**QUESTION 1****DRAG DROP**

Your network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) environment.

You need to create a collection that excludes all of the client computers that have Microsoft Office 2013 installed.

Which four actions should you perform in sequence to create the query for the collection?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Select **is not** as the Operator.

Display the estimated execution plan.

Browse to the new query and select the query

Create a query-based collection that uses the Sub Selected values option.

Create a query that returns all of the client computers that have Office 2013 installed.

Modify the query to use only indexed tables that are returned by the estimated execution plan.

Answer Area

Correct Answer:

Actions

Display the estimated execution plan.

Modify the query to use only indexed tables that are returned by the estimated execution plan.

Answer Area

Create a query-based collection that uses the Sub Selected values option.

Create a query that returns all of the client computers that have Office 2013 installed.

Browse to the new query and select the query

Select **is not** as the Operator.

**QUESTION 2****DRAG DROP**

Your network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) environment.

You need to create a new report based on the report named All software companies. The new report must exclude a software company named Litware, Inc.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Edit the query.

Create a new report.

Clone the All software companies report.

Open the All software companies report for editing.

Copy the existing query from the dataset in Report Builder.

In Report Builder, paste the query to the dataset for the new report.

Answer Area

Correct Answer:

Actions

Clone the All software companies report.

Open the All software companies report for editing.

Answer Area

Copy the existing query from the dataset in Report Builder.

Create a new report.

In Report Builder, paste the query to the dataset for the new report.

Edit the query.

QUESTION 3

DRAG DROP

Your network contains a System Center 2012 Configuration Manager environment.

You create a collection named All Marketing Users.

You need to inventory the desktop settings of the All Marketing Users collection.

What should you do?

To answer, move the four appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Create a custom client user setting named Env.	
Create a custom client device setting named Env.	
Deploy the Env custom setting to the All Marketing Users collection.	
In the Env custom setting, select User Device Affinity .	→
In the Envcustom setting, select Hardware Inventory .	←
In the Envcustom setting, select Desktop (Win32_Desktop) .	
In the Envcustom setting, select Environment (Win32_Environment) .	

Correct Answer:

Create a custom client user setting named Env.	Create a custom client device setting named Env.
	In the Envcustom setting, select Hardware Inventory .
	In the Envcustom setting, select Desktop (Win32_Desktop) .
In the Env custom setting, select User Device Affinity .	Deploy the Env custom setting to the All Marketing Users collection.
In the Envcustom setting, select Environment (Win32_Environment) .	

* Win32_Environmentclass (Windows)

The Win32_Environment WMI class represents an environment or system environmentsetting on a Windows computer system. Querying this class returns environment variables found in:

HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\Sessionmanager\Environment

And HKEY_USERS\Environment

Since we need to inventory WMI information, that means we need Hardware Inventory and you can only do that with a Custom Client Device Setting:

Create Custom Client Device Settings

General

Hardware Inventory

Custom Device Settings

Specify the settings for devices. These settings override the default settings when they are assigned to a collection.

Name: Env

Description:

Select the custom settings to be enforced on client devices

- ☐ Background Intelligent Transfer
- ☐ Client Policy
- ☐ Compliance Settings
- ☐ Computer Agent
- ☐ Computer Restart
- ☐ Endpoint Protection
- ☒ Hardware Inventory
- ☐ Network Access Protection (NAP)
- ☐ Power Management
- ☐ Remote Tools
- ☐ Software Deployment
- ☐ Software Inventory
- ☐ Software Metering
- ☐ Software Updates
- ☐ State Messaging
- ☐ User and Device Affinity

OK Cancel

Create Custom Client Device Settings

General

Hardware Inventory

Hardware Inventory Classes

Select the hardware inventory classes to enable them for inventory collection. Class properties with grayed checkbox are defined in default agent setting. Go to Modify Default Agent Setting if you want to disable them.

Search for inventory classes

QUESTION 10
DRAG DROP

**QUESTION 4****HOTSPOT**

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment.

You use Configuration Manager to deploy Windows 8.1 to client computers.

You need to encrypt the contents of the operating system volume during the operating system deployment and to store recovery keys in Active Directory. The solution must minimize the amount of time required to deploy the operating system.

Which task sequence steps should you use to perform each task? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Encrypt the drive:

	▼
Enable BitLocker	
Pre-provision BitLocker	

Store the recovery key:

	▼
Enable BitLocker	
Capture the Windows settings	
Pre-provision BitLocker	

Correct Answer:

Answer Area

Encrypt the drive:

	▼
Enable BitLocker	
Pre-provision BitLocker	

Store the recovery key:

	▼
Enable BitLocker	
Capture the Windows settings	
Pre-provision BitLocker	

*

Pre-provision BitLocker

This step enables BitLocker on a drive while in Windows PE. Only the used drive space is encrypted. Because you partitioned and formatted the hard drive in the previous step, there is no data, and encryption completes very quickly.

*

Enable BitLocker

This step enables BitLocker encryption on the hard drive and sets key protectors. Because the hard drive was pre-provisioned with BitLocker, this step completes very quickly.

Windows 7/8/10 requires that you add a key protector.

Note: The Pre-provision BitLocker task sequence step in Microsoft System Center 2012 Configuration Manager allows you to enable BitLocker from the Windows Preinstallation Environment (Windows PE) prior to operating system

deployment. Only the used drive space is encrypted, and therefore, encryption times are much faster.

QUESTION 5

HOTSPOT

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment.

From the Configuration Manager Console, you view the Deployment node from the Monitoring workspace as shown in the following table:

Software	Collection	Purpose	Action
App1	All Desktop and Server	Required	Install
App2	All Desktop and Server clients	Simulate	Install
App3	All Users	Available	Install
App4	All Desktop and Server clients	Required	Remediate

App2 has several requirements added to the deployment type. The Monitoring workspace displays the following completion statistics for App2.

- Success: 3
- In Progress: 0
- Error: 0
- Requirements Not Met: 5
- Unknown: 0

You need to identify the deployment status of App2.

What should you identify? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Number of client computers that have installed App2 as a result of this deployment:

	▼
0	
1	
2	
3	
4	
5	
6	
7	
8	

Number of client computers that meet the requirements for the application:

	▼
0	
1	
2	
3	
4	
5	
6	
7	
8	

Correct Answer:

Answer Area

Number of client computers that have installed App2 as a result of this deployment:

	▼
0	
1	
2	
3	
4	
5	
6	
7	
8	

Number of client computers that meet the requirements for the application:

	▼
0	
1	
2	
3	
4	
5	
6	
7	
8	

Use simulated deployments if you want to test the applicability of an application deployment to computers without installing or uninstalling the application. A simulated deployment evaluates the detection method, requirements and dependencies for a deployment type, and reports the results in the Deployments node of the Monitoring workspace.
