**QUESTION 1**

You are a database developer. You plan to design a database solution by using SQL Server 2008.

A database contains a table named Employee_Vacation.

You are given an updated list of employee vacations used. The list is in an XML formatted file. The extract of the XML format is written in the following manner.

You plan to import the data and update the Employee_Vacation table. You design a query to calculate the number of vacation days used by each employee.

You need to ensure that vacation days are accurately counted for each employee.

What should you do?

- A. Use an XQuery expression along with the LET clause and the count function. Return the count in XML format.
- B. Use an XML index. Aggregate the number of vacation days for each employee, and then return the total count in XML format.
- C. Use the OPENXML function to convert XML data into a standard table format. Execute the Transact-SQL count function on the vacation days, and then return the count in XML format.
- D. Use an XQuery expression to write the information from XML format to a SQL Server table. Aggregate the number of vacation days from the tables, and then return the count in XML format.

Correct Answer: A

QUESTION 2

You are a database developer. You plan to design a database solution by using SQL Server 2008.

A stored procedure uses the INSERT, UPDATE, and DELETE statements separately to load data into a table. You need to rewrite the stored procedure to use a single statement to load the data.

What should you do?

- A. Write a MERGE statement by using a WHEN MATCHED clause and a WHEN NOT MATCHED BY TARGET clause.
- B. Write a MERGE statement by using a WHEN MATCHED clause and a WHEN NOT MATCHED BY SOURCE clause.
- C. Write a MERGE statement by using a WHEN MATCHED clause, a WHEN NOT MATCHED BY TARGET clause, and a WHEN NOT MATCHED BY SOURCE clause.
- D. Write a MERGE statement by using a WHEN MATCHED clause and two WHEN NOT MATCHED BY SOURCE clauses.

Correct Answer: C

QUESTION 3

You are designing a database that will store telephone numbers. You need to ensure that only phone numbers that use a specific format are written to the database. What should you create?

- A. a CHECK constraint
- B. a computed column
- C. a DEFAULT constraint
- D. a persisted computed column

Correct Answer: A

QUESTION 4

You are designing a data storage solution for a transactional application. You need to ensure that each row in a table records the date and the time that the row was written. The time must be as precise as possible. Which data type should you use?

- A. datetime
- B. datetime2
- C. smalldatetime
- D. timestamp

Correct Answer: B

QUESTION 5

You need to develop a stored procedure strategy that will manipulate temporary result sets to meet the following requirements:

The result sets will contain less than 1,000 rows.

What should you use?

- A. a common table expression (CTE)
- B. a view
- C. a user-defined table type
- D. a scalar function

Correct Answer: C
