**QUESTION 1**

You need to identify the most appropriate archiving strategy for the SalesData.Orders table in the Sales database. The archiving strategy must have the minimum impact on performance. What should you do?

- A. Create a table named ArchivedData.Orders. Partition the SalesData.Orders table and its indexes, and use MERGE, SPLIT, and SWITCH functions every three months to move old order data into ArchivedData.Orders.
- B. Create a table named ArchivedData.Orders. Every three months use an INSERT statement to copy data from the SalesData.Orders table into ArchivedData.Orders, and then use a DELETE statement to remove archived data from SalesData.Orders.
- C. Create a database snapshot of the Sales database every three months, and then use a DELETE statement to remove archived data from the SalesData.Orders table.
- D. Back up the Sales database to tape every three months, and then use a DELETE statement to remove archived data from the SalesData.Orders table.

Correct Answer: A

---

**QUESTION 2**

Drag Drop question

**A. Datum Corporation**

You need to specify the procedure for implementing cryptographic functionality in the **HRData** database.

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area, and arrange them in the correct order.

List of Actions	Answer Area
Grant the ALTER ANY SYMMETRIC KEY permission to the HRApp user.	
Create a certificate that is owned by the HRApp user.	
Create a master key.	
Create two stored procedures that use the certificate to open the symmetric key. Have one of them encrypt the data with the symmetric key, and have the other decrypt the data with the symmetric key.	
Create a symmetric key that is owned by the HRApp user and encrypted with the certificate.	
Create a stored procedure that encrypts the data with the certificate, and create another stored procedure that decrypts the data with the certificate.	

Correct Answer:

**A. Datum Corporation**

You need to specify the procedure for implementing cryptographic functionality in the **HRData** database.

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area, and arrange them in the correct order.

**List of Actions**

Grant the ALTER ANY SYMMETRIC KEY permission to the HRApp user.

Create a stored procedure that encrypts the data with the certificate, and create another stored procedure that decrypts the data with the certificate.

**Answer Area**

Create a symmetric key that is owned by the HRApp user and encrypted with the certificate.

Create two stored procedures that use the certificate to open the symmetric key. Have one of them encrypt the data with the symmetric key, and have the other decrypt the data with the symmetric key.

Create a certificate that is owned by the HRApp user.

Create a master key.

**QUESTION 3**

You need to implement a high-availability solution for SQL6 and SQL7, fulfilling the availability requirements at the minimum expense. What should you do?

- A. Use log shipping.
- B. Use database mirroring.
- C. Use a three-node failover cluster.
- D. Use a four-node failover cluster.

Correct Answer: C

**QUESTION 4**

You are a database administrator for Company.com. One of the databases on a SQL Server 2005 computer contains a stored procedure. Users run this stored procedure to import data into a table. The stored procedure needs to use the

TRUNCATE TABLE command before importing new data into the table. However, the users who run the stored procedure do not have permission to truncate the table. You need to provide a way for the stored procedure to truncate the table before it imports new data.

What should you do?

- A. Configure the stored procedure to use the EXECUTE AS command.
- B. Configure the stored procedure to be owned by the same database user as the table.
- C. Assign the users DELETE permission in the table.
- D. Add the users to the db\_datawriter fixed database role.

Correct Answer: A

---

#### QUESTION 5

You are a database administrator for your company. You administer a SQL Server 2005 computer that contains a database named Customers. The database includes a table named CustInfo. The table includes an identity column named CustID and an nvarchar column named CustName. Company policy requires that rows containing duplicate CustName values be removed from the CustInfo table once each year. However, rows cannot be removed from the CustInfo table until they have been manually examined and verified as being duplicates. You need to provide a way to identify potential duplicate rows for manual examination. You need to accomplish this goal by using the least amount of administrative effort.

What should you do?

- A. Create a trigger for the CustInfo table that rolls back INSERT queries that contain duplicate data.
- B. Use a SELECT INTO query that includes GROUP BY and HAVING clauses to create a new table that contains duplicate rows from the CustInfo table.
- C. Create a new unique index on the CustName column. Specify IGNORE\_DUP\_KEY = ON when creating index.
- D. On the CustName column, create a foreign key constraint that references a distinct list of CustName values.

Correct Answer: B
