**QUESTION 1**

A SharePoint farm has a very large search index.

Users report that search results are too broad.

You need to ensure that properties can be used to refine search results.

Which two options should you configure? (Each correct answer presents part of the solution. Choose two.)

- A. Searchable
- B. Queryable
- C. Complete Matching
- D. Retrievable
- E. Refinable
- F. Sortable

Correct Answer: BE

To create a managed property, add type code to the name, and enable a managed property as a refiner

1.

Verify that the user account that performs this procedure is an administrator of the Search service application.

2.

In Central Administration, in the Application Management section, click Manage service applications.

3.

On the Manage Service Applications page, click the Search service application in which you want to create a managed property.

4.

On the Search Administration page, in the Quick Launch, under Queries and Results, click Search Schema.

5.

On the Managed Properties page, click New Managed Property.

6.

On the New Managed Property page, in the Property name box, in the Name and description section, type the name of the new managed property, followed by the appropriate type code. For an overview of type codes, see Type codes.

7.

In the Type section, select the appropriate data type.

8.

In the Main characteristics section, set the following selections: Queryable or Refinable: Yes - active or Yes - latent or You can also specify additional settings in this section.

9.

In the Mappings to crawled properties section, click Add a mapping.

10.

In the Crawled property selection dialog box, find the crawled property that you want to map to the managed property in the list, or search for it by typing the name of the crawled property in the box, and then clicking Find. QUESTION 2

A company has multiple on-premises Active Directory forests. The company plans to implement Office 365 by using a two-way hybrid architecture.

You need to configure the environment to export the local Active Directory to Azure Active Directory and verify that the process is successful.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

At an administrative command prompt, run the following command:

```
csexport <ConnectorName> %temp%\export.xml /f:x
```

Install Azure Active Directory Synchronization Services (AAD Sync).

Install the Azure Active Directory Sync (DirSync) tool.

Select the Active Directory Domain Services connector and perform a full import.

Select the Windows Azure Active Directory connector and perform a delta synchronization.

Answer Area

Correct Answer:

Actions

Instal the Azure Active Directly Sync (DirSync) tool.

Answer Area

Instal Azure Active Directory Synchronization Services (AAD Sync).

Select the Active Directory Domain Services connector and perform a full import.

Select the Windows Azure Active D irectory connector and perform a delta synchronization.

At an administrative command prompt, run the following command:

```
csexport <ConnectorName> %temp%\export.xml /f:x
```

Note:

Step 1: Install Azure Active Directory Synchronization Services (AAD Sync).

AADSync will for most customers be relevant when a new feature is required that is only available in AADSync.

Step 2-3: Import and Synchronize

1. (Step 2) Select Connectors, and select the first Connector with the type Active Directory Domain Services. Click on Run, select Full import, and OK. Do this for all Connectors of this type.
2. Select the Connector with type Windows Azure Active Directory (Microsoft). Click on Run, select Full import, and OK.
3. (Step 3) Make sure Connectors is still selected and for each Connector with type Active Directory Domain Services, click Run, select Delta Synchronization, and OK.
4. Select the Connector with type Windows Azure Active Directory (Microsoft). Click Run, select Delta Synchronization, and then OK. Step 4: Verify

1. Start a cmd prompt and go to %Program Files%\Microsoft Azure AD Sync\bin

2. Run: csexport %temp%\export.xml /f:x Etc.

Incorrect answers:

Not DirSync: Back in October 2014, Microsoft announced that the new "MS Azure AD Sync Services" (AAD Sync) had been released, which means that DirSync is now officially deprecated.

Reference: Moving from DirSync or FIM to Azure Active Directory Sync

QUESTION 3

You are managing multiple SharePoint sites. All users can access the home page on the root SharePoint site.

When users try to access a subsite, they receive an error message stating that the site has not been shared with them.

You need to allow users to request access to the subsite. Which site setting should you configure? (To answer, select the appropriate site setting in the answer area.)

Hot Area:

Site Settings

Users and Permissions

People and groups
Site permissions
Site collection administrators
Site app permissions

Correct Answer:

Site Settings

Users and Permissions

People and groups
Site permissions
Site collection administrators
Site app permissions

QUESTION 4

You need to configure permissions for App1 administrators. What should you do?

- A. Add the adatum.com SharePoint administrators as site collection administrators.
- B. Add the fabrikam.com SharePoint administrators to the SharePoint_Shell_Access role.
- C. Add the fabrikam.com SharePoint administrators as site collection administrators.

D. Add the adatum.com SharePoint administrators to the SharePoint_Shell_Access role.

Correct Answer: B

SharePoint administrators in the fabrikam.com domain must be able to administer App1 by using Windows PowerShell.

QUESTION 5

A company plans to implement SharePoint.

You have the following requirements:

You must implement a hybrid, two-way trust environment.

You must implement single sign on.

You must minimize costs.

You need to plan the implementation of the solution.

Which products should you implement? To answer, select the appropriate product from each list in the answer area.

Hot Area:

Technology	Product
Office 365 version	<ul style="list-style-type: none">SharePoint Online E1SharePoint Online E3
SharePoint on-premises	<ul style="list-style-type: none">SharePoint 2013 StandardSharePoint 2013 Enterprise
Authentication	<ul style="list-style-type: none">On-premises Active Directory Domain Services (AD DS)On-premises Active Directory Federation Services (AD FS)
Internet end-point	<ul style="list-style-type: none">Reverse ProxySSL Certificate

Correct Answer:

Technology	Product
Office 365 version	<ul style="list-style-type: none">SharePoint Online E1SharePoint Online E3
SharePoint on-premises	<ul style="list-style-type: none">SharePoint 2013 StandardSharePoint 2013 Enterprise
Authentication	<ul style="list-style-type: none">On-premises Active Directory Domain Services (AD DS)On-premises Active Directory Federation Services (AD FS)
Internet end-point	<ul style="list-style-type: none">Reverse ProxySSL Certificate

* You can implement Single Sign-on with Office 365 E1 Plan for Exchange Online and SharePoint Online.

* SharePoint 2013 Standard would be enough.

* For single sign on we should use Active Directory Federation Services (AD FS).

* ADFS signs the tokens that it issues with a token signing certificate. You must import into SharePoint a certificate that it can use to validate the token from ADFS.
