**QUESTION 1**

You publish App3 as a RemoteApp program.

You need to configure App3 to meet the application requirements.

What should you do?

- A. On the RD Session Host servers, modify the Windows Installer RDS Compatibility setting. On client computers, modify the Remote Desktop Connection settings.
- B. From Remote Desktop Services, modify the properties of the App3 RemoteApp program. On the client computers, configure the RemoteApp and Desktop Connection feed.
- C. From Remote Desktop Services, modify the properties of the collection to which the App3 RemoteApp program is published. On the client computers, configure the RemoteApp and Desktop Connection feed.
- D. From Remote Desktop Services, modify the properties of the collection to which the App3 RemoteApp program is published. On client computers, modify the Remote Desktop Connection settings.

Correct Answer: B

QUESTION 2

You are an enterprise administrator for your company, which is named Contoso, Ltd.

You plan to publish applications to virtual desktops by using Microsoft Application Virtualization (App-V) 5.0. You need to recommend a solution to prevent the virtual desktops from caching App-V 5.0 packages to disk.

What should you include in the recommendation?

- A. Dynamic Memory
- B. Non-uniform memory access (NUMA)
- C. A dynamic user configuration file
- D. Shared Content Store Mode

Correct Answer: D

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft Application Virtualization (App-V) 5.0 infrastructure. You package two complex applications named App1 and App2. You create a connection group that contains App1 and App2.

You discover that App2 overwrites some of the registry settings used by App1.

You need to recommend a solution for the deployment of App1 and App2 to meet the following requirements:

Prevent App2 from overwriting the registry settings of App1.

Ensure that App1 and App2 can share information.

What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Change the order of packages in the package library.
- B. Modify the PackageId of App1.
- C. Change the order of packages in the connection group.
- D. Create a single package that contains App1 and App2.
- E. Modify the VersionId of App1.

Correct Answer: C

<http://blogs.technet.com/b/appv/archive/2012/11/06/deploying-connection-groups-app-v-5-0.aspx> Note: The order of packages in the connection group is important. This determines the order in which the package contents are merged. So, in the following case, if there was a conflict (example: same registry value), the content of the "App1" package would be used.

QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain has Remote Desktop Services (RDS) deployed. A technician publishes 10 line-of-business applications and 10 productivity applications as RemoteApp programs.

You need to ensure that the RemoteApp programs are organized in two separate categories on the Remote Desktop Web Access (RD Web Access) site.

- A. The Web.config file of the RD Web Access site
- B. The Directory Browsing settings of the RD Web Access site
- C. The list of RemoteApp program folders in the properties of the RemoteApp programs
- D. The User Assignment settings of the RemoteApp programs

Correct Answer: C

QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains multiple servers that run Windows Server 2012. All of the servers run as virtual machines on Hyper-V hosts. The network contains a Remote Desktop Services (RDS) infrastructure. The infrastructure contains four servers. The servers are configured as shown in

the following table.

Server name	Role service
Server1	Remote Desktop Session Host
Server2	Remote Desktop Connection Broker
Server3	Remote Desktop Web Access
Server4	Remote Desktop Web Access

You publish a RemoteApp program named App1. App1 is accessed from client computers by using a web browser.

You need to recommend changes to the RDS infrastructure to meet the following requirements:

App1 must be available from a web browser if Server3 fails. The connection requests for App1 must be distributed evenly between Server3 and Server4.

What should you recommend adding to the RDS infrastructure?

- A. A replica of Server3 and Server4 on another Hyper-v host
- B. A Network Load Balancing (NLB) cluster that contains Server3 and Server4
- C. A failover cluster that contains Server3 and Server4
- D. An additional Remote Desktop Connection Broker (RD Connection Broker)

Correct Answer: B
