QUESTION 1

You have a server named Server1 that runs Windows Server 2012 R2.

You create a Data Collector Set (DCS) named DCS1.

You need to configure DCS1 to log data to D:\logs.

What should you do?

A. Right-click DCS1 and click Data Manager...

B. Right-click DCS1 and click SaveTemplate...

C. Right-click DCS1 and click Properties.

D. Right-click DCS1 and click Export list...

Correct Answer: C

It is under the Directory tab from the DCS properties. http://technet.microsoft.com/en-us/library/cc749267.aspx

QUESTION 2

Which group policy item should you configure to enable automatic reenrollment of certificates?

A. Certificate Path Validation Settings

B. Certificate Services Client - Certificate Enrollment Policy

C. Certificate Services Client - Auto-Enrollment

D. Trusted Root Certification Authorities

Correct Answer: C

QUESTION 3

You have a server named File1 that runs Windows Server 2012 R2.

File1 has the File Server role service installed.

You plan to back up all shared folders by using Microsoft Online Backup.

You download and install the Microsoft Online Backup Service Agent on File1.

You need to ensure that you use Windows Server Backup to back up data to Microsoft Online Backup.

What should you do?

A. From Computer Management, add the File1 computer account to the Backup Operators group.

B. From Windows Server Backup, run the Register Server Wizard.

C. From acommand prompt, run wbadmin.exe enable backup.

D. From the Services console, modify the Log On settings of the Microsoft Online Backup Service Agent.

Correct Answer: B

To register a server for use with Windows Azure Backup you must run the register server wizard Incorrect Answers:

A: Enables you to back up and restore your operating system, volumes, files, folders, and applications from a command prompt.

QUESTION 4

You are employed as a network administrator at ABC.com.

ABC.com has an Active Directory domain named ABC.com.

All servers on the ABC.com network have Windows Server 2012 R2 installed.

You have been instructed to configure a custom Windows Recovery Environment (Windows RE) image that should allow for a drive is mapped automatically to a network share in the event that a server is started using the image.
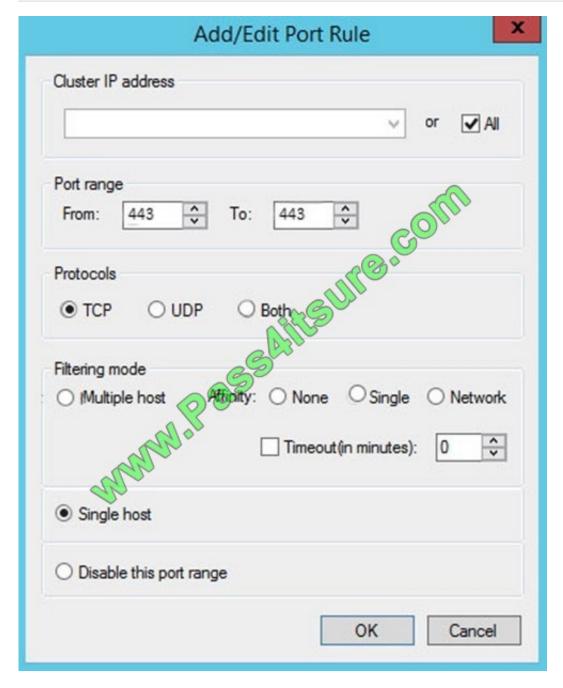

Which of the following actions should you take?

A. You should consider configuring the startnet.cmd in the image

B. You should consider configuring the startup.exe command included in the image.

C. You should consider configuring the ntdsutil command included in the image.

D. You should consider configuring the certutil.exe command included in theimage.

Correct Answer: A

QUESTION 5

You configure the nodes to use the port rule shown in the exhibit. (Click the Exhibit button.)

You need to configure the NLB cluster to meet the following requirements: HTTPS connections must be directed to Server1 if Server1 is available.

HTTP connections must be load balanced between the two nodes.

Which three actions should you perform? (Each correct answer presents part of the solution. Choose three.)

A. From the host properties of Server2, set the Handling priority of the existing port rule to 2.

B. Create a port rule for TCP port 80. Set the Filtering mode to Multiple host and set the Affinity to None.

C. Create an additional port rule for TCP port 443. Set the Filtering mode to Multiple host and set the Affinity to Single.

D. From the host properties of Server1, set the Handling priority of the existing port rule to 2.

E. From the host properties of Server2, set the Priority (Unique host ID) value to 1.

F. From the host properties of Server1, set the Handling priority of the existing port rule to 1.

Correct Answer: ABF

Multiple hosts. This parameter specifies that multiple hosts in the cluster handle network traffic for the associated port rule. This filtering mode provides scaled performance in addition to fault tolerance by distributing the network load among multiple hosts. You can specify that the load be equally distributed among the hosts or that each host handle a specified load weight.

Note: Handling priority: When Single host filtering mode is being used, this parameter specifies the local host\\'s priority for handling the networking traffic for the associated port rule. The host with the highest handling priority (lowest numerical value) for this rule among the current members of the cluster will handle all of the traffic for this rule. The allowed values range from 1, the highest priority, to the maximum number of hosts allowed (32). This value must be unique for all hosts in the cluster.

Reference: Network Load Balancing parameters.
