**QUESTION 1**

You work for a company named ABC.com. Your role of Network Administrator includes the management of the company's Active Directory Domain Services (AD DS) domain. You have recently upgraded the company's Windows Server 2008 R2 servers to Windows Server 2012.

You now plan to deploy additional Windows Server 2012 servers. You plan to use the Windows Assessment and Deployment Kit (Windows ADK) suite of tools and the Windows Deployment Services (WDS) server role for the management and deployment of server images to new servers.

By using Windows ADK and WDS, which of the following will you NOT be able to achieve?

- A. You will not be able to add software packages to the server deployment images.
- B. You will not be able to add drivers to the server deployment images.
- C. You will not be able to perform Wake On LAN zero touch installations on bare-metal servers.
- D. You will not be able to modify the server deployment images.

Correct Answer: C

**QUESTION 2**

You need to perform the directory synchronization with Office 365.

What should you do first?

- A. Set the domain functional level to Windows Server 2012.
- B. Upgrade the Office 365 licenses to Enterprise E4.
- C. Set the forest functional level to Windows Server 2012.
- D. Create a site-to-site VPN.
- E. Install the DirSync utility in the on-premises environment.

Correct Answer: E

**QUESTION 3**

You need to recommend a solution for the RODC.

Which attribute should you include in the recommendation?

- A. systemFlags
- B. searchFlags
- C. policy-Replication-Flags
- D. flags

Correct Answer: B

\*

Scenario: Deploy a read-only domain controller (RODC) to the London office

\*

The read-only domain controller (RODC) filtered attribute set (FAS) is a set of attributes of the Active Directory schema that is not replicated to an RODC. If you have data that you do not want to be replicated to an RODC in case it is stolen,

you can add these attributes to the RODC FAS. If you add the attributes to the RODC FAS before you deploy the first RODC, the attributes are never replicated to any RODC.

/ To decide which attributes to add to the RODC FAS, review any schema extensions that have been performed in your environment and determine whether they contain credential-like data or not. In other words, you can exclude from

consideration any attributes that are part of the base schema, and review all other attributes. Base schema attributes have the systemFlags attribute value 16 (0x10) set.

Reference: Customize the RODC Filtered Attribute Set

---

#### QUESTION 4

Your network contains a Hyper-V host named Host1 that runs Windows Server 2012. Host1 contains a virtual machine named DC1. DC1 is a domain controller that runs Windows Server 2012.

You plan to clone DC1.

You need to recommend which steps are required to prepare DC1 to be cloned.

What should you include in the recommendation? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Run `dcpromo.exe /adv`.
- B. Create a file named `Dccloneconfig.xml`.
- C. Add DC1 to the Cloneable Domain Controllers group.
- D. Run `sysprep.exe /oobe`.
- E. Run `New-VirtualDiskClone`.

Correct Answer: BC

B: DCCloneConfig.xml is an XML configuration file that contains all of the settings the cloned DC will take when it boots. This includes network settings, DNS, WINS, AD site name, new DC name and more. This file can be generated in a few different ways.

C: There's a new group in town. It's called Cloneable Domain Controllers and you can find it in the Users container. Membership in this group dictates whether a DC can or cannot be cloned. This group has some permissions set on the domain head that should not be removed. Removing these permissions will cause cloning to fail. Also, as a best practice, DCs shouldn't be added to the group until you plan to clone and DCs should be removed from the group once cloning is complete. Cloned DCs will also end up in the Cloneable Domain Controllers group. Make sure to remove those as well.

## QUESTION 5

### HOTSPOT

You run the ldifde command and receive the following output:

```
C:\Users\Admin1> ldifde -f Export.ldif -d "CN=Schema,CN=Configuration,DC=contoso,DC=com"
Connecting to "Server01.contoso.com"
Logging in as current user using SSPI
Exporting directory to file Export.ldif
Searching for entries...
Writing out entries.....
1739 entries exported
```

The command completes successfully.

Use the drop-down menus to select the answer choice that completes each statement.

Hot Area:

### Answer Area

The Active Directory [answer choice] was exported from the contoso.com domain.

configuration
default naming context
rootDSE
schema

At a minimum, the user who performed the operation is a member of [answer choice]

Domain Admins
Domain Users
Enterprise Admins
Schema Admins

Correct Answer:

### Answer Area

The Active Directory [answer choice] was exported from the contoso.com domain.

At a minimum, the user who performed the operation is a member of [answer choice]
