**QUESTION 1**

Your network contains an Active Directory domain named contoso.com. The domain contains a member server named Server 1. Server1 runs Windows Server 2012 R2 and has the Hyper-V server role installed. You create an external virtual

switch named Switch1.

Switch1 has the following configurations:

Connection type: External network

Single-root I/O virtualization (SR-IOV): Enabled

Ten virtual machines connect to Switch1.

You need to ensure that all of the virtual machines that connect to Switch1 are isolated from the external network and can connect to each other only. The solution must minimize network downtime for the virtual machines.

What should you do?

- A. Remove Switch1 and recreate Switch1 as an internal network.
- B. Change the Connection type of Switch1 to Private network.
- C. Change the Connection type of Switch1 to Internal network.
- D. Remove Switch1 and recreate Switch1 as a private network.

Correct Answer: B

You can change the connection type of a virtual switch from the virtual switch manager without having to remove it.

A private virtual network is isolated from all external network traffic on the virtualization server, as well any network traffic between the management operating system and the external network.

This type of network is useful when you need to create an isolated networking environment, such as an isolated test domain.

QUESTION 2

Your company has three main offices named Main1, Main2, and Main3.

The network contains an Active Directory domain named contoso.com.

Each office contains a help desk group.

You plan to deploy Microsoft System Center 2012 Configuration Manager to meet the following requirements:

The members of the Domain Admins group must be able to manage all of the Configuration Manager settings.

The help desk groups must be able to manage only the client computers in their respective office by using Configuration Manager.

You need to recommend a Configuration Manager infrastructure to meet the requirements.

Which infrastructure should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Three sites that contain one collection for each office
- B. One site that contains one collection C. Three sites that each contain one collection
- D. One site that contains a collection for each office

Correct Answer: D

QUESTION 3

You need to prepare for the migration of virtual machines across the Hyper-V hosts of Customer2.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Install the iSCSI Target Server role service on the Hyper-V hosts.	
From the Virtual Machine Manager console, add iSCSI arrays to the Hyper-V hosts.	
Install the Multipath I/O (MPIO) feature on the Hyper-V hosts.	
From the Virtual Machine Manager console, add disks to the Hyper-V hosts.	
From the Virtual Machine Manager console, assign a stored virtual machine path to the cloud of Customer2.	

Select and Place:

Actions	Answer Area
<p>Install the iSCSI Target Server role service on the Hyper-V hosts.</p> <p>From the Virtual Machine Manager console, add iSCSI arrays to the Hyper-V hosts.</p> <p>Install the Multipath I/C (MPIO) feature on the Hyper-V hosts.</p> <p>From the Virtual Machine Manager console, add disks to the Hyper-V hosts.</p> <p>From the Virtual Machine Manager console, assign a stored virtual machine path to the cloud of Customer2.</p>	<p>www.Pass4itSure.com</p>

Correct Answer:

Actions	Answer Area
<p>Install the iSCSI Target Server role service on the Hyper-V hosts.</p> <p>From the Virtual Machine Manager console, assign a stored virtual machine path to the cloud of Customer2.</p>	<p>Install the Multipath I/C (MPIO) feature on the Hyper-V hosts.</p> <p>From the Virtual Machine Manager console, add disks to the Hyper-V hosts.</p> <p>From the Virtual Machine Manager console, add iSCSI arrays to the Hyper-V hosts.</p>

QUESTION 4

Your network contains two clusters. The clusters are configured as shown in the following table.

Cluster name	Resource	Node
Cluster1	Hyper-V	3
Cluster2	Distributed File System (DFS)	5

All of the servers in both of the clusters run Windows Server 2012. You need to plan the application of Windows updates to the nodes in the cluster. What should you include in the plan? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Cluster-Aware Updating (CAU) self-updating and downloaded updates from Windows Server Update Services (WSUS)
- B. Microsoft System Center 2016 Service Manager integrated with Windows Server Update Service (WSUS)
- C. A manual application of Windows updates on all of the cluster node
- D. Microsoft System Center Configuration Manager (Current Branch) integrated with Windows Server Update Service (WSUS)

Correct Answer: A

QUESTION 5

Your network contains an Active Directory forest named contoso.com.

Your company works with a partner company that has an Active Directory forest named fabrikam.com. Both forests contain domain controllers that run only Windows Server 2012 R2.

The certification authority (CA) infrastructure of both companies is configured as shown in the following table.

Forest	Server name	Role
Contoso.com	Server1	Issuing enterprise root CA
Fabrikam.com	Server2	Offline root CA
Fabrikam.com	Server3	Enterprise issuing CA

You need to recommend a certificate solution that meets the following requirements:

Server authentication certificates issued from fabrikam.com must be trusted automatically by the computers in contoso.com.

The computers in contoso.com must not trust automatically any other type of certificates issued from the CA hierarchy in fabrikam.com.

What should you include in the recommendation?

- A. Deploy a Group Policy object (GPO) that defines intermediate CAs. Import a certificate that has an application policy object identifier (OID) of CA Encryption Certificate.
- B. Deploy a Group Policy object (GPO) that defines an enterprise trust. Import a certificate that has an application policy object identifier (OID) of Microsoft Trust List Signing.
- C. Deploy a Group Policy object (GPO) that defines an enterprise trust. Import a certificate that has an application policy object identifier (OID) of CA Encryption Certificate.
- D. Deploy a Group Policy object (GPO) that defines intermediate CAs. Import a certificate that has an application policy object identifier (OID) of Microsoft Trust List Signing.

Correct Answer: B
