**QUESTION 1**

Your network contains an Active Directory domain named adatum.com. The network contains two servers named CA1 and CA2 that runs Windows Server 2012. CA1 and CA2 have the Active Directory Certificate Services server role installed.

CA2 is configured as an offline standalone root certification authority (CA).

You configure CA1 as an enterprise subordinate CA.

You need to ensure that the certificate issued to CA1 is valid for 10 years.

What should you do first?

- A. Modify the registry on CA2.
- B. Modify the registry on CA1.
- C. Modify the CAPolicy.inf file on CA1.
- D. Modify the subordinate CA certificate template.
- E. Modify the CAPolicy.inf file on CA2.

Correct Answer: A

QUESTION 2

Your network contains a System Center 2012 R2 Virtual machine manager infrastructure. The infrastructure contains two Hyper-V hosts named Host1 and Host2. Host1 and Host2 are members of host group named HostGroup1.

You need to recommend a delegation solution to ensure that members of a group named VMAdmins can perform only the following tasks on Host2:

Start and stop virtual machines.

Create new virtual machines.

Manage virtual machines.

The solution must minimize the number of permissions assigned to VMAdmins.

What group or role should you use to delegate the permissions?

- A. a user role that is based on the Fabric Administrator (Delegated Administrator) profile
- B. a user role that is based on the Administrator profile
- C. The local Administrators group
- D. The local Hyper-V Administrators group

E. a user role that is based on the Application Administrator (Self-Service User) profile

Correct Answer: D

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains Server 2012 R2 and has the Hyper-V server role installed.

You need to log the amount of system resources used by each virtual machine.

What should you do?

- A. From Windows PowerShell, run the Enable-VMResourceMetering cmdlet.
- B. From Windows System Resource Manager, enable Accounting.
- C. From Windows System Resource Manager, add a resource allocation policy.
- D. From Windows PowerShell, run the Measure-VM cmdlet.

Correct Answer: A

The Enable-VMResourceMetering cmdlet collects resource utilization data for a virtual machine or resource pool.

QUESTION 4

You need to configure migration for HV-CLUSTER1. What should you do?

- A. Use live migration between HV-Cluster1 and HV-Cluster3.
- B. Configure a Hyper-V replica between HV-Cluster1 and HV-Cluster3.
- C. Configure a Hyper-V replica between HV-Cluster1 and HV-Cluster4.
- D. Use live migration between HV-Cluster1 and HV-Cluster4.

Correct Answer: C

QUESTION 5

You need to ensure that all new production Hyper-V virtual machines can be deployed correctly.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

- Create a new logical network.
- Select the **All Hosts** check box, and insert a VI AN with an ID of **30**.
- Add an uplink port profile.
- Create a new logical switch.
- Select the **All Hosts** check box, and insert a VI AN with an ID of **20**.
- Select the **All Hosts** check box, and insert a VLAN with an ID of **40**.
- Add a network site.

Answer Area

Correct Answer:

Actions

- Select the **All Hosts** check box, and insert a VI AN with an ID of **30**.
- Select the **All Hosts** check box, and insert a VI AN with an ID of **20**.
- Select the **All Hosts** check box, and insert a VLAN with an ID of **40**.
- Add a network site.

Answer Area

- Create a new logical network.
- Create a new logical switch.
- Add an uplink port profile.
