-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

You have a server named Server1 that has 2 processors.

You plan to deploy multiple instances of SQL Server 2014 to Server1. Each instance will have multiple databases.

You need to recommend a method to allocate processor time to each database.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Resource Governor
- B. Max Degree of Parallelism
- C. Windows System Resource Manager (WSRM)
- D. Processor affinity

Correct Answer: A

SQL Server Resource Governor is a feature that you can use to manage SQL Server workload and system resource consumption. Resource Governor enables you to specify limits on the amount of CPU, physical IO, and memory that

incoming application requests can use.

Reference: Resource Governor

Incorrect:

D: PROCESS AFFINITY

Enables hardware threads to be associated with CPUs.

---

**QUESTION 2**

You are the administrator for a SQL Server 2014 instance that stores the data for an online transaction processing sales system.

The company takes full backups every week; differential backups on the days with no full backups; and hourly transaction backups. These backups are stored on a backup server in the company's data center. Every week, the company places the full backup on a tape and sends it to a third-party backup storage system.

The company is worried that a disaster might occur that could destroy their computer center and cause them to lose orders.

You need to determine the best method for providing the smallest amount of data loss and downtime without leasing or purchasing additional physical locations.

What should you do? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Set up SQL Server Always On with a SQL Azure database as a replica.

- B. Set up SQL Server Always On by using a SQL Server on a Windows Azure Virtual Machine.
- C. Put the differential backup on tape and send it to the third-party backup storage system.
- D. Use the Microsoft SQL Server Backup to Microsoft Windows Azure Tool to direct all backups to a different geographical location.

Correct Answer: D

SQL Server 2012 was the first version to provide the ability to back up databases to the Cloud, and SQL Server 2014 improves on the process.

Microsoft SQL Server Backup to Windows Azure Tool enables backup to Windows Azure Blob Storage and encrypts and compresses SQL Server backups stored locally or in the cloud.

### QUESTION 3

You need to recommend a feature to support your backup solution.

What should you include in the recommendation?

- A. Transparent Data Encryption (TDE)
- B. Column-level encryption
- C. An NTFS file permission
- D. A Secure Sockets Layer (SSL)

Correct Answer: A

\*

Scenario: - You must encrypt the backup files to meet regulatory compliance requirements. The encryption strategy must minimize changes to the databases and to the applications.

\*

Transparent data encryption (TDE) performs real-time I/O encryption and decryption of the data and log files. The encryption uses a database encryption key (DEK), which is stored in the database boot record for availability during recovery.

---

### QUESTION 4

You have an SQL Server 2014 instance named SQL1.

SQL1 creates error events in the Windows Application event log.

You need to recommend a solution that will run an application when SQL1 logs a specific error in the Application log.

Which SQL elements should you include in the recommendation? (Each correct answer presents part of the solution. Choose all that apply.)

- A. A policy
- B. A maintenance plan
- C. An alert
- D. A job
- E. A trigger

Correct Answer: DE

Use a trigger that starts a job which executes the application. Reference: <http://technet.microsoft.com/en-us/library/hh849759.aspx>

#### QUESTION 5

You plan to deploy a database by using SQL Server 2014.

Your company identifies the following requirements for the database:

The name of all stored procedures must start with "usp\_"always.

All distribution statistics must be updated daily.

You need to identify which feature must be used to meet each database requirement.

Which features should you identify? To answer, drag the appropriate feature to the correct database requirement in the answer area.

Select and Place: Select and Place:

Features	Answer Area
change data capture	The name of all stored procedures must start with "usp_"always. <span>Feature</span>
the CHECK constraint	All distribution statistics must be updated daily. <span>Feature</span>
Extended Event	
a maintenance plan	
Policy-Based Management	

Correct Answer:

Features	Answer Area	
change data capture	The name of all stored procedures must start with "usp_" always.	Policy-Based Management
the CHECK constraint	All distribution statistics must be updated daily.	a maintenance plan
Extended Event		

\* Policy-Based Management

Each Stored Procedure that are created and that will be created has to have prefix "USP\_".

\* Maintenance plans create a workflow of the tasks required to make sure that your database is optimized, regularly backed up, and free of inconsistencies.
