-  **800,000+** Satisfied Customers

**QUESTION 1**

You work as a database developer at ABC.com. The ABC.com network consists of a single domain named ABC.com. ABC.com makes use of Microsoft SQL Server 2012 in their environment.

You are in the process of creating a SQL Server Integration Services (SSIS) package. You have decided to make use of Expression Task.

Which of the following is TRUE with regards to Expression Task?

- A. It creates and evaluates expressions that set variable values at runtime.
- B. It provides code to perform functions that are not available in the built-in tasks and transformations that SQL Server Integration Services provides.
- C. It runs an application or batch file as part of a SQL Server Integration Services package workflow.
- D. It allows you to run SQL statements during package execution.

Correct Answer: A

---

**QUESTION 2**

In your SSIS solution, you need to load a large set of rows into the database as quickly as possible.

The rows are stored in a delimited text file, and only one source column needs its data type converted from String (used by the source column) to Decimal (used by the destination column).

What control flow task would be most suitable for this operation?

- A. The File System task would be perfect in this case, because it can read data from files and can be configured to handle data type conversions.
- B. The Bulk Insert task would be the most appropriate, because it is the quickest and can handle data type conversions.
- C. The data flow task would have to be used, because the data needs to be transformed before it can be loaded into the table.
- D. No single control flow task can be used for this operation, because the data needs to be extracted from the source file, transformed, and then loaded into the destination table. At least three different tasks would have to be used--the Bulk Insert task to load the data into a staging database, a Data Conversion task to convert the data appropriately, and finally, an Execute SQL task to merge the transformed data with existing destination data.

Correct Answer: C

---

**QUESTION 3**

You are developing a SQL Server Integration Services (SSIS) package to load data into a data warehouse.

You need to establish the correct order for loading each table to maximize parallel processing.

Which order should you use?

- A. 1. DimCurrency, DimScenario, DimAccount in parallel
  - 2. DimOrganization
  - 3. FactFinance
- B. 1. DimCurrency, DimOrganization in parallel
  - 2. DimScenario, DimAccount in parallel
  - 3. FactFinance
- C. 1. DimCurrency, FactFinance in parallel
  - 2. DimOrganization, DimScenario, DimAccount in parallel
  - 3. DimCurrency
- D. 1. FactFinance
  - 2. DimOrganization, DimScenario, DimAccount in parallel
  - 3. DimCurrency
- E. 1. DimCurrency

2.

DimOrganization

3.

DimScenario, DimAccount in parallel

4.

FactFinance

Correct Answer: A

---

#### QUESTION 4

Occasionally a job that executes an existing SQL Server Integration Services (SSIS) package does not complete and nothing is processed.

You need to ensure that package logging occurs. Your solution must minimize deployment and development efforts.

What should you do?

- A. Create a reusable custom logging component.
- B. Use the gacutil command.
- C. Use the Project Deployment Wizard.
- D. Run the package by using the dtexec /rep /conn command.
- E. Add a data tap on the output of a component in the package data flow.
- F. Create an OnErrorevent handler.
- G. Use the dtutil /copy command.
- H. Deploy the package by using an msi file.
- I. Run the package by using the dtexec /dumperror /conn command.
- J. Run the package by using the dtexecui.exe utility and the SQL Log provider.
- K. Deploy the package to the Integration Services catalog by using dtutil and use SQL Server to store the configuration.

Correct Answer: J

**QUESTION 5**

You work as a senior database developer at ABC.com. The ABC.com network consists of a single domain named ABC.com. ABC.com makes use of Microsoft SQL Server 2012 in their environment. You are running a training exercise for ABC.com's database developers. You are currently discussing the transformations data flow component. You are highlighting the Pivot Transformation type. Which of the following is TRUE with regards to the Pivot Transformation type?

- A. It is used to obtain a randomly selected subset of an input dataset.
- B. It sorts input data in ascending or descending order and copies the sorted data to the transformation output.
- C. It makes a normalized data set into a less normalized but more compact version.
- D. It creates new column values by applying expressions to transformation input columns.
- E. It creates a sample data set by selecting a percentage of the transformation input rows.

Correct Answer: C
