**QUESTION 1**

Your PSTN carrier sends digits to your T1 PRI circuit in a digit-by-digit format. How must the T1 PRI circuit be configured to support this capability?

- A. The T1 PRI controller supports either en-bloc or digit-by-digit formats natively.
- B. The serial interface that is associated with the T1 controller needs to include the isdn incoming-voice command.
- C. The T1 controller needs to include the isdn overlap-receiving command.
- D. The serial interface that is associated with the T1/E1 controller needs to include the isdn overlap- receiving command.

Correct Answer: D

Explanation: Configuring Overlap-receiving on the D-channel changes the way routers behave when receiving ISDN calls. Overlap receiving allows the matching of dial peers as the digits are being received. The router responds to the setup message with a SETUP ACK. This informs the network that it is ready to receive further information messages containing additional call routing elements. **QUESTION 2**

When a LAN switch port is configured with mls qos trust cos, if the pass-through dscp command option isn't present, how will the switch port treat incoming DSCP-marked frames?

- A. It will pass the DSCP-marked frames.
- B. It will re-mark the DSCP frames according to the CoS-to-DSCP mapping table.
- C. The port will re-mark the frames according to the DSCP-to-CoS mapping table.
- D. The switch port will convert the DSCP setting to CoS values and use that to select the egress queue for the frame.

Correct Answer: B

---

**QUESTION 3**

How many VoIP G.711 calls can be made simultaneously over a 256-kb/s Frame Relay circuit (Layer 3) if cRTP is enabled and the default IOS voice payload size of 160 is used?

- A. 1
- B. 3
- C. 4
- D. 5

Correct Answer: B

---

#### QUESTION 4
