QUESTION 1

Your company has a private cloud managed by a System Center 2012 Virtual Machine Manager (VMM) infrastructure.

The server fabric contains three servers named Host1, Host2, and Host3. The servers are configured as shown on the following table.

Server name	Server role	Host group	Connection
Host1	Hyper-V host VMM library	HG1	Fibre Channel
Host2	VMM library	HG2	iSCSI
Host3	Hyper-V host	HG3	Fibre Channel

The networking fabric contains a SAN named STORAGE1. STORAGE1 supports cloning.

You create a SAN copy-capable template named Template1 for a new virtual machine.

Template1 uses a VHD stored on Host2.

You need to ensure that Template1 can be used to provision virtual machines on Host1 and Host3. The solution must use the minimum amount of administrative effort and must use SAN cloning.

What should you do? (Each correct answer presents part of the solution. Choose two.)

- A. Move Template1 to Host1.
- B. Move Template1 to Host3.
- C. Add Host1 to HG2.
- D. Configure Host2 to use Fibre Channel connection.
- E. Configure Host3 to use an iSCSI connection.
- F. Add Host3 to HG1.

Correct Answer: AF

Put the template on the Library server (host 1).

Add the second host (host3) to the Host group on the library server (host1).

QUESTION 2

You need to identify which component or components of Tier 2 of App1 can be deployed by using Server App-V.

Which component or components should you identify? (Each correct answer presents part of the solution. Choose all

that apply.)

- A. The Web Server (IIS) server role
- B. Web applications
- C. Windows services
- D. WMI providers
- E. Drivers

Correct Answer: BCD

Some of the features supported by Server App-V are the following:

Windows Services: Server App-V includes the possibility to virtualize Windows Services in a different approach than the one we've seen in Desktop App-V. With Server App-V, the service is installed and placed in the OS as a normal installation of the server application. This way we can monitor it as any local service.

Web applications hosted in IIS: We can virtualize web applications entirely (web sites, virtual directories and application pools) on IIS 6, IIS 7 and IIS 7.5. **WMI:**

Server App-V Sequencer also captures the WMI providers and/or classes created during an installation.

SQL Services Reporting Services: Even though SQL Server engine is not supported for virtualization, the applications that install SQL Services Reporting Services (SSRS) are supported.

COM/DCOM/COM+ objects: These components are registered in the deployment process, this way other applications in the server can access them.

Local users and Groups: If the application is creating users and/or groups during the installation, the Server App-V Sequencer captures and maintains, including SID, for next deployments. Not all applications are supported for use with

Server App-V. Applications such as antivirus software that require device or kernel driver support are not supported. Server App-V is primarily designed for use with business applications or the business tiers of multi-tiered applications.

Consequently some large server applications such as Microsoft Exchange Server, Microsoft SQL Server, and Microsoft SharePoint are not supported. While there is no list of supported applications for use with Server App-V, Server App-V has

been optimized to create virtual application packages for applications with the following attributes:

State persisted to local disk

Microsoft Windows Services

Internet Information Services (IIS)

Registry

COM+ / DCOM

Text-based Configuration Files

WMI Providers

Microsoft SQL Server Reporting Services

Local Users and Groups

Scheduled Tasks

Microsoft SQL Server Databases

QUESTION 3

You need to recommend a solution to ensure that the database administrators can install, stop, start, and remotely control all of the virtual machines that run SQL Server from a single self- service console. What should you include in the recommendation?

- A. Virtual Machine Manager Self-Service Portal (VMMSSP) 2.0
- B. Service Manager Self-Service Portal
- C. System Center 2012 App Controller
- D. Virtual Machine Manager Self-Service Portal (VMMSSP)

Correct Answer: C

QUESTION 4

You need to recommend a patching solution for the VMM infrastructure. The solution must meet the requirements for the planned private cloud infrastructure. What should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Cluster-Aware Updating (CAU)
- B. A Service Manager workflow
- C. An Orchestrator runbook
- D. VMM update remediation

Correct Answer: D

<http://technet.microsoft.com/en-us/library/gg675088.aspx> Incorrect:

Not A. Cluster-Aware Updating (CAU) requires Windows Server 2012. The servers in this scenario are running Windows Server 2008 R2.

QUESTION 5

Your company has a private cloud that is managed by a System Center Service Manager 2010 Service Pack 1 (SP1) infrastructure. The infrastructure contains four servers as shown in the following table.

Server name	Server role
MGT1	Management server
DATA1	Data warehouse management server
SSRS1	Microsoft SQL Server Reporting Services
SQL1	Microsoft SQL Server

You upgrade MGT1 and DATA1 to Service Manager 2012.

You need to ensure that DATA1 can continue to deploy reports to SSRS1.

Which two tasks should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Copy the Microsoft.EnterpriseManagement.Reporting.Code.dll file to SSRS1.
- B. Modify the RSReportServer.config file on MGT1.
- C. Modify the RSReportServer.config file on SSRS1.
- D. Modify the RSSrvPolicy.config file on DATA1.
- E. Modify the RSSrvPolicy.config file on SQL1.
- F. Copy the Microsoft.EnterpriseManagement.Reporting.Code.dll file to SQL1.

Correct Answer: AC
