### QUESTION 1

You create a cloud-hosted SharePoint app.

You must make the app available in the SharePoint Store for customers to install on their host webs.

You need to keep the style and navigation of the app the same as the host web of the app after it is installed by any customer.

What should you do?

- A. Use an app template and an app.master master file for branding.
- B. Add a reference to SP.UI.Controls.js on the host web. Pass the AppUrl parameter to the host web. Apply branding to the host web.
- C. Add a reference to the SP.UI.Controls.js file located in the new /\_layouts/15 directory. Pass the HostUrl parameter to the start page of the app. Use the Chrome control in the HTML page in a declarative manner.
- D. Use a Chrome control to find the differences in the styles between the host web and the app. Resolve all of the differences by using JavaScript.

Correct Answer: C

Microsoft allows developers to import a very basic version of the SharePoint 2013 chrome into their apps without having to manually create matching HTML controls. The functionality for this can be found in the SP.UI.Controls.js file located in the new /\_layouts/15 directory. To use the chrome control, first add a reference to SP.UI.Controls.js (make sure you've already loaded the requisite JQuery files and other dependencies), then add an empty to your page markup at or near the top of the page.

### QUESTION 2

DRAG DROP

You need to apply the Design Package to all of the required sites.

How should you complete the relevant code? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to

drag the split bar between panes or scroll to view content.)

Select and Place:

The screenshot shows a VCE question interface. On the left, there is a list of options: LitwareIncTemplate#0, OSRV#0, FeatureTemplate, FeatureTemplateStapler, BLANKINTERNET#0, WTLitwareTeamSite, litware.teamsite.wt\_ID, FeatureWebTemplateAssociation, and FeatureSiteTemplateAssociation. On the right, the 'Answer Area' displays an XML snippet: `<?xml version="1.0" encoding="utf-8"?><Elements xmlns="https://schemas.microsoft.com/sharepoint/">< [ ] Id="11111111-8e74-4554-aa03-4373a812e5ac" TemplateName=" [ ] " /></Elements>`. The [ ] boxes are empty, indicating an incorrect answer.

Correct Answer:

The screenshot shows the same VCE question interface as above. In the 'Answer Area', the XML snippet is: `<?xml version="1.0" encoding="utf-8"?><Elements xmlns="https://schemas.microsoft.com/sharepoint/">< FeatureSiteTemplateAssociation Id="11111111-8e74-4554-aa03-4373a812e5ac" TemplateName=" BLANKINTERNET#0 " /></Elements>`. The 'FeatureSiteTemplateAssociation' element name and the 'BLANKINTERNET#0' value are highlighted in yellow, indicating the correct answer.

Box 1: FeatureSiteTemplateAssociation

FeatureSiteTemplateAssociation Element associates the specified Features with the specified site definition configuration so that when Web sites are provisioned, the Features are automatically included.

Box 2: BLANKINTERNET#0

Site template BLANKINTERNET#0:

Publishing sub-sites can be created under this site. A Document and Picture Library are included for storing Web publishing assets.

Reference: FeatureSiteTemplateAssociation Element (FeatureSiteTemplateAssociation); SharePoint 2010: Default Site Templates

### QUESTION 3

#### DRAG DROP

You need to ensure that the features required for the Litware Team Site web template are referenced correctly in the ONET.XML file.

How should you complete the relevant code? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

The screenshot shows an exam interface with a list of feature IDs on the left and an XML code editor on the right. The XML code is as follows:

```
<Configuration ID="0" Name="Default"
MasterUrl="_catalogs/masterpage/seattle.master">
  <SiteFeatures>
    <Feature ID=" " />
  </SiteFeatures>
  < " />
  <Feature ID=" " />
  < " />
</Configuration>
```

Correct Answer:

The screenshot shows the correct answer for the question. The feature IDs are correctly placed in the XML code editor as follows:

```
<Configuration ID="0" Name="Default"
MasterUrl="_catalogs/masterpage/seattle.master">
  <SiteFeatures>
    <Feature ID=" FDE5D850-671E-4143-950A-87B473922DC7 " />
  </SiteFeatures>
  < WebFeatures " />
  <Feature ID=" DBF805AB-03D9-43DC-9154-S2D6AC54689F " />
  < WebFeatures " />
</Configuration>
```

Scenario:

\* A web template based on the Team Site definition must be created. A three-state workflow must be used to manage business processes. A customized default home page must be deployed by using a site feature.

\* Feature IDs:

\* Three-state workflow: FDE5D850-671E-4143-950A-87B473922DC7

\* Litware Web Artifacts: DBF80SAB-03D9-43DC-9154-52D6AC54689F

#### QUESTION 4

The Contoso SharePoint on-premise intranet portal stores content in 50 site collections.

Contoso must display all content tagged with a metadata term on the main page of the portal.

You need to display all documents with the metadata term without using any custom code.

Which technology should you use?

A. Content Query Web Part (CQWP)

B. Content Search Web Part (CSWP)

C. TaxonomySession

D. CamlQuery

Correct Answer: B

CSWP can be configured to "see" items anywhere in SharePoint.

Incorrect:

Not A: CQWP and related SPSiteDataQuery can only search within the current site collection.

Not C: For TaxonomySession you would have to write code. Not D: The CamlQuery class just specifies a query on a list.

Reference: Using the Content Search web part (and understanding SP2013 search)

---

#### QUESTION 5

##### HOTSPOT

You develop a SharePoint-hosted app that is used by internal users to read and write data.

The app has the following requirements:

The app must be able to find and display the products that are purchased most often by customers.

The app must be able to read product information from a custom SQL Server database by using an external list.

The app must be able to read from and write to the user profile.

The app must be able to make changes to lists by using the minimum permissions necessary.

The app must be able to read enterprise keywords.

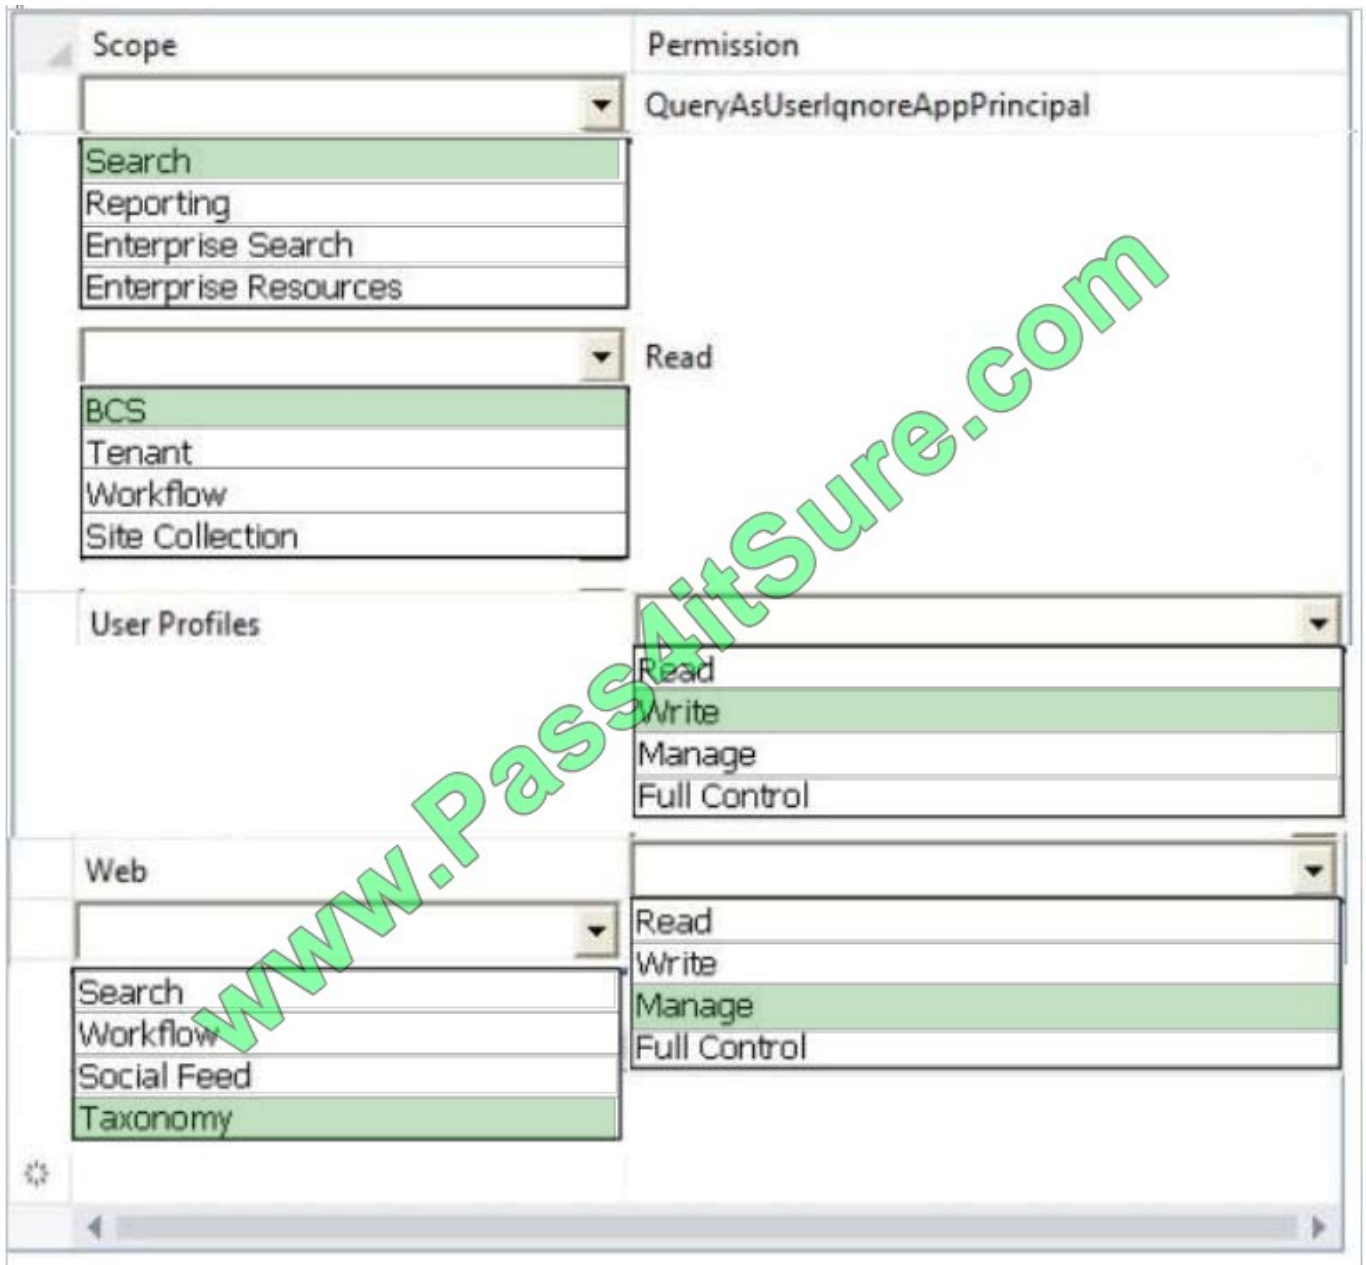

You need to configure permissions for the app.

Which scopes and permissions should you use? (To answer, select the appropriate options from each drop-down list in the answer area.)

Hot Area:

Scope	Permission
<input type="text"/>	QueryAsUserIgnoreAppPrincipal
<ul style="list-style-type: none"><li>Search</li><li>Reporting</li><li>Enterprise Search</li><li>Enterprise Resources</li></ul>	
<input type="text"/>	Read
<ul style="list-style-type: none"><li>BCS</li><li>Tenant</li><li>Workflow</li><li>Site Collection</li></ul>	
User Profiles	<input type="text"/>
	<ul style="list-style-type: none"><li>Read</li><li>Write</li><li>Manage</li><li>Full Control</li></ul>
Web	<input type="text"/>
<input type="text"/>	<ul style="list-style-type: none"><li>Read</li><li>Write</li><li>Manage</li><li>Full Control</li></ul>
<ul style="list-style-type: none"><li>Search</li><li>Workflow</li><li>Social Feed</li><li>Taxonomy</li></ul>	

Correct Answer:

Box 1: Search QueryAsUserIgnoreAppPrincipal To provide proper permissions to have search in SharePoint hosted app, open the Appmanifest.xml and provide the permissions to search as scope and select the permission "QueryAsUserIgnoreAppPrincipal".

Box 2: BCS Business Connectivity Services (BCS) need read as the app must be able to read product information from a custom SQL Server database by using an external list.

Box 3: Write User Profiles scope require write as the app must be able to read from and write to the user profile.

Box 4: Manage Web permissions should be manage as the app must be able to make changes to lists by using the minimum permissions necessary.

Box 5: Taxonomy For taxonomy, only rights for Read and Write are available. Here read is fine as the app must be able to read enterprise keywords
