QUESTION 1

You need to ensure that profile information about contractors and employees is available in search results.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Enable continuous crawl on the Blue Yonder People Search content source.	
Enable continuous crawl on the Margie's Travel People Search content source.	
As the site collection administrator, configure service application settings for the site collection.	
Select the Search service application that contains https:// margiestravel.blueyonderairlines.com	
Select the Search service application that contains https:// blueyonderairlines.com	
Disable continuous crawl on the Margie's Travel People Search content source.	
As the Search service administrator, configure service application settings in Central Administration.	

Correct Answer:

	Answer Area
Enable continuous crawl on the Blue Yonder People Search content source.	Enable continuous crawl on the Margie's Travel People Search content source.
	Select the Search service application that contains https:// margiestravel.blueyonderairlines.com.
As the site collection administrator, configure service application settings for the site collection.	As the Search service administrator, configure service application settings in Central Administration.
Select the Search service application that contains https:// blueyonderairlines.com.	
Disable continuous crawl on the Margie's Travel People Search content source.	

Note:

* From Scenario:

Allow resource coordinators from Blue Yonder to find temporary staffing options from Margie\'s Travel contractors and employees.

* How to create and configure a SharePoint Search service application When you deploy and configure a Search service application, you perform the following

main tasks:

1. Create accounts -- Certain domain user accounts are required specifically for a Search service application.

2. Create a Search service application -- A Search service application provides enterprise search features and functionality.

3. Configure the Search service application -- Basic configuration of a Search service application includes configuring a default content access account, an email

contact, and content sources.

4. You configure a Search service application on the Search Administration page for that service application.

5. Configure the Search service application topology -- You can deploy search components on different servers in the farm. You can also specify which instance of

SQL Server is used to host the search-related databases.

* Enabling continuous crawl has the following advantages:

The search results are very fresh, because the SharePoint content is crawled frequently to keep the search index up to date.

The search administrator does not have to monitor changing or seasonal demands for content freshness. Continuous crawls automatically adapt as necessary to

the change rate of the SharePoint content.

Reference: Create and configure a Search service application in SharePoint Server 2013

QUESTION 2

A company is planning to deploy My Sites to its 25,000 employees. The company will maintain dedicated content databases for the storage of personal site collections.

You need to create the minimum number of content databases required to support the My Sites.

What should you do?

A. Create three content databases. Set the value of the WarningSiteCount property of each content database to 10,000.

B. Create one content database. Set the value of the WarningSiteCount property of the content database to 25,000.

C. Create one content database. Set the value of the MaxSiteCount property of the content database to 25,000.

D. Create three content databases. Set the value of the MaxSiteCount property of each content database to 10,000.

E. Create five content databases. Set the value of the WarningSiteCount property of each content database to 5,000.

F. Create five content databases. Set the value of the MaxSiteCount property of each content database to 5,000.

Correct Answer: D

QUESTION 3

You are the SharePoint administrator for Contoso. You are responsible for monitoring the health of the SharePoint databases and plan to use SharePoint 2013 Health Analyzer.

You must monitor the health of all databases.

You need to add the databases that are not monitored by the Health Analyzer tool to a SQL Server monitoring plan.

Which database should you add?

A. Content databases

B. Configuration database

C. Usage Log database

D. Web Analytics Service Application Reporting database

Correct Answer: C

QUESTION 4

You deploy a SharePoint Server 2013 server farm and you create a team site.

You perform the following tasks in the team site:

Create a content type named Financial.

Create a content type named Informational.

Enable all auditing policies for both of the content types.

Create a document library named Data and add the new content types to the library.

Enable the bar code policy feature on the Financial content type in the new library only.

For each of the following statements, select Yes if the statement is true. Otherwise select No.

Hot Area:

	Yes	No
When users upload documents to the Data document library, they can specify a content type of Financial or Informational.	○	○
When users upload documents to the Data document library, they can specify a content type of Financial or Informational.	○	○
A log will be kept of all the users who attempt to access documents that use the Financial content type in the Data document library.	○	○

Correct Answer:

	Yes	No
When users upload documents to the Data document library, they can specify a content type of Financial or Informational.	○	○
When users upload documents to the Data document library, they can specify a content type of Financial or Informational.	○	○
A log will be kept of all the users who attempt to access documents that use the Financial content type in the Data document library.	○	○

QUESTION 5

You need to install the appropriate versions of Windows Server, Microsoft SQL Server, and Microsoft .NET Framework in the server environment.

Which operating system and applications should you install? (To answer, drag the appropriate operating systems and applications to the correct server layers in the answer area.

Each operating system or application may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

Answer Area

| .NET Framework 4.0 |
| .NET Framework 4.5 |
| SQL Server 2008 SP2 |
| SQL Server 2008 R2 SP1 |
| SQL Server 2012 |

Operating system

| Windows Server 2008 SP2 |
| Windows Server 2008 R2 SP1 |

Server layer	Operating system	Application
