**QUESTION 1**

You work for a company named ABC.com. Your role of Network Administrator includes the management of the company's Windows 2012 Active Directory Domain Services (AD DS) domain. All servers in the network run Windows Server 2012. All client computers run either Windows 7 or Windows 8. All client computers run Windows Defender. Currently all client computers are configured to download the latest Windows Defender antivirus definitions every night.

You want to implement a centralized solution for the management of the Windows Defender updates. Your solution must reduce the bandwidth used for downloading the updates and minimize costs.

What should you use to manage the Windows Defender antivirus definitions?

- A. Microsoft System Center 2012 Operations Manager
- B. Windows Server Update Services (WSUS)
- C. Microsoft System Center 2012 Endpoint Protection
- D. Microsoft System Center 2012 Configuration Manager

Correct Answer: B

**QUESTION 2**

You work for a company named ABC.com. Your role of Network Administrator includes the management of the company's Windows 2012 Active Directory Domain Services (AD DS) domain. All servers in the network run Windows Server 2012. You are configuring Windows Deployment Services (WDS) to deploy 80 new Windows Server 2012 servers.

You plan to deploy 40 servers running the Full Installation of Windows Server 2012 and 40 servers running the Server Core installation of Windows Server 2012. Some servers running the full installation will be configured as Domain Controllers running the Active Directory Domain Services and DNS Server roles. The remaining servers running the full installation will be configured as file servers running the File and Storage Services role. Some servers running the server core installation will be configured virtual machine host servers running the Hyper-V role. The remaining servers running the server core installation will be configured as web servers running the Web Server (IIS) role.

Which of the following describes the minimum number of images you need to create to deploy the servers?

- A. Two images in total ?one image for the Full Installations and one image for the Server Core Installations.
- B. Two images in total ?one image for the Domain Controllers and one image for all other installations.
- C. Three images in total ?one image for the Domain Controllers, one image for the other Full Installations and one image for the Server Core Installations.
- D. Four images in total ?one image for each server role configuration.
- E. One image in total for all configurations.

Correct Answer: E

**QUESTION 3**

Your company has a main office that contains several servers and several users. The main office contains a file server named Server1 that runs Windows Server 2012 R2.

The users access a large report file that is created on Server1 each day.

The company plans to open a new branch office. The branch office will contain only client computers.

You need to implement a solution to reduce the amount of bandwidth used by the client computers in the branch office to download the report each day.

What should you do?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Install the BranchCache for network files role service on Server1. Configure the client computers to use BranchCache in hosted cache mode.
- B. Configure the offline settings of the shared folder that contains the report.
- C. Install the BranchCache for network files role service on Server1. Configure the client computers to use Branchcache in distributed mode.
- D. Enable the Background Intelligent Transfer Service (BITS) feature on Server1 and on each client computer in the branch office. Move the report to a web folder.

Correct Answer: C

Distributed cache mode. In this mode, branch office client computers download content from the content servers in the main office and then cache the content for other computers in the same branch office. Distributed cache mode does not require a server computer in the branch office.

---

**QUESTION 4**

You plan to simplify the organizational unit (OU) structure for a company. You must consolidate all member servers in the domain to a single OU named MemberServers. You must apply Group Policy settings for servers that meet the following criteria:

1.

Server operating systems: Windows Server 2012

2.

Server hardware platform: 64-bit

3.

Server memory: less than 16 GB of RAM

Solution: You create a WMI filter action that includes the following query:

**select \* from Win32\_OperatingSystem where Version like "6.2%" and ProductType="3" and not OSArchitecture = "64-bit" WHERE Win32\_PhysicalMemory < 1600000000**

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

### QUESTION 5

Your network contains an Active Directory forest named contoso.com. The forest contains one domain. All domain controllers run Windows Server 2012. The functional level of the forest and the domain is Windows Server 2012.

Domain controller name	Role
DC1	Schema operations master Domain naming operations master Global catalog server
DC2	Infrastructure operations master
DC3	Relative identifier (RID) operations master PDC emulator operations master

The domain contains three domain controllers. The domain controllers are configured as shown in the following table. In the forest, you plan to add a new domain controller that runs Windows Server 2012 R2.

You need to prepare the environment before you add the new domain controller.

#### Answer Area

**Adprep /forestprep**

**Adprep /domainprep**

**Adprep /rodcprep**

Which domain controllers must be available to run each command? To answer, select the appropriate domain controllers in the answer area.

Hot Area:

**Answer Area**

**Adprep /forestprep**

Dropdown menu with options: DC1, DC2, DC3

**Adprep /domainprep**

Dropdown menu with options: DC1, DC2, DC3

**Adprep /rodcp**

Dropdown menu with options: DC1 AND DC2, DC1 AND DC3, DC2 AND DC3

Correct Answer:

**Answer Area**

**Adprep /forestprep**

Dropdown menu with options: DC1, DC2, DC3

**Adprep /domainprep**

Dropdown menu with options: DC1, DC2, DC3

**Adprep /rodcp**

Dropdown menu with options: DC1 AND DC2, DC1 AND DC3, DC2 AND DC3

\*

adprep /forestprep

Must be run on the schema operations master for the forest (here DC1).

Once for the entire forest

\*

adprep /domainprep

Must be run on the infrastructure operations (DC2) master for the domain.

\*

adprep /rodcp

Can be run from any computer. This command performs operations remotely. For the operations to complete successfully, the domain naming operations master 1) for the forest and the infrastructure operations master (DC2) for

each

application directory partition and each domain partition must be accessible.

Reference: Running Adprep.exe
