QUESTION 1

You plan to deploy SQL Server 2012. You must create two tables named Table1 and Table2 that will have the following specifications:

Table1 will contain a date column named Column1 that will contain a null value approximately 80 percent of the time.

Table2 will contain a column named Column2 that is the product of two other columns in Table2.

Both Table1 and Table2 will contain more than 1 million rows.

You need to recommend which options must be defined for the columns. The solution must minimize the storage requirements for the tables. Which options should you recommend? To answer, drag the appropriate options to the correct column in the answer area.

Select and Place:

Options	Answer Area
Sparse	Column1 Option
Computed	Column2 Option
Persisted computed	

Correct Answer:

Options	Answer Area
	Column1 Sparse
	Column2 Computed
Persisted computed	

QUESTION 2

You use SQL Server 2014.

You need to create a single object that inserts a provided value into Table1, and then returns a count of the records in Table1.

Develop the solution by selecting and arranging the required code blocks in the correct order. You may not need all of the code blocks.

Select and Place:

Code Blocks	Answer Area
<code>END</code>	
<code>CREATE FUNCTION dbo.Func_Table1 @InsertWord Varchar (10), @Var1 int OUTPUT AS BEGIN</code>	
<code>CREATE FUNCTION dbo.Func_Table1 (@InsertWord Varchar (10)) Returns INT AS BEGIN</code>	
<code>CREATE PROCEDURE dbo.Spr_Table1 @InsertWord Varchar (10), @Var1 INT AS BEGIN</code>	
<code>Select @Var1 = count(*) from TABLE1</code>	
<code>Declare @Var1 INT</code>	
<code>CREATE PROCEDURE dbo.Spr_Table1 @InsertWord Varchar (10), @Var1 int OUTPUT AS BEGIN</code>	
<code>INSERT INTO TABLE1 (FIELD1) values (@InsertWord)</code>	

Correct Answer:

Code Blocks	Answer Area
<pre>CREATE FUNCTION dbo.Func_Table1 @InsertWord Varchar(10), @Var1 int OUTPUT AS BEGIN</pre>	<pre>CREATE PROCEDURE dbo.Spr_Table1 @InsertWord Varchar(10), @Var1 int OUTPUT AS BEGIN</pre>
<pre>CREATE FUNCTION dbo.Func_Table1 (@InsertWord Varchar(10)) Returns INT AS BEGIN</pre>	<pre>INSERT INTO TABLE1 (FIELD1) values (@InsertWord)</pre>
<pre>CREATE PROCEDURE dbo.Spr_Table1 @InsertWord Varchar(10), @Var1 INT AS BEGIN</pre>	<pre>Select @Var1 = count(*) from TABLE1</pre>
<pre>Declare @Var1 INT</pre>	<pre>END</pre>

QUESTION 3

You need to modify usp_SelectSpeakersByName to support server-side paging. The solution must minimize the amount of development effort required. What should you add to usp_SelectSpeakersByName?

- A. A table variable
- B. An OFFSET-FETCH clause
- C. The ROWNUMBER keyword
- D. A recursive common table expression

Correct Answer: B

QUESTION 4

You are troubleshooting an application that runs a query. The application frequently causes deadlocks.

You need to identify which transaction causes the deadlock.

What should you do?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Query the sys.dm_exec_sessions dynamic management view.

- B. Query the sys.dm_exec_requests dynamic management view.
- C. Create a trace in SQL Server Profiler that contains the Deadlock graph event
- D. Create an extended events session to capture deadlock information.

Correct Answer: D

Explanation: Troubleshooting deadlocks

You have been receiving reports from users indicating that certain applications are returning deadlock errors. To maximize the effectiveness of troubleshooting these problems, you decide to focus on the deadlocks that are hit most frequently.

You create an Extended Events session that:

/ Configures deadlock event tracking for the session. / Specifies a target that aggregates based on an identifier for the deadlock.

You run the Extended Events session, and after additional deadlocks are reported you are able to obtain aggregated deadlock information, along with the complete XML deadlock graph for each source. Using this information you are able to

pin point the most common deadlocks and start working on a solution.

Create an Extended Events Session

View Event Session Data

QUESTION 5

You need to resolve the performance issues of the usp_ExportOpenings stored procedure.

The solution must minimize the amount of hard disk space used.

Which statement should you execute on DB1?

- A. EXEC sp_dboption \\DB1\\, \\'auto create statistics\\', \\TRUE\\;
- B. CREATE INDEX IX_Exp_Openings ON Openings(PostDate, FilledDate) INCLUDE (Description, Title, Salary);
- C. CREATE INDEX IX_Exp_Openings ON Openings(PostDate) INCLUDE (Description, Title, Salary) WHERE FilledDate IS NULL;
- D. EXEC sp_recompile \\usp_ExportOpenings\\;

Correct Answer: C
