QUESTION 1

You administer several Microsoft SQL Server 2012 database servers. Merge replication has been configured for an application that is distributed across offices throughout a wide area network (WAN).

Many of the tables involved in replication use the XML and varchar (max) data types. Occasionally, merge replication fails due to timeout errors.

You need to reduce the occurrence of these timeout errors. What should you do?

A. Set the Merge agent on the problem subscribers to use the slow link agent profile.

B. Create a snapshot publication, and reconfigure the problem subscribers to use the snapshot publication.

C. Change the Merge agent on the problem subscribers to run continuously.

D. Set the Remote Connection Timeout on the Publisher to 0.

Correct Answer: A

QUESTION 2

You administer a Microsoft SQL Server 2012 failover cluster that contains two nodes named Node A and Node B. A single instance of SQL Server is installed on the cluster.

An additional node named Node C has been added to the existing cluster. You need to ensure that the SQL Server instance can use all nodes of the cluster.

What should you do?

A. Create a ConfigurationFile.ini file from Node B, and then run the AddNode command-line tool on Node

B. Use Node A to install SQL Server on Node

C. Run the Add Node to SQL Server Failover Cluster Wizard on Node

D. Use Cluster Administrator to add a new Resource Group to Node

Correct Answer: C

QUESTION 3

You develop a database for a travel application. You need to design tables and other database objects. You create the Airline_Schedules table.

You need to store the departure and arrival dates and times of flights along with time zone information.

What should you do?

A. Add a HASH hint to the query.

B. Add a LOOP hint to the query.

C. Add a FORCESEEK hint to the query.

D. Add an INCLUDE clause to the index.

E. Add a FORCESCAN hint to the Attach query.

F. Add a columnstore index to cover the query.

G. Enable the optimize for ad hoc workloads option.

H. Cover the unique clustered index with a columnstore index.

I. Include a SET FORCEPLAN ON statement before you run the query.

J. Include a SET STATISTICS PROFILE ON statement before you run the query.

Correct Answer: I

QUESTION 4

You administer all the deployments of Microsoft SQL Server 2012 in your company. You have two servers in the same data center that hosts your production database.

You need to ensure that the database remains available if a catastrophic server failure or a disk failure occurs. You also need to maintain transactional consistency of the data across both servers. You need to achieve these goals without manual intervention.

Which configuration should you use?

A. · Two servers configured in a Windows Failover Cluster in the same data center · SQL Server configured as a clustered instance

B. · SQL Server that includes an application database configured to perform transactional replication

C. · Two servers configured in the same data center · A primary server configured to perform log-shipping every 10 minutes · A backup server configured as a warm standby

D. · Two servers configured in different data centers · SQL Server Availability Group configured in Synchronous-Commit Availability Mode · One server configured as an Active Secondary

E. · Two servers configured in the same data center · SQL Server Availability Group configured in Asynchronous-Commit Availability Mode · One server configured as an Active Secondary

F. · Two servers configured in different data centers · SQL Server Availability Group configured in Asynchronous-Commit Availability Mode

G. · SQL Server that includes an application database configured to perform snapshot replication

H. · Two servers configured on the same subnet · SQL Server Availability Group configured in Synchronous-Commit

Availability Mode

Correct Answer: H

QUESTION 5

You develop a database application for a university.

You need to create a view that will be indexed that meets the following requirements:

Displays the details of only students from Canada.

Allows insertion of details of only students from Canada.

Which four Transact-SQL statements should you use? (To answer, move the appropriate SQL statements from the list of statements to the answer area and arrange them in the correct order.)

Select and Place:

```
WITH ENCRYPTION

WITH CHECK OPTION

WITH SCHEMABINDING

WITH VIEW_METADATA

CREATE VIEW dbo.CanadianStudents

CREATE INDEXED VIEW dbo.CanadianStudents

AS
SELECT s.LastName, s.FirstName, s.JobTitle,
a.Country, e.LastQualification
FROM Student s
INNER JOIN NativeAddress a ON a.AddressID =
s.AddressID
INNER JOIN EducationHistory e ON s.StudentID =
e.StudentID
WHERE a.Country = 'Canada'
```

Correct Answer:

WITH ENCRYPTION		CREATE VIEW dbo.CanadianStudents
		WITH SCHEMABINDING
WITH VIEW_METADATA		AS SELECT s.LastName, s.FirstName, s.JobTitle, a.Country, e.LastQualification FROM Student s INNER JOIN NativeAddress a ON a.AddressID = s.AddressID INNER JOIN EducationHistory e ON s.StudentID = e.StudentID WHERE a.Country = 'Canada'
CREATE INDEXED VIEW dbo.CanadianStudents		
		WITH CHECK OPTION
