QUESTION 1

You have two servers named Data5 and Data6. Both servers have SQL Server installed. Both servers have a SQL Server Integration Services (SSIS) catalog. You are preparing a disaster recovery plan for a business intelligence (BI) solution. You need to ensure that the SSIS catalog from Data5 can be restored to Data6. What should you do on Data5?

A. Run sp_configure clr enabled\\', 1.

B. Run sp configure recovery interval\\', 0.

C. Back up the master database and its database.

D. Back up the SSISDB database and its master key.

Correct Answer: C

QUESTION 2

You need to configure package execution logging to meet the requirements. What should you do?

A. Configure logging in each ETL package to log the OnError, OnInformation, and Diagnostic events.

B. Set the SSIS catalog\\'s Server-wide Default Logging Level property to Performance. C set the SSIS catalog\\'s Server-wide Default Logging Level property to Basic.

C. Set the SSIS catalog\\'s Server-wide Default Logging Level property to Verbose.

D. Configure logging in each ETL package to log the OnError, OnPreExecute, and OnPostExecute events.

Correct Answer: B

QUESTION 3

You need to roll back the compatibility level of the Research database.

What should you do?

A. Restore a backup of the previous version of the database.

B. Use an ALTER DATABASE statement to set the compatibility option.

C. Change the CompatibilityLevel property in the XMLA script, and then execute the script.

D. In SQL Server Management Studio (SSMS), change the compatibility level in the database properties.

Correct Answer: A

QUESTION 4

DRAG DROP

You are designing a SQL Server Reporting Services (SSRS) solution.

A report project must access multiple SQL Server databases. Each database is on a different instance.

The databases have identical schema and security configurations.

You have the following requirements:

1.

The report must support subscriptions.

2.

Users must be able to select the host when running the report.

What should you doTo answer, drag the appropriate phrase or phrases from the list to the correct location or locations in the answer area. (Answer choices may be used once, more than once, or not all.)

Select and Place:

List	Answer Area
a shared dataset.	Create a [ ]
stored credentials.	Create a report parameter that displays available values of [ ]
integrated security.	Create [ ]
SQL Server data.	Configure the data source to use [ ]
SQL Server instances.	
data source in the report.	
an expression-based connection string.	
shared data source in the report	

Correct Answer:

List	Answer Area
a shared dataset.	Create a [data source in the report.]
[ ]	Create a report parameter that displays available values of [SQL Server instances.]
integrated security.	Create [an expression-based connection string.]
SQL Server data.	Configure the data source to use [stored credentials.]
[ ]	
[ ]	
shared data source in the report	

Note:

*

 To include data in a report, you must first createdata connections, also known asdata sources, and then create datasets.

*

 A data connection includes the data source type, connection information, and the type of credentials to use. There are two types of data sources: embedded and shared. An embedded data source is defined in the report and used only by that report (fits this scenario). A shared data source is defined independently from a report and can be used by multiple reports.

*

 Built-in data extensions include the following data connection types: Microsoft SQL Server Microsoft SQL Server Analysis Services Microsoft SharePoint List Windows Azure SQL Database Etc.

*

 Expression-based connection strings are evaluated at run time. For example, you can specify the data source as a parameter, include the parameter reference in the connection string, and allow the user to choose a data source for the report.

*

 Credentials You provide the credentials that are needed to access the data. The data source owner must have granted you the appropriate permissions to access both the data source and the specific data on the data source. Reference: Data Connections, Data Sources, and Connection Strings (SSRS)

QUESTION 5

You have a data warehouse named DW1.

An OLAP cube named Cube1 uses DW1 as its data source. Cube1 uses the MOLAP storage mode.

You create a SQL Server Integration Services (SSIS) package that updates DW1, and then processes Cube1. The package executes each day at 06:00.

You need to configure the storage settings of Cube1. The solution must ensure that aggregation processing is reduced as much as possible during cube querying.

What is the best storage setting you should you use for Cube1More than one answer choice may achieve the goal. Select the BEST answer.

A. Medium-latency MOLAP

B. Scheduled MOLAP

C. Low-latency MOLAP

D. Automatic MOLAP

Correct Answer: D
