**QUESTION 1**

A company migrates to Office 365. 2,000 active users have valid Office 365 licenses assigned.

An additional 5,000 user accounts were created during the migration and testing processes. These users do not have any licenses assigned.

You need to remove the Office 365 user accounts that do not have any licenses assigned by using the least amount of administrative effort.

Which Windows PowerShell command should you run?

- A. `Get-MsolUser -All-EnabledFilter "DisabledOnly" | Remove-MsolUser -Force`
- B. `Get-MsolUser-EnabledFilter "DisabledOnly" | Remove-MsolUser -Force`
- C. `Get-MsolUser -All -UnlicensedUsersOnly | Remove-MsolUser -Force`
- D. `Get-MsolUser -UnlicensedUsersOnly | Remove-MsolUser?orce`

Correct Answer: C

Step 1: Get all unlicensed users:

The `Get-MsolUser` cmdlet can be used to retrieve an individual user, or list of users. We must use both the `?ll` and the `?nlicensedUsersOnly` parameters to retrieve all unlicensed users.

Parameters include:

All If present, then all results will be returned. `UnlicensedUsersOnly` The filter for only users who are not assigned a license.

Step 2: Remove these users through the `Remove-MsolUser ?orce` command.

QUESTION 2

You administer the Office 365 environment for a company that has offices around the world. All of the offices use the same Office 365 tenant.

You need to ensure that all users can access the services that are available in their regions.

Which of the following setting or service should you update?

- A. Service usage address
- B. User licenses
- C. User location settings
- D. Rights management

Correct Answer: C

**QUESTION 3**

A company uses Office 365 services. You implement Azure AD Connect in the local environment.

An employee moves to a new department. All Office 365 services must display the new department information for the employee.

You need to update the employee's user account.

Where should you change the value of the department attribute for the employee?

- A. the Active Directory management page in the Azure Management Portal
- B. the on-premises Active Directory
- C. the Users and groups page in the office 365 admin center
- D. the Metaverse Designer

Correct Answer: B

QUESTION 4

A company has an Office 365 tenant.

You must reset the password for an account named User1.

You need to ensure that the new password for the account meets complexity rules.

Which two passwords can you use? Each correct answer presents a complete solution.

- A. Summer2015
- B. May2015
- C. User1User1
- D. summer2015
- E. May 2015
- F. summer!@#\$
- G. M1crosoft

Correct Answer: AG

If the user is set to require a strong password, then all of the following rules must be met:

The password must contain at least one lowercase letter. The password must contain at least one uppercase letter. The password must contain at least one non-alphanumeric character. The password cannot contain any spaces, tabs, or

line

breaks. The length of the password must be 8-16 characters. The user name cannot be contained in the password.

QUESTION 5

You are the Office 365 administrator for a company. All employees have Active Directory Domain Services (AD DS) user accounts. All users accounts are part of an organizational unit (OU) and are members of a security group.

You deploy Azure Active Directory (Azure AD) Connect by using the Express Settings.

You plan to provision user accounts to Office 365. Only employee user accounts should be synchronized to Office 365.

You need to enable filtering for Azure AD Connect.

Which two types of filtering can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Domain-based
- B. OU-based
- C. Group-based
- D. Attribute-based

Correct Answer: BD

All four types of filtering can be used. However, domain-based and group-based filtering can only be configured on installation.
