**QUESTION 1**

A company's SharePoint environment contains three web applications.

The company must record the following information for each document in any of the three web applications:

The date and time at which the document was last reviewed. Additional custom date and time information as requirements are identified.

You have the following requirements:

Ensure that the current information is available when searching content and for refining search results.

Ensure that the additional custom date and time information can be assigned to content in all web applications.

Ensure that SharePoint users who are not farm administrators can record additional date and time information as required.

You need to meet the requirements.

What should you do?

- A. Create a column of data type Date and Time in a document library in each site collection.
- B. In Central Administration, create a term set with a term of data type Date and Time.
- C. Create a content type that uses a custom field of data type Date and Time in each site collection.
- D. Create a site column of data type Date and Time in each site collection.

Correct Answer: B

QUESTION 2

You provision and configure a new SharePoint farm. The content databases are stored in Microsoft SQL Server 2012.

You need to configure the databases for high availability.

Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Configure database mirroring for automatic failover.	
Enable AlwaysOn and Named Pipes on the server.	
Configure the content databases as read-only.	
Create a Windows Server failover cluster.	
Add the necessary databases to the availability group.	
Create and configure an availability group for the relevant nodes.	

Correct Answer:

	Answer Area
Configure database mirroring for automatic failover.	Create a Windows Server failover cluster.
	Enable AlwaysOn and Named Pipes on the server.
Configure the content databases as read-only.	Create and configure an availability group for the relevant nodes.
	Add the necessary databases to the availability group.

QUESTION 3

You upgrade a SharePoint Server 2010 server farm to SharePoint Server 2013. Several users report that a site collection site has the visual elements of SharePoint Server 2010.

You need to ensure that the site collection uses the visual elements of SharePoint Server 2013.

Which cmdlet should you run?

- A. Repair-SPSite
- B. Restore-SPSite

C. Upgrade-SPSite

D. Copy-SPSite

Correct Answer: C

QUESTION 4

An organization has an Active Directory Domain Services (AD DS) domain and a SharePoint intranet site.

You need to ensure that only members of the AD DS security group named Managers can create personal sites.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

The screenshot shows a configuration tool interface with the following elements:

- Answer Area:** A header box on the right side of the interface.
- Action List:** A vertical list of seven yellow boxes on the left, each containing a task:
 - Run the SharePoint 2013 Product Configuration wizard.
 - Configure user permissions for the User Profile service application.
 - Sign in to Central Administration.
 - Manage permissions for the Secure Store service application.
 - Configure site app permissions for the intranet site collection.
 - Manage settings for the User Profile service application.
 - Sign in to the intranet site collection.

Correct Answer:

Run the SharePoint 2013 Product Configuration wizard.

Manage permissions for the Secure Store service application.

Configure site app permissions for the intranet site collection.

Sign in to the intranet site collection.

Answer Area

Sign in to Central Administration.

Manage settings for the User Profile service application.

Configure user permissions for the User Profile service application.

QUESTION 5

You need to resolve the authentication issue that occurs in the SharePoint environment. What should you do?

- A. Use classic mode authentication and set the authentication type to Kerberos.
- B. Deploy the Secure Store Service.
- C. Use the Open Authorization 2.0 (OAuth 2.0) web authorization protocol.
- D. Use the Distributed Cache service.

Correct Answer: D
