The solution must minimize the number of permissions assigned to User1.

Server1 and Server2 are nodes in a Hyper-V cluster named Cluster1. Cluster1 hosts 10 virtual machines. All of the virtual machines run Windows Server 2012 R2 and are members of the domain.

You need to ensure that the first time a service named Service1 fails on a virtual machine, the virtual machine is moved to a different node.

You configure Service1 to be monitored from Failover Cluster Manager.

What should you configure on the virtual machine?

- A. From the General settings, modify the Startup type.
- B. From the Recovery settings of Service1, set the First failure recovery action to Take No Action.
