QUESTION 1

DRAG DROP

Your network contains an Active Directory forest. The forest contains two domains named adatum.com and litwareinc.com.

You need to perform the following migration tasks:

1.

User accounts must be copied from the litwareinc.com domain to the adatum.com domain.

2.

Client computers must be moved from litwareinc.com to adatum.com.

The solution must ensure that all of the user settings are retained after the migration is completed.

Which tool should you use to perform each task?

To answer, drag the appropriate tool to the correct migration task in the answer area. Each tool may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

Select and Place:

Tools	Answer Area
Active Directory Migration Tool (ADMT)	Tool Copy user accounts from the litwareinc.com domain to the adatum.com domain.
Microsoft Deployment Toolkit (MDT)	Tool Move the client computers from litwareinc.com to adatum.com.
User State Migration Tool (USMT)	
Windows Server Migration Tools	

Correct Answer:

Tools	Answer Area
Active Directory Migration Tool (ADMT)	Active Directory Migration Tool (ADMT) Copy user accounts from the litwareinc.com domain to the adatum.com domain.
Microsoft Deployment Toolkit (MDT)	Active Directory Migration Tool (ADMT) Move the client computers from litwareinc.com to adatum.com.
User State Migration Tool (USMT)	
Windows Server Migration Tools	

Copy user accounts from the litwareinc.com domain to the adatum.com domain - Active Directory Migration Tool Move client computers from litwareinc.com to adatum.com - Active Directory Migration Tool <https://support.microsoft.com/en-us/help/555229> [https://technet.microsoft.com/en-us/library/cc974332\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/cc974332(v=ws.10).aspx)

QUESTION 2

Your company has two main offices and 10 branch offices. Each office is configured as a separate Active Directory site.

The main offices sites are named Site1 and Site2. Each office connects to Site1 and Site2 by using a WAN link. Each site contains a domain controller that runs Windows Server 2008 R2.

You are redesigning the Active Directory infrastructure.

You plan to implement domain controllers that run Windows Server 2012 R2 and decommission all of the domain controllers that run Windows Server 2008 R2.

You need to recommend a placement plan for the Windows Server 2012 R2 domain controllers to meet the following requirements:

1. Ensure that users can log on to the domain if a domain controller or a WAN link fails.
 2. Minimize the number of domain controllers implemented.
- What should you include in the recommendation? (Each correct answer presents part of the solution. Choose two.)
- A. Read-only domain controllers (RODCs) in the branch office sites
 - B. A writable domain controller in Site1
 - C. A writable domain controller in Site2
 - D. Writable domain controllers in the branch office sites

Correct Answer: BC

QUESTION 3

In the domain, you deploy a domain controller that runs Windows Server 2012.

You need to recommend changes to the Active Directory environment to ensure that the domain controller deployment supports the planned changes.

What should you include in the recommendation?

- A. Transfer the infrastructure master role.
- B. Raise the functional level of the domain.
- C. Raise the functional level of the forest.
- D. Transfer the PDC emulator role.

Correct Answer: D

Deploy all new domain controllers by using domain controller cloning.

The PDC emulator needs to be on a domain controller running Windows Server 2012.

QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft System Center 2012 infrastructure. The domain contains two sites named Site1 and Site2. The sites connect to each other by using a 1-Mbps WAN link.

The sites contain four servers. The servers are configured as shown in the following table.

Server name	Site	Configuration
Server1	Site1	<ul style="list-style-type: none">• Windows Server 2012• Virtual Machine Manager (VMM)• Windows Deployment Services (WDS)
Server2	Site1	<ul style="list-style-type: none">• Windows Server 2008 R2• Virtual Machine Manager (VMM) library
Server3	Site1	<ul style="list-style-type: none">• Windows Server 2012• Hyper-V
Server4	Site2	<ul style="list-style-type: none">• Windows Server 2012

In Site2, you plan to deploy 50 Hyper-V hosts.

You need to recommend a solution to deploy the Hyper-V hosts by using VMM. The solution must minimize the amount of traffic between Site1 and Site2 during deployment.

What should you recommend?

- A. On Server4, install VMM. From the Virtual Machine Manager console, add Server1 as a PXE server and add Server4 as a library server.
- B. On Server4/ install VMM. From the Virtual Machine Manager console, add Server1 as a PXE server and a library server.
- C. On Server4, install WDS. From the Virtual Machine Manager console, add Server4 as a PXE server and a library server.
- D. On Server4, install WDS. From the Virtual Machine Manager console, add Server4 as a PXE server and add Server1 as a library server.

Correct Answer: C

QUESTION 5

You work for a company named ABC.com. Your role of Network Administrator includes the management of the company's Windows 2012 Active Directory Domain Services (AD DS) domain. All servers in the network run Windows Server 2012. The network includes a Windows Server 2012 server named TK-File1. TK-File1 runs the File and Storage Services server role.

You need to increase the file storage space on TK-File1. You attach four new physical hard disks to TK-File1. You need to configure the disks to ensure that no data is lost in the event of a single disk failure while maximizing the storage space that can be used on the disks.

How should you configure the disks?

- A. Create two storage pools each with two physical disks then create a storage space using the mirror option.
- B. Create a single storage pool using all four disks then create a storage space using the mirror option.
- C. Create a single storage pool using all four disks then create a storage space using the parity option.
- D. Create four storage pools each with one physical disk then create a storage space using the parity option.

Correct Answer: C
