**QUESTION 1**

You are developing a SQL Server Analysis Services (SSAS) cube. The cube consists of a single measure group.

The measure group consists of one partition that uses MOLAP.

The proactive caching policy has the following requirements:

The cache must be updated when data is changed in the table named tblOrders.

Changes must be notified through the use of the XML for Analysis (XLA) NotifyTableChange command.

You need to configure the proactive caching policy to meet the requirements.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

On the **Partitions** tab, click **Storage Settings**.

Select the **SQL Server** notification type, and then select the **tblOrders** table.

Enable proactive caching.

Open the partition storage settings.

Select the **Update the cache periodically** option.

Select the **Client initiated** notification type, and then select the **tblOrders** table.

Correct Answer:

Select the **SQL Server** notification type, and then select the **tblOrders** table.

Open the partition storage settings.

Select the **Update the cache periodically** option.

On the **Partitions** tab, click **Storage Settings**.

Enable proactive caching.

Select the **Client initiated** notification type, and then select the **tblOrders** table.

**QUESTION 2**

A group of report writers develop reports. The report writers currently use Report Builder 1.0 and report models. The report writers are not trained on SQL Server query writing. Their report assignments come from various departments

within

the organization.

The company is upgrading to SQL Server 2012 with SQL Server Reporting Services (SSRS) in native mode. After the upgrade, reports will retrieve data from a large new data warehouse that will reside on an instance of the SQL Server 2012

Database Engine. Reports for each department will retrieve data from only a subset of the data warehouse tables.

You are designing the data access strategy. You have the following requirements:

Ensure that report writers can create only reports that display data which they have database permissions to view.

Minimize the effort required to update connection strings for all reports developed by the report writers.

Minimize the number of fields visible in a specific report for report writers who work for multiple departments.

You need to design the data access strategy.

What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.)

A. Create report models by using SQL Server Data Tools (SSDT). Include data sources and data source views for each department's data requirements. Configure each data source to use integrated security.

B. Create one shared data source that uses integrated security. Create an embedded dataset for each report.

C. Create one shared data source that uses integrated security. Create one shared dataset that includes all tables required by the report writers.

D. Create one shared data source that uses integrated security. Create a shared dataset for each department's data requirements.

Correct Answer: D

---

### QUESTION 3

You need to configure the partition storage settings to support the reporting requirements. Which partition storage setting should you use?

A. DirectQuery

B. In-Memory

C. MOLAP

D. Low-latency MOLAP

E. Scheduled MOLAP

F. High-latency MOLAP

Correct Answer: D

#### QUESTION 4

You are developing a SQL Server Analysis Services (SSAS) cube for the accounts department.

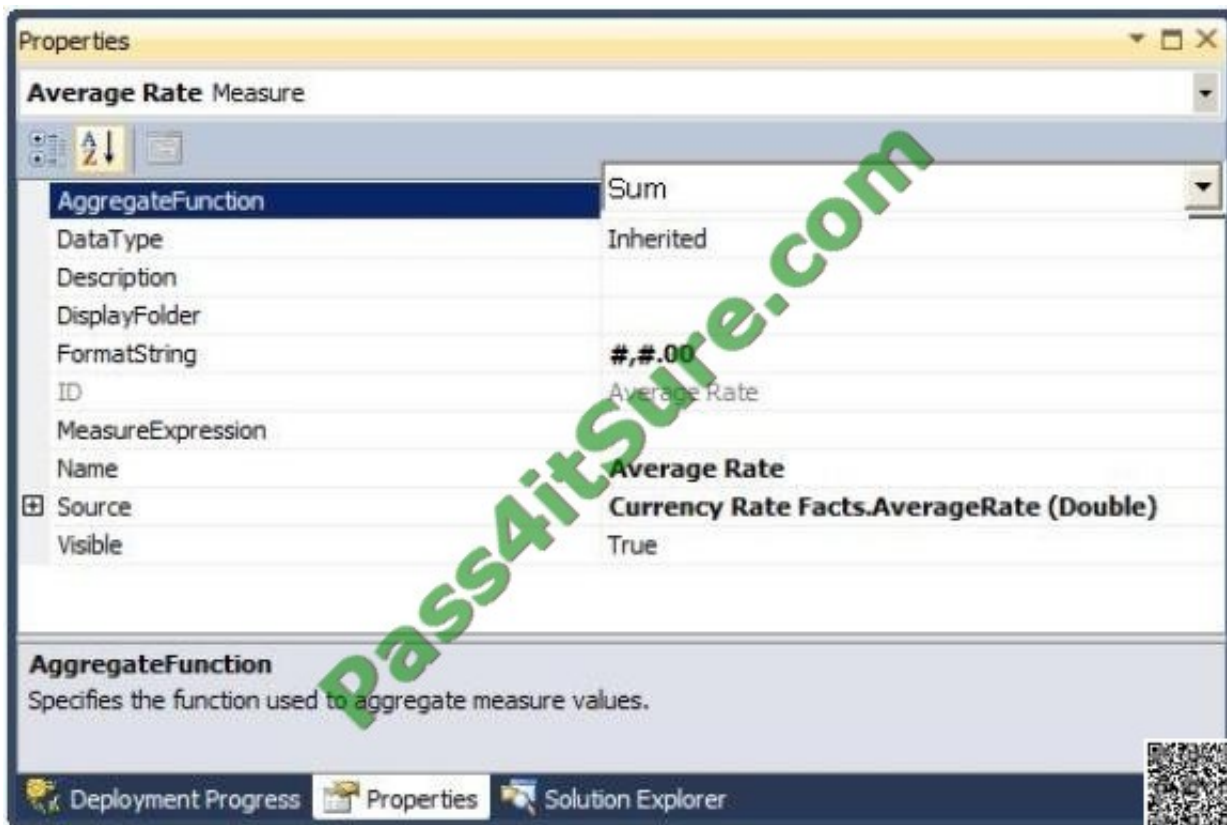

You create a measure group named Exchange Rate that consists of measures pertaining to currency exchange rates. One of the measures in this group is named Average Rate and it will be used to report the average currency exchange rate

over time.

Currently the AggregationFunction property for the Average Rate measure is set to Sum.

You need to ensure that Average Rate measure reports the average of the currency exchange rate over time.

Which value should you select for the AggregationFunction property for the Average Rate measure? To answer, select the appropriate setting in the answer area.

- A. AverageOfChildren
- B. ByAccount
- C. Count
- D. DistinctCount E. FirstChild
- F. FirstNonEmpty
- G. LastChild

H. LastNonEmpty

I. Max

J. Min

K. None

L. Sum

Correct Answer: A

Explanation: AverageOfChildren

Specifies average of leaf descendants in time. Average does not count an empty value as 0.

---

### QUESTION 5

You need to implement a strategy for efficiently storing sales order data in the data warehouse. What should you do?

- A. Separate the factOrders table into multiple tables, one for each month that has orders, and use a local partitioned view.
- B. Separate the factOrders table into multiple tables, one for each day that has orders, and use a local partitioned view.
- C. Create daily partitions in the factOrders table.
- D. Create monthly partitions in the factOrders table.

Correct Answer: C
