**QUESTION 1**

You are a database developer. You plan to design a database solution by using SQL Server 2008. The database contains a large table that is infrequently updated. Users execute a query against the table. The query requires the execution of

a complex calculation that involves multiple columns for a given row. You discover that the query performance is poor because the query is CPU intensive.

You need to reduce the effect of this query on the server.

What should you do?

- A. Create a computed column on the table.
- B. Create a persisted computed column on the table.
- C. Create an index on each field used by the calculation.
- D. Create a view on the table that includes the calculation.

Correct Answer: B

QUESTION 2

You are a database developer. You plan to create a database by using SQL Server 2008. The database will store information about students, teachers, classes, and rooms in a school. The database will be used by a scheduling application.

In the design plan, the following facts have to be considered:

You identify the following entities for the database design:

You need to design the database to ensure normalization. What should you do?

- A. 1. Add a new entity named TeachersStudents. 2. Establish a relationship between the Teachers and Students entities by using the TeachersStudents entity.
- B. 1. Add a new entity named ClassesRooms. 2. Establish a relationship between the Classes and Rooms entities by using the ClassesRooms entity.
- C. 1. Add a new entity named TeachersRooms. 2. Establish a relationship between the Teachers and Rooms entities by using the TeachersRooms entity.
- D. 1. Create a new entity named StudentsRooms. 2. Establish a relationship between the Students and Rooms entities by using the StudentsRooms entity.

Correct Answer: B

**QUESTION 3**

You plan to deploy a new application.

The application will perform the following operations:

You need to configure a login to support the deployment of the new application. The solution must ensure that the application uses the most restrictive permissions possible.

What should you do?

- A. Add the login to the sysadmin server role.
- B. Add the login to the dbcreator and securityadmin server roles.
- C. Add the login to the diskadmin and securityadmin server roles. Once the database is created, add a user to the db_backupoperator database role.
- D. Add the login to the diskadmin and serveradmin server roles. Once the database is created, add a user to the db_backupoperator database role.

Correct Answer: B

QUESTION 4

You have an instance of SQL Server 2008 that has xp_cmdshell enabled. You need to design a stored procedure that meets the following requirements: What should you include in the design?

- A. Grant users permission to execute xp_cmdshell.
- B. Grant users permission to execute sp_configure.
- C. Create a procedure that uses EXECUTE AS OWNER. Call xp_cmdshell in the procedure. Grant users permission to execute the procedure.
- D. Create a procedure that uses EXECUTE AS CALLER. Call xp_cmdshell in the procedure. Grant users permission to execute the procedure.

Correct Answer: C

QUESTION 5

You plan to implement a Web-based application that will save XML data to a column in a table.

You need to design a query that ensures that before saving the XML data to the table, the data contains valid elements. The solution must be developed by using the minimum amount of effort.

What should you include in the query?

- A. .exist()
- B. .query()
- C. FOR XML PATH
- D. sp_xml_preparedocument

Correct Answer: A
