**QUESTION 1**

Your role of Systems Administrator at ABC.com includes the management of the company's private cloud.

The private cloud is hosted on an internal System Center 2012 infrastructure.

System Center 2012 Operations Manager (SCOM) is used to monitor all network devices.

The network has a leased line connection to your ISP.

A router managed by the ISP connects the leased line to the LAN. The router is configured to allow only the ISP to access the configuration of the router to comply with the security policy of the ISP.

You want to use System Center 2012 - Operations Manager (SCOM) to monitor the router and alert you if the router goes offline.

You need to configure SCOM to discover the router while adhering to the ISP security policy.

Which access mode should you use?

- A. SNMPv2 only.
- B. ICMP only.
- C. ICMP and SNMPv2.
- D. SNMPv2 and SNMPv3.

Correct Answer: B

This is a tricky question, but the answer is B, ICMP (ping) only. The question says "Operations Manager (SCOM) is used to monitor all network devices."... This made me think that the answer had to be both ICMP and SNMPv2 (C), but that is wrong! It is wrong because if we specify that a device uses both ICMP and SNMP, Operations Manager must be able to contact the device by using both methods or discovery will fail. So it has to be B. Also worth noting that in Operations Manager, only ONE network discovery rule can be running per Management/Gateway server. Each server can only run one network discovery. Here's a good post regarding network discovery in SCOM.

QUESTION 2

You need to recommend a solution to remediate the Exchange Server 2010 service failures. The solution must meet the technical requirements. What should you include in the recommendation?

- A. Create a service request workflow that triggers a dependent activity.
- B. Create an incident event workflow that triggers a dependent activity.
- C. Create an incident event workflow that triggers a runbook activity.
- D. Create a service request workflow that triggers a runbook activity.

Correct Answer: C

**QUESTION 3**

You need to ensure that you can manage the updates to the virtualization infrastructure.

Hot Area:

You write the following Windows PowerShell script:

```
$User = Get-Credential  
Add-SCUpdateServer Target 1 -TCPPort Target 2 -Credential $User
```

How should you complete the script? To answer, select the appropriate options in the answer area.

Answer Area

Target 1:

Target 2:

You write the following Windows PowerShell script: How should you complete the script? To answer, select the appropriate options in the answer area.

Answer Area

Target 1:

<input type="text"/>
-ComputerName LON-WSUS1.fabrikam.com
-VMMServer LON-VMM1.fabrikam.com

Target 2:

<input type="text"/>
80
443
5723
8530

Correct Answer:

Answer Area

Target 1:

<input type="text"/>
-ComputerName LON-WSUS1.fabrikam.com
-VMMServer LON-VMM1.fabrikam.com

Target 2:

<input type="text"/>
80
443
5723
8530

**QUESTION 4**

Your network contains an Active Directory domain named contoso.com that connects to a Windows Azure environment. You deploy System Center 2012 R2 Data Protection Manager (DPM) to the domain.

You need to ensure that you can use DPM to back up to the Windows Azure environment.

Which three actions should you perform? Each correct answer presents part of the solution.

- A. From Windows Azure, create an endpoint.
- B. On the DPM server, allow inbound traffic on TCP port 135.
- C. Install the Windows Azure Backup agent.
- D. Install a certificate on the DPM server and the upload the certificate to Windows Azure.
- E. Create a backup vault.

Correct Answer: CDE

QUESTION 5

Your company has a private cloud that is managed by using a System Center 2012 infrastructure. The network contains an Operations Manager infrastructure and a Virtual Machine Manager (VMM) infrastructure.

You implement a Microsoft SharePoint Server 2010 farm that is hosted on 10 virtual machines.

The company defines a service level agreement (SLA) for the farm's availability of at least 99.9 percent uptime.

You need to ensure that the company's compliance officer can identify whether the SLA requirement is met.

What should you do?

- A. Create a group, and then add all of the farm servers to the group. Create a Service Level Tracking object. Add a service level objective (SLO), and then set the goal to 99.9 percent.
- B. Create a group, and then add all of the farm servers to the group. Create a performance collection rule for each front-end Web server in the farm. Configure an alert if network availability falls below 99.9 percent.
- C. Create a distributed application that contains the servers and the services used by the farm. Create a Service Level Tracking object for the distributed application. Add a service level objective (SLO), and then set the goal to 99.9 percent.
- D. Create a distributed application that contains the servers and the services used by the farm. Create a performance collection rule for each front-end Web server in the farm. Configure an alert if network availability falls below 99.9 percent.

Correct Answer: C
