QUESTION 1

Your company has a main office and a branch office. The main office is located in Amsterdam. The branch office is located in New York. Each office has a data center.

The offices connect to each other by using a high-bandwidth, low-latency wide area network (WAN) link.

You have a Skype for Business Server 2015 infrastructure in both of the locations. The solution supports 5,000 users.

You plan to deploy a persistent chat infrastructure.

You need to ensure that persistent chat rooms remain available if a data center fails.

What should you do?

A. Create one Persistent Chat Server pool that contains one active chat server and one standby chat server.

B. Create one Persistent Chat Server pool that contains two active chat servers.

C. Create two Persistent Chat Server pools that each contains one active chat server.

D. Create two Persistent Chat Server pools that each contains one active chat server and one standby chat server.

Correct Answer: B

QUESTION 2

You support Skype for Business clients and servers in your customer's company network.

All computers are members of a single Active Directory Domain Services (AD DS) domain named contoso.local. The single front-end Skype for Business Server 2015 server is configured to support a Session Initiation Protocol (SIP) domain

named contoso.com.

You configure Skype for Business to support users from a new SIP domain named proseware.net.

The users of the new SIP domain report that the Skype for Business client is able to connect to the Skype for Business server only after manual configuration. Users of the Contoso.com SIP domain are able to connect to Skype for Business

server automatically, both internally and externally.

You need to restore the internal and external automatic discovery features for the users of the proseware.net SIP domain.

Which fully qualified domain name (FQDN) should you add to the subject alternative name (SAN) for each certificate? To answer, drag the appropriate FQDN to the correct certificate request. Each FQDN may be used once, more than once,

or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

FQDN

lyncdiscoverinternal.proseware.net

lyncdiscoverinternal.contoso.local

lyncdiscoverinternal.contoso.com

lyncdiscover.contoso.local

lyncdiscover.proseware.net

lyncdiscover.contoso.com

SAN entries

SAN for internal
Autodiscover Service URL

SAN for external
Autodiscover Service URL

Correct Answer:

FQDN

lyncdiscoverinternal.contoso.local

lyncdiscoverinternal.contoso.com

lyncdiscover.contoso.local

lyncdiscover.proseware.net

SAN entries

SAN for internal
Autodiscover Service URL   lyncdiscoverinternal.proseware.net

SAN for external
Autodiscover Service URL   lyncdiscover.contoso.com

QUESTION 3

You need to modify the FQDN of the external web services.

From which node should you perform the modification?

To answer, select the appropriate node in the answer area.

Hot Area:

Correct Answer:

Configure Web Services

Log on to the computer where Topology Builder is installed as a member of the Domain Admins group and the RTCUniversalServerAdmins group.

Start Topology Builder: Click Start, click All Programs, click Microsoft Lync Server 2013, and then click Lync Server

Topology Builder.

In Topology Builder, in the console tree under Standard Edition Front End Servers, Enterprise Edition Front End pools, and Directory pools, select the pool name.Right-click the name, click Edit Properties, and then click Web Services.

Add or edit the External Web Services FQDN, and then click OK.

QUESTION 4

You are deploying an Edge Server.

You need to configure the firewall to support the planned federation relationship.

Which port should you open between the Internet and the Edge Server? To answer, configure the appropriate protocol and port in the answer area.

Hot Area:

Answer Area

Protocol

▼
TCP
UDP

Port

▼
5060
5061
5066
5269

Correct Answer:

Answer Area

Protocol

▼
TCP
UDP

Port

▼
5060
5061
5066
5269

QUESTION 5

You have a Skype for Business Server 2015 infrastructure.

You plan to provide remote users with the ability to establish the following:

Peer-to-peer calls between themselves and users on the internal network

Chat sessions from mobile devices

You need to recommend which components you must configure to provide the required access to the remote users.

Which components should you recommend?

To answer, drag the appropriate component to the correct requirement in the answer area.

Each component may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

Select and Place:

Components	Answer Area
the Access Edge service	Peer-to-peer calls between themselves and users on the internal network — Component / Component
the A/V Edge service	
a reverse proxy	
the Web Conferencing Edge service	Chat sessions from mobile devices — Component
an XMPP Gateway	

Correct Answer:

Components	Answer Area
	Peer-to-peer calls between themselves and users on the internal network — the Access Edge service / the A/V Edge service
the Web Conferencing Edge service	Chat sessions from mobile devices — a reverse proxy
an XMPP Gateway	

Box 1: the Access Edge service Box 2: the A/V Edge Service Box 3: a reverse proxy

Note:

* The Edge Servers send and receive network traffic for the services offered by internal deployment by external users. The Edge Server runs the following services:

/Access Edge service The Access Edge service provides a single, trusted connection point for both outbound and inbound Session Initiation Protocol (SIP) traffic.

/Web Conferencing Edge service The Web Conferencing Edge service enables external users to join meetings that are hosted on your internal Lync Server 2013 deployment.

/A/V Edge service The A/V Edge service makes audio, video, application sharing, and file transfer available to external users. Your users can add audio and video to meetings that include external participants, and they can communicate using

audio and/or video directly with an external user in point-to-point sessions. The A/V Edge service also provides support for desktop sharing and file transfer.

Authorized external users can access the Edge Servers in order to connect to your internal Lync Server 2013 deployment, but the Edge Servers do not provide a means for any other access to the internal network.

* the A/V Edge servers are able to accept connections for peer-to-peer calls and conference calls.

* The Reverse Proxy server is an optional, external component that is not a Lync Server role and is not defined in the Lync Topology. The reason this component is considered optional is because without it deployed an external Lync client can

still connect to Lync and most features will function (IM, Presence, Calls, Desktop Sharing, etc) as will federated communications.

The reverse proxy is required for the following:

To allow users to connect to meetings or dial-in conferences using simple URLs

To enable external users to download meeting content

To enable external users to expand distribution groups

To allow the user to obtain a user-based certificate for client certificate based authentication

To enable remote users to download files from the Address Book Server or to submit queries to the Address Book Web Query service

To enable remote users to obtain updates to client and device software

To enable mobile devices to automatically discover Front End Servers offering mobility services

To enable push notifications to mobile devices from the Office 365 or Apple push notification services
