QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2 and has the Web Server (IIS) server role installed.

Server1 has a web site named Web1. Web1 is configured to use digest authentication.

You need to ensure that a user named User1 can access Web1.

What should you do from Active Directory Users and Computers?

A. From the properties of User1, select Store password using reversible encryption.

B. From the properties of User1, select Use Kerberos DES encryption types for this account.

C. From the properties of Server1, select Trust this computer for delegation to any service (Kerberos only).

D. From the properties of Server1, assign the Allowed to Authenticate permission to User1.

Correct Answer: A

Challenge Handshake Authentication Protocol (CHAP) is a basic level of iSCSI security that is used to authenticate the peer of a connection and is based upon the peers sharing a secret: that secret being a password. To make sure that User1 can connect to the server, you should use Active Directory Users and Computers to store that password.

QUESTION 2

You have a laptop named Computer1. Computer1 runs Windows 8.1 Enterprise.

Computer1 has a wired network adapter and a wireless network adapter. Computer1 connects to a wireless network named Network1.

For testing purposes, you install Windows Server 2012 R2 on Computer1 as a second operating system. You install the drivers for the wireless network adapter.

You need to ensure that you can connect to Network1 from Windows Server 2012 R2.

What should you do?

A. Restart the WLAN AutoConfig service.

B. From a local Group Policy object (GPO), configure the Wireless Network (IEEE 802.11) Policies settings.

C. From a local Group Policy object (GPO), configure the settings of Windows Connection Manager.

D. From Server Manager, install the Wireless LAN Service feature.

Correct Answer: D

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. Server1 runs Windows Server 2012 R2 and has the Hyper-V server role installed. On Server1, you create and start a virtual machine named VM1. VM1 is configured as shown in the following table.

Setting	Configuration
Minimum RAM	2048 MB
Maximum RAM	4096 MB
Disk type	Fixed size
Disk size	100 GB

You need to recommend a solution to minimize the amount of disk space used for the checkpoint of VM1. What should you do before you create the checkpoint?

A. Run the Resize-VHD cmdlet.

B. Convert Disk1.vhd to a dynamically expanding disk.

C. Shut down VM1.

D. Run the Convert-VHD cmdlet.

Correct Answer: C

Changing between a fixed and dynamic disk type does not alter the size of a SNAPSHOT much at all.

However, since a snapshot is a record of a VMs state at the exact time that the snapshot was taken, shutting down the VM before taking the snapshot prevents the snapshot from having to contain all of the data in RAM (as there is no data in

memory when a machine is powered down).

The question states that the solution should minimize the amount of disk space used for the checkpoint of VM1. If the checkpoint is taken while VM1 is running, there will be two attritional files present at the checkpoint location; a .VSV with

VM1 saved state files and a .BIN file which contains VM1\\'s memory contents. If, however, VM1 is shut down first, these files will not be created, thus saving disk space.

In order to convert Disk1.vhd to a dynamically expanding disk, VM1 still have to be shut down.

QUESTION 4

You have a server named Server1 that runs Windows Server 2012 R2.

You connect three new hard disks to Server1.

You need to create a storage space that contains the three disks.

The solution must meet the following requirements:

Provide fault tolerance if a single disk fails.

Maximize the amount of files that can be stored in the storage space.

What should you create?

A. A simple space

B. A spanned volume

C. A mirrored space

D. A parity space

Correct Answer: D

Fault tolerant and better space ratio

Parity spaces are designed for capacity efficiency and increased resiliency. Parity spaces are best suited for archival data and streaming media, such as music and videos.

QUESTION 5

You have 10 domain controllers in a domain.

You need to prevent several members of domain admin groups from logging on the domain controller.

Which two objects should you create and configure?

A. GPO to the domain

B. authentication policy

C. authentication policy silo

D. a central access policy

E. a user certificate

Correct Answer: BC
