-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

You administer a SQL Server 2008 instance. You use an internal application based on SQL Server 2008. The application uses Analysis Services and Reporting Services. Company security policy requires that the surface area for all the deployed components of SQL Server 2008 be configured. You need to implement the security policy and devise a method to evaluate the security policy against other database servers. What should you do?

- A. Edit the RSReportServer.config configuration file. Distribute the file to all database servers that need to be configured.
- B. Use the SQL Server Best Practices Analyzer (BPA) to analyze your database servers. Implement the recommendations of the BPA
- C. Create policies based on the appropriate facets. Apply the policies against a server group that includes the database servers that need to be configured.
- D. Create a Transact-SQL script based on the sp_configure stored procedure. Use a configuration server to run the script against a server group that includes the database servers that need to be configured.

Correct Answer: C

QUESTION 2

You administer a SQL Server 2008 instance. You configure a single Database Mail profile that is used to send reports to all the employees of your organization. The sp_send_dbmail stored procedure is used to send a large volume of reports during business hours. The reports to the manager take a long time to be delivered. You need to ensure that the reports to the manager are sent as quickly as possible. What should you do?

- A. Add another SMTP account to the existing Database Mail profile.
- B. Configure a new Database Mail profile to be used for the reports to the manager.
- C. Use the @importance = high parameter when you send the reports to the manager.
- D. Change the Account Retry Attempts option of the Database Mail system properties.

Correct Answer: B

QUESTION 3

You administer a SQL Server 2008 instance. You need to find out the number of users who access the SQL Server instance by using Windows System Monitor. Which performance object should you capture?

- A. SQLServer:Exec Statistics
- B. SQLServer:Buffer Manager

- C. SQLServer:Access Methods
- D. SQLServer:General Statistics

Correct Answer: D

QUESTION 4

You administer a SQL Server 2008 instance that contains a database named DB1. DB1 contains a table named Table1. The DB1 database includes a stored procedure named Procedure1. Procedure1 uses a `sp_executesql` Transact-SQL statement to select data from Table1. According to business requirements, users are not allowed to access tables directly in any database. When a user executes Procedure1, the following exception is raised:

```
"Msg 229, Level 14, State 5, Line 1
```

```
The SELECT permission was denied on the object '\\Table1\\', database '\\DB1\\', schema '\\dbo\\'." You need to ensure that the user can successfully execute Procedure1 without violating the business requirements.
```

What should you do?

- A. Execute the `GRANT SELECT ON dbo.Table1 TO User1` Transact-SQL statement.
- B. Execute the `GRANT EXECUTE ON dbo.Procedure1 TO User1` Transact-SQL statement.
- C. Alter Procedure1 and add the `WITH EXECUTE AS OWNER` option to its header.
- D. Alter Procedure1 and add the `EXECUTE AS USER = '\\dbo\\'` option immediately before the call to the `sp_executesql` stored procedure.

Correct Answer: C

QUESTION 5

You administer a SQL Server 2008 instance. You have a stored procedure that implements a database maintenance process. You need to create a SQL Server Agent job that runs the stored procedure. You also need to ensure that the job is removed after successful completion. What should you do?

- A. Create a job that is scheduled to run once.
- B. Create a job that uses the Automatically delete job option.
- C. Create a job that is assigned to the Database Maintenance category.
- D. Create an Alert that will be raised when the job completes. This Alert will run another job to delete the maintenance job.

Correct Answer: B
