**QUESTION 1**

You have a server named Server1 that runs Windows Server 2012 R2.

You add an additional disk to Server1 as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that users can access the additional disk from drive C. What should you do?

- A. Convert Disk 0 and Disk 1 to dynamic disks and extend a volume.
- B. Convert Disk 1 to a dynamic disk and create a spanned volume.
- C. Create a simple volume on Disk 1 and mount the volume to a folder.
- D. Convert Disk 0 to a dynamic disk and add a mirror.

Correct Answer: C

**QUESTION 2**

Your role of Systems Administrator at ABC.com includes the management of the company\\'s data center. The data center includes 300 servers running Windows Server 2012 and many iSCSI SANs (Storage Area Networks).

All servers include an iSCSI initiator and use iSCSI storage. Due to the large number of SANs, it can be difficult to

locate available storage on the network. You need to improve iSCSI target discovery functionality for the iSCSI initiators on the network.

Which of the following provides a dynamic database of the iSCSI devices and related information that are currently available on the network?

- A. Server for NFS
- B. DNS Server
- C. iSNS Server
- D. iSCSI Target Storage Provider

Correct Answer: C

---

### QUESTION 3

A network technician installs Windows Server 2012 Standard on a server named Server1.

A corporate policy states that all servers must run Windows Server 2012 Enterprise.

You need to ensure that Server1 complies with the corporate policy.

You want to achieve this goal by using the minimum amount of administrative effort.

What should you perform?

- A. offline servicing by using Dism
- B. an upgrade installation of Windows Server 2012
- C. a clean installation of Windows Server 2012
- D. online servicing by using Dism

Correct Answer: D

- A. Not least effort
- B. Not least effort
- C. `dism /online /set-edition`
- D. offline would be less ideal and more workex: `DISM /online /Set-Edition:ServerEnterprise /ProductKey:489J6-VHDMP-X63PK-3K798-CPX3Y`Windows Server 2008 R2/2012 contains a command-line utility called DISM (Deployment Image

Servicing and Management tool). This tool has many features, but one of those features is the ability to upgrade the edition of Windows in use. Note that this process is for upgrades only and is irreversible. You cannot set a Windows image to

a lower edition. The lowest edition will not appear when you run the `/Get-TargetEditions` option. If the server is running an evaluation version of Windows Server 2012 R2 Standard or Windows Server 2012 R2Datacenter, you can convert it to

a retail version as follows:

If the server is a domain controller, you cannot convert it to a retail version. In this case, install an additional domain controller on a server that runs a retail version and remove AD DS from the domain controller that runs on the evaluation

version.

From an elevated command prompt, determine the current edition name with the command DISM /online /Get-CurrentEdition. Make note of the edition ID, an abbreviated form of the edition name.

Then run DISM /online /Set-Edition: /ProductKey:XXXXXXXXXX

-XXXXX-XXXXX-XXXXX /AcceptEula, providing the edition ID and a retail product key.

The server will restart twice.

#### QUESTION 4

Complete the missing word from the sentence below that is describing one of the new roles in Server 2012:

By using \_\_\_\_\_, you can augment an organization's security strategy by protecting information through persistent usage policies, which remain with the information, no matter where it is moved.

- A. ADFS
- B. RODC
- C. AD LDS
- D. AD RMS

Correct Answer: D

---

#### QUESTION 5

You have a server named Server1 that runs Windows Server 2012 R2.

You install the File and Storage Services server role on Server1.

From Windows Explorer, you view the properties of a folder named Folder1 and you discover that the Classification tab is missing.

You need to ensure that you can assign classifications to Folder1 from Windows Explorer manually.

What should you do?

- A. Install the File Server Resource Manager role service.
- B. From Folder Options, clear Hide protected operating system files (Recommended).
- C. Install the Share and Storage Management Tools.
- D. From Folder Options, select the Always show menus.

Correct Answer: A

Classification Management is a feature of FSRM
