QUESTION 1

Your company has an Exchange Server 2016 organization. The organization contains three servers and 2,000 mailboxes.

The organization audits all access to user mailboxes.

The company's security policy has the following requirements:

Audit the name of each administrator who modifies the Exchange Server organization settings.

Reduce the amount of audit log information generated by a service account named Service1.

Create an audit entry when an administrator modifies the permissions of another administrative mailbox.

You need to identify which PowerShell cmdlets must be used to meet the requirements.

Which PowerShell cmdlet should you identify for each requirement? To answer, drag the appropriate cmdlets to the correct requirements. Each cmdlet may be used once, more than once or not at all. You may need to drag the split bar

between panes or scroll to view content.

QUESTION 2

You have an Exchange Server 2016 organization.

The organization contains three Mailbox servers named EX01, EX02, and EX03.

The servers are members of a database availability group (DAG).

You have a mailbox database named DB01. DB01 is replicated to EX01 and EX02.

You need to add a replica of DB01 to EX03. The replica must meet the following requirements:

-

Transaction log files must not be applied to the replica for seven days after they are generated.

-

Transaction log files must be preserved for one day after they are applied to the database copy. What command should you run? To answer, select the appropriate options in the answer area.

QUESTION 3

You are planning an Exchange Server 2016 organization. The organization will contain a Mailbox server named EX01.

Users will have primary SMTP email addresses in the following domains: Contoso.com Fabrikam.com Cohowinery.com Wingtiptoys.com

You need to add a DNS record to provide Autodiscover for each domain.

Which type of record should you create in each zone?

- A. CERT
- B. A
- C. MINFO
- D. PTR
- E. LOC
- F. MX
- G. TXT

Correct Answer: B

To configure Autodiscover DNS records, you use either an A record, a CNAME record or an SRV record.

Preference being A as its most commonly used, if that's not there choose SRV as this works where A is not possible (certificate only has 1 SAN) and if that's not there choose CNAME (can be used but can cause compatibility issues and cert

issues).

QUESTION 4

You have an Exchange Server 2016 organization. The organization contains several servers.

Users in the marketing department often send Information Rights Management (IRM)-protected email messages. The IRM-protected messages are excluded from eDiscovery searches.

You need to configure the Exchange Server Organization to ensure that the contents of the mailboxes of the marketing department users are searched for all messages that contain the word ProjectX. The solution must prevent the email messages from being deleted permanently.

Your user account is a member of the required role group.

Which three actions should you perform? Each correct answer present part of the solution.

- A. Run the New-Mailbox cmdlet
- B. Run the New-MailboxSearch cmdlet
- C. Run the Set-IRMConfiguration cmdlet
- D. Run the Search-Mailbox cmdlet
- E. Export the results from the discovery mailbox to a personal folders (PST) file, and then use Microsoft Outlook to open the PST file.
- F. Use Outlook on the web to open the discovery mailbox.

Correct Answer: BCE
