QUESTION 1

You are migrating a SharePoint Server 2010 My Site site collection to SharePoint Server 2013 by using the database attach method. You copy the content databases to the SharePoint 2013 farm.

You need to verify that all required objects have been successfully added to the SharePoint 2013 farm before upgrading the content database.

What should you do?

- A. In the SharePoint 2013 site collection, run the site collection health checks.
- B. Run the Windows PowerShell cmdlet Test-SPContentDatabase on the SharePoint 2013 farm.
- C. Run the Windows PowerShell cmdlet Test-SPContentDatabase on the SharePoint 2010 farm.
- D. In the SharePoint 2010 site collection, run the site collection health checks.
- E. Run the Windows PowerShell cmdlet Mount-SPContentDatabase on the SharePoint 2010 farm.
- F. Run the Windows PowerShell cmdlet Mount-SPContentDatabase on the SharePoint 2013 farm.

Correct Answer: B

QUESTION 2

You are configuring SharePoint 2013 to support business intelligence. You need to install PowerPivot for SharePoint.

What should you do?

- A. Download and install PowerPivot for SharePoint from the PowerPivot SQL Server 2008 R2 SP1 Feature Pack webpage.
- B. Download and install PowerPivot for SharePoint from the PowerPivot SQL Server 2012 SP1 Feature Pack webpage.
- C. Run the SQL Server 2012 setup package.
- D. Run the SQL Server 2008 R2 SP1 setup package.

Correct Answer: B

QUESTION 3

A SharePoint deployment includes the content source described in the following table.

Content source	URL	Crawl frequency requirement
Intranet site	http://intranet.contoso.com	When a new document or page is added

You need to configure the intranet site content source to return search results without impacting availability.

What should you do?

- A. Add an additional index server to the farm.
- B. Reset the search index.
- C. Configure continuous crawling.
- D. Configure an incremental crawl to run every day.
- E. Configure an incremental crawl to run every 30 minutes.
- F. Configure on-demand crawling.

Correct Answer: C

QUESTION 4

A company uses SharePoint Online. The company has implemented eDiscovery.

You create a security group named eDiscovery.

You need to ensure that users in the eDiscovery group can view all discoverable content.

What should you do?

- A. Add the eDiscovery group as site collection administrators for every site collection that contains discoverable content.
- B Grant Full Control permissions to eDiscovery administrators.
- B. Grant the eDiscovery group access to content in all web applications by using a web application user policy.
- C. Configure the eDiscovery center to use forms-based authentication.

Correct Answer: C

QUESTION 5

You have a SharePoint Server 2013 server farm. The farm contains the following servers:

Six front-end Web servers

Four application servers

Four databases servers

All of the databases in the farm are mirrored by using Microsoft SQL Server database mirroring.

The farm contains the following service applications:

PerformancePoint Service Application

Managed Metadata Service

The PerformancePoint Service Application is configured as shown in the PerformancePoint exhibit. (Click the Exhibit button.)

Edit PerformancePoint Service Application

Specify settings for this service application. You can change these settings later from the Manage Service Applications page.

Name:

Specify a name and default status for this service application.

The setting makes this service application available by default for web applications in this farm to use. Do not check this setting if you wish to specify manually which web applications should use this service application.

PerformancePoint Service Application
 Add this service application's proxy to the farm's default proxy list.

Use of the default database server and database name is recommended for most cases. Refer to the administrator's guide for advanced scenarios where specifying database information is required.

Database Server

Database Name

Database authentication
 Windows authentication (recommended)
 SQL authentication

Use of Windows authentication is strongly recommended. To use SQL authentication, specify the credentials which will be used to connect to the database.

Account

 Password

Failover Server

You can choose to associate a database with a specific failover server that is used in conjunction

Failover Database Server

The Managed Metadata Service application is configured as shown in Managed Metadata exhibit. (Click the Exhibit button.)
 Create New Managed Metadata Service

Specify the name, databases, application pool and content settings for this Managed Metadata Service. [Help](#)

Name

Name
