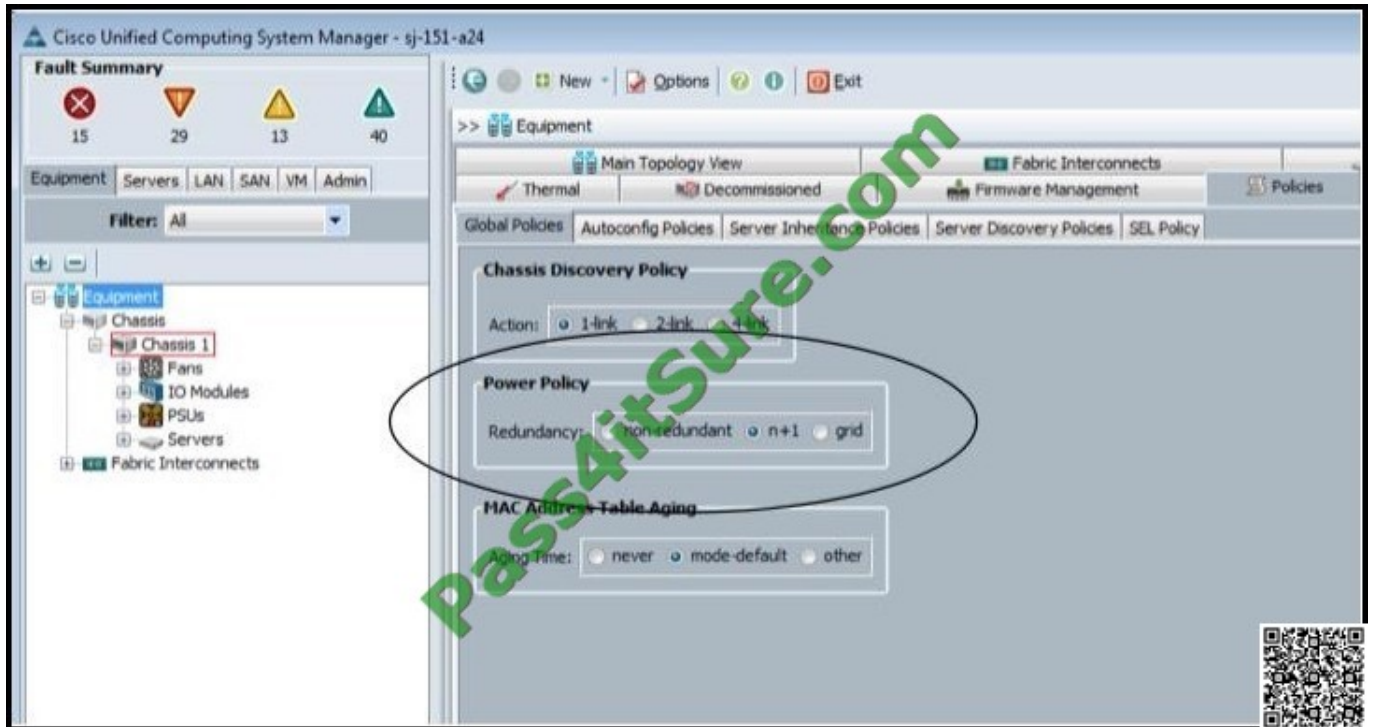

A. RAID1 is not supported in cluster migration mode on a Cisco UCS B-Series blade server.

B. The local disk configuration policy in the service profile on the server is configured with Any Configuration mode rather than RAID1.

C. The server needs to be booted via SAN in cluster migration to support RAID1.

D. The Cisco UCS B-Series blade server has older firmware that needs to be updated first.

Correct Answer: B

QUESTION 4

Refer to the exhibit.

Which type of power policy is shown when referring to a Cisco UCS environment?

A. chassis

B. blade server

C. fabric interconnect

D. global

E. switch
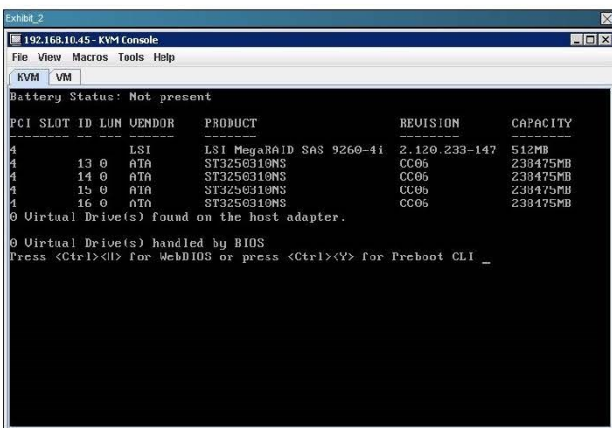

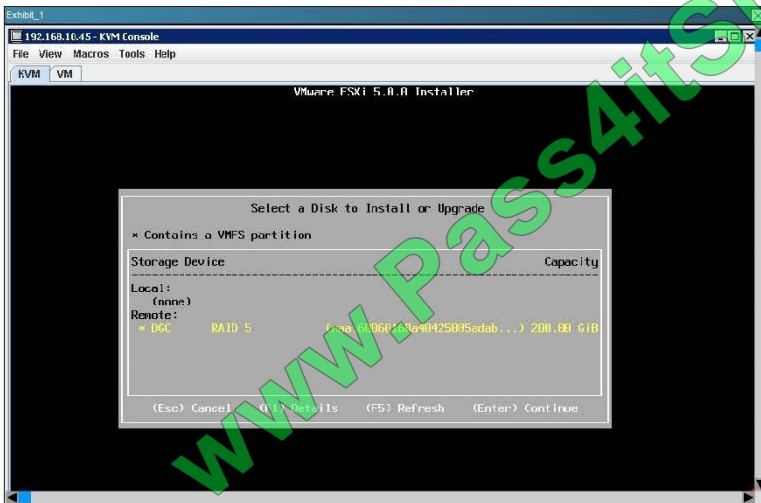

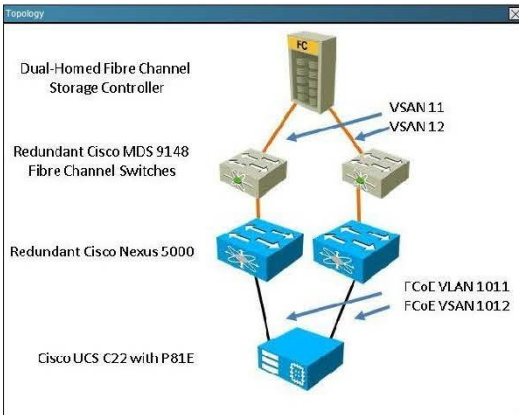

Correct Answer: D

QUESTION 5

Instructions

- THIS TASK DOES NOT REQUIRE DEVICE CONFIGURATION.
- Before beginning the questions, carefully read the information in the Scenario tab and familiarize yourself with the network topology.
- To access the multiple-choice questions, click on the numbered boxes on the left of the top panel.
- There are four multiple-choice questions with this task. Be sure to answer all four questions before clicking the Next button.
- Use the tabs at the bottom of the question to navigate between the Topology and question-specific Exhibits. Exhibit_1 maps to Question 1, and so on.
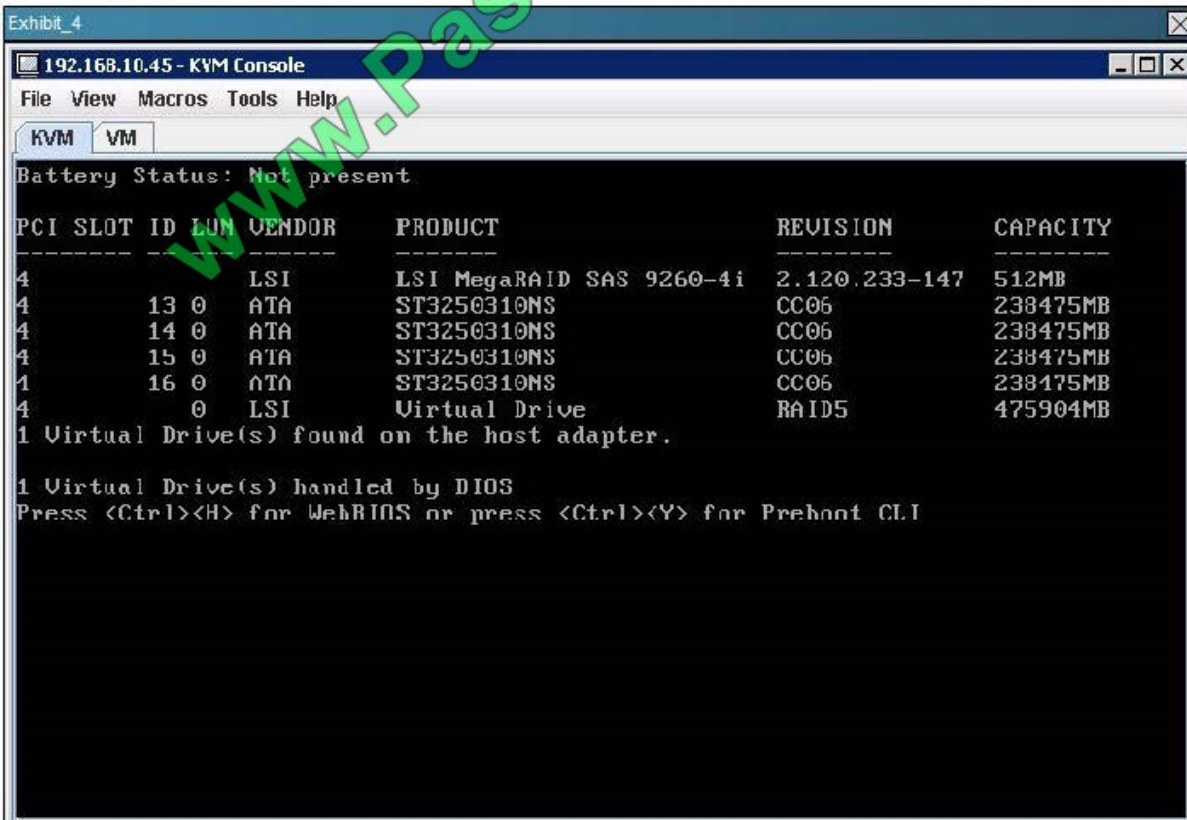

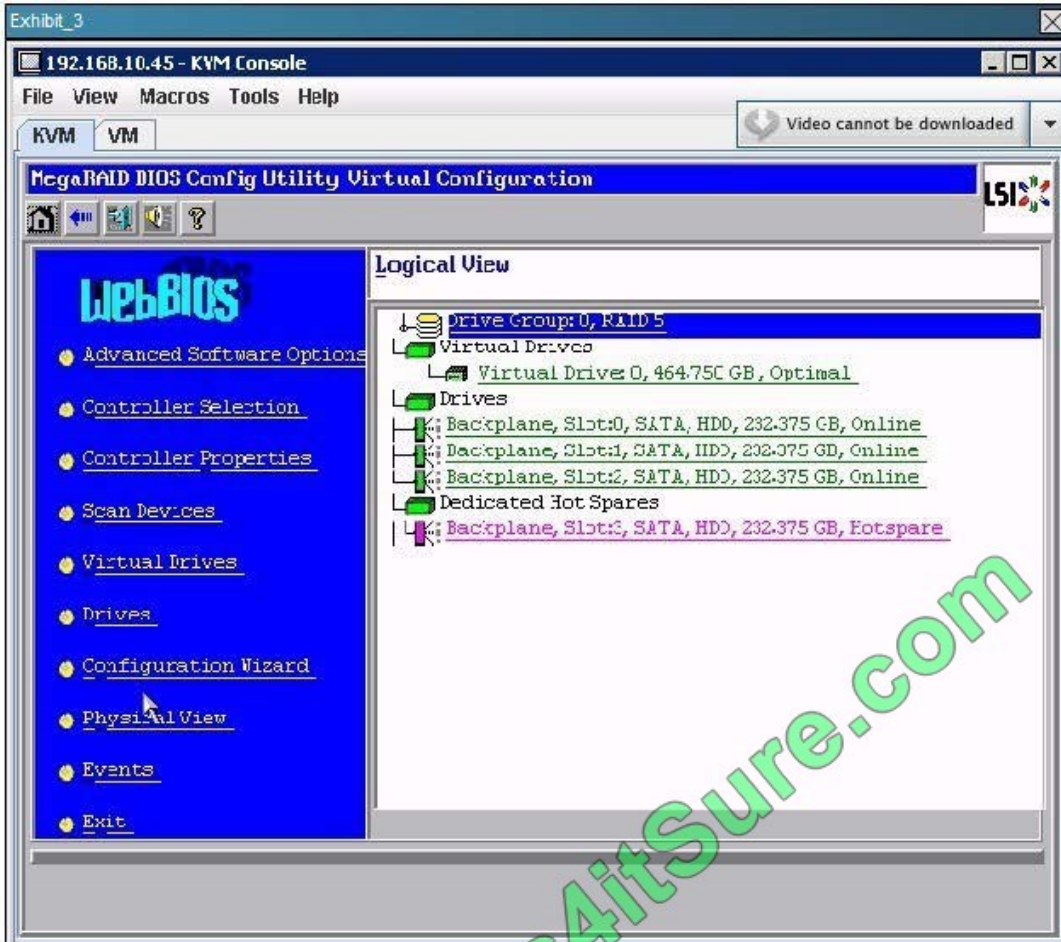

Scenario

Your customer has purchased a Cisco UCS C22 M2 server equipped with an LSI MegaRAID 9260-4i, four SAS hard drives, and a Cisco UCS P81E VIC.

Because Fibre Channel storage is at a premium at this data center, the customer decides to boot VMware ESXi 5.0 from local storage and attach to the VMs on a VMFS LUN on a Fibre Channel storage controller with a large RAID array.

The customer is encountering issues connecting to local storage, and you are called on-site to get the server into production.

Topology

Dual-Homed Fibre Channel Storage Controller
