**QUESTION 1**

After you answer a question in this section, you will not be able to return to it. As a result, these questions will not appear in the review screen.

You plan to simplify the organizational unit (OU) structure for a company. You must consolidate all member servers in the domain to a single OU named MemberServers. You need to apply Group Policy settings for servers that meet the following criteria:

1.

Server operating systems: Windows Server 2012

2.

Server hardware platform: 64-bit

3.

Server memory: less than 16 GB of RAM

Solution: You create a WMI filter action that includes the following query:

```
select * from Win32_OperatingSystem where Version like "6.2%" and ProductType="3" and not OSArchitecture = "64-bit" where Win32_PhysicalMemory
```

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

References: [https://technet.microsoft.com/en-us/library/jj899801\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/jj899801(v=ws.11).aspx)

QUESTION 2

You need to recommend a deployment method for Proseware.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

A. A WDS Deployment server and Multicast transmissions

B. A WDS Deployment server and Unicast transmissions

C. A WDS Transport server and Multicast transmissions

D. A WDS Transport server and Unicast transmissions

Correct Answer: A

Consider implementing multicasting if your organization:

Has network routers that support multicasting.

Is a large company that requires many concurrent client installations. Wants to use network bandwidth efficiently. This is because with this feature, images are sent over the network only once, and you can specify limitations (for example, to only use 10 percent of your bandwidth).

Has enough disk space on client computers for the image to be downloaded.

QUESTION 3

You need to configure Active Directory Domain Services to support App1. What should you do?

- A. Deploy a read-only domain controller in the Madrid office by running the Windows PowerShell cmdlet Install-ADDSDomain controller with the -NoGlobalCatalog parameter.
- B. Remove the Read permission from the custom Active Directory attributes for the Domain Users group.
- C. Add a custom Active Directory attribute to the filtered attribute set.
- D. Add a custom Active Directory attribute to the partial attribute set.

Correct Answer: C

QUESTION 4

Your network contains an Active Directory domain named adatum.com.

You plan to implement several security settings to several public computers in a guest area. The company's security policy states that the security settings should be applied when any user logs on to the public computers.

You need to recommend a Group Policy strategy for the planned deployment.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Loopback processing
- B. WMI filtering
- C. Security filtering
- D. Block inheritance

Correct Answer: A

<https://support.microsoft.com/en-za/kb/231287>

**QUESTION 5**

You need to recommend a solution for DHCP logging. The solution must meet the technical requirement.

What should you include in the recommendation?

- A. Event subscriptions
- B. IP Address Management (IPAM)
- C. DHCP audit logging
- D. DHCP filtering

Correct Answer: B

*

Scenario: A central log of the IP address leases and the users associated to those leases must be created.

*

Feature description IPAM in Windows Server 2012 is a new built-in framework for discovering, monitoring, auditing, and managing the IP address space used on a corporate network. IPAM provides for administration and monitoring of servers running Dynamic Host Configuration Protocol (DHCP) and Domain Name Service (DNS). IPAM includes components for:

1.

Automatic IP address infrastructure discovery: IPAM discovers domain controllers, DHCP servers, and DNS servers in the domains you choose. You can enable or disable management of these servers by IPAM.

2.

Custom IP address space display, reporting, and management: The display of IP addresses is highly customizable and detailed tracking and utilization data is available. IPv4 and IPv6 address space is organized into IP address blocks, IP address ranges, and individual IP addresses. IP addresses are assigned built-in or user-defined fields that can be used to further organize IP address space into hierarchical, logical groups.

3.

Audit of server configuration changes and tracking of IP address usage: Operational events are displayed for the IPAM server and managed DHCP servers. IPAM also enables IP address tracking using DHCP lease events and user logon events collected from Network Policy Server (NPS), domain controllers, and DHCP servers. Tracking is available by IP address, client ID, host name, or user name.

4.

Monitoring and management of DHCP and DNS services: IPAM enables automated service availability monitoring for Microsoft DHCP and DNS servers across the forest. DNS zone health is displayed, and detailed DHCP server and scope management is available using the IPAM console.
