QUESTION 1

You have a server named Server1 that runs Windows Server 2012 R2.

Server1 has three physical network adapters named NIC1, NIC2, and NIC3.

On Server1, you create a NIC team named Team1 by using NIC1 and NIC2. You configure Team1 to accept network traffic on VLAN 10.

You need to ensure that Server1 can accept network traffic on VLAN 10 and VLAN 11. The solution must ensure that the network traffic can be received on both VLANs if a network adapter fails.

What should you do?

- A. From Server Manager, change the load balancing mode of Team1.
- B. Run the New-NetLbfoTeam cmdlet.
- C. From Server Manager, add an interface to Team1.
- D. Run the Add-NetLbfoTeamMember cmdlet.

Correct Answer: C

QUESTION 2

You have a laptop named Computer1. Computer1 runs Windows 8.1 Enterprise.

Computer1 has a wired network adapter and a wireless network adapter. Computer1 connects to a wireless network named Network1.

For testing purposes, you install Windows Server 2012 R2 on Computer1 as a second operating system. You install the drivers for the wireless network adapter.

You need to ensure that you can connect to Network1 from Windows Server 2012 R2.

What should you do?

- A. Restart the WLAN AutoConfig service.
- B. From a local Group Policy object (GPO), configure the Wireless Network (IEEE 802.11) Policies settings.
- C. From a local Group Policy object (GPO), configure the settings of Windows Connection Manager.
- D. From Server Manager, install the Wireless LAN Service feature.

Correct Answer: D

The Wireless LAN service is a feature in Windows Server 2012 R2 that you can use to enable the wireless WLAN AutoConfig service, and to configure the WLAN AutoConfig service for automatic startup. Once enabled, the WLAN

AutoConfig service dynamically selects which wireless network the computer automatically connects to, and configures the necessary settings on the wireless network adapter. This includes automatically selecting and connecting to a more

preferred wireless network when one becomes available.

To enable the Wireless LAN Service

In Server Manager Dashboard, click Manage, and then click Add Roles and Features. The Add Roles and Features Wizard opens.

Click Next. In Select installation type, select Role-based or feature-based installation, and then click Next.

In Select destination server, enable Select a server from the server pool, and in Server Pool, select the server for which you want to enable the Wireless LAN Service, and then click Next.

In Select server roles, click Next.

In Select Server features, in Features, select Wireless LAN Service, and then click Next.

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains a user account named User1 that resides in an organizational unit (OU) named OU1.

A Group Policy object (GPO) named GPO1 is linked to OU1. GPO1 is used to publish several applications to a user named User1.

In the Users container, you create a new user named User2.

You need to ensure that the same applications are published to User2.

What should you do?

- A. Modify the settings in GPO1.
- B. Move User2 to OU1
- C. Link a WMI filter to GPO1.
- D. Modify the security of GPO1.

Correct Answer: B

Moving User2 to OU1 will give him the same access as User1.

The GPO is linked to OU1. By moving User2 to OU1 the GPO will be applied to this user.

QUESTION 4

Your network contains an Active Directory domain named adatum.com. The network contains a member server that runs Windows Server 2012 R2.

You log on to the member server by using the built-in domain Administrator account.

When you run the Active Directory Administrative Center and attempt to move an organizational unit (OU) named OU-01, you receive an Access Denied message.

The permissions for OU-01 are shown in the exhibit. (Click the Exhibit button.)

The screenshot shows the Active Directory Administrative Center interface for OU-01. The 'Security' tab is selected, displaying a list of groups and users with their permissions. The 'Domain Admins (ADATUM\Domain Admins)' group is selected, and its permissions are shown in a table below. The permissions are:

| Permissions for Domain Admins | Allow | Deny |
|-------------------------------|-------------------------------------|--------------------------|
| Full control | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Read | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Write | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Create all child objects | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Delete all child objects | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

Below the table, there is a link to 'Learn about access control and permissions' and an 'Advanced' button.

You need to ensure that you can move OU-01. What should you do?

- A. Take ownership of OU-01.
- B. Modify the Protect object from accidental deletion setting of OU-01.
- C. Run the Active Directory Administrative Center by using an elevated command prompt.
- D. Add the Administrator account to the Managed By property of OU-01.

Correct Answer: B

Each new Organizational Unit (OU) that you create within Active Directory has the Protect object from accidental deletion setting enabled by default. This means that when you move the OU to Active Directory, you will receive an error like Windows cannot move object because: Access is denied, even if you have full AD administration rights.

QUESTION 5

Drag and Drop Question

You plan to deploy a DHCP server that will support four subnets. The subnets will be configured as shown in the following table.

| Subnet name | Number of hosts |
|-------------|-----------------|
| Subnet1 | 100 |
| Subnet2 | 45 |
| Subnet3 | 800 |
| Subnet4 | 300 |

You need to identify which network ID you should use for each subnet. What should you identify? To answer, drag the appropriate network ID to the each subnet in the answer area.

Select and Place:

Network IDs

- 172.23.1.0/26
- 172.23.8.0/22
- 172.23.16.0/25
- 172.23.128.0/23

Answer Area

- Subnet1: Network ID
- Subnet2: Network ID
- Subnet3: Network ID
- Subnet4: Network ID

Correct Answer:

Network IDs

-
-
-
-

Answer Area

- Subnet1: 172.23.16.0/25
- Subnet2: 172.23.1.0/26
- Subnet3: 172.23.8.0/22
- Subnet4: 172.23.128.0/23
